✓

TO  
THE RIGHT HONOURABLE  
WILLIAM WYNDHAM GRENVILLE,  
LORD GRENVILLE,  
BARON GRENVILLE, OF WOTTON UNDER BERNEWOOD, IN  
THE COUNTY OF BUCKINGHAM;  
ONE OF HIS MAJESTY'S MOST HONOURABLE PRIVY COUNCIL,  
IN GREAT BRITAIN AND IRELAND;  
CHANCELLOR OF THE UNIVERSITY OF OXFORD; A TRUSTEE OF  
THE BRITISH MUSEUM; AND ALSO OF THE CHARTER-HOUSE;  
AND ONE OF THE ELDER BRETHREN OF THE TRINITY-HOUSE.

MY LORD,

WHEN I solicited the honour of inscribing this Work, with YOUR LORDSHIP'S NAME, I felt myself actuated by two inducements: by gratitude, because it is to your Lordship's influence, that I owe the means of sending it forth to the Public: and no less by a sense of propriety; for no one within the limits of my observation, is so well qualified to decide on its merits: such is your Lordship's extensive and intimate knowledge of the subject, which it professes

## DEDICATION.

to illustrate. So fully, indeed, am I impressed with this sentiment, that I have sometimes doubted the prudence of thus placing the imperfections of my Work, so near the eye of acute and judicious criticism. I venture, however, to hope, that as the *ANABASIS* is so deservedly a favourite subject with your Lordship, you will regard with indulgence, such errors as have arisen, in an attempt to render it an object still more worthy of your attention.

The Improvements made in the Geography of the Countries, connected with the present Work, have chiefly grown out of the labours of ingenious and enterprising Travellers of the present age; actuated, no doubt, by that spirit of emulation, inculcated by those magnificent plans of discovery, and of geographical improvement, which add splendour to the commencement of the reign of our *MOST AMIABLE, and MOST GRACIOUS SOVEREIGN*: and which have been continued and extended, until we have no longer any doubts, respecting the general distribution of the habitable parts of the terraqueous globe. Nor has *HIS MAJESTY*'s most gracious attention been

## DEDICATION.

confined to the more prominent features of discovery: since the geography of the tract in question, though a minor part of the great original design, was deemed worthy of HIS MAJESTY's most gracious and liberal aid; when submitted to his notice, by your Lordship's eminent zeal for the promotion and extension of knowledge and science, beneficial to humanity.

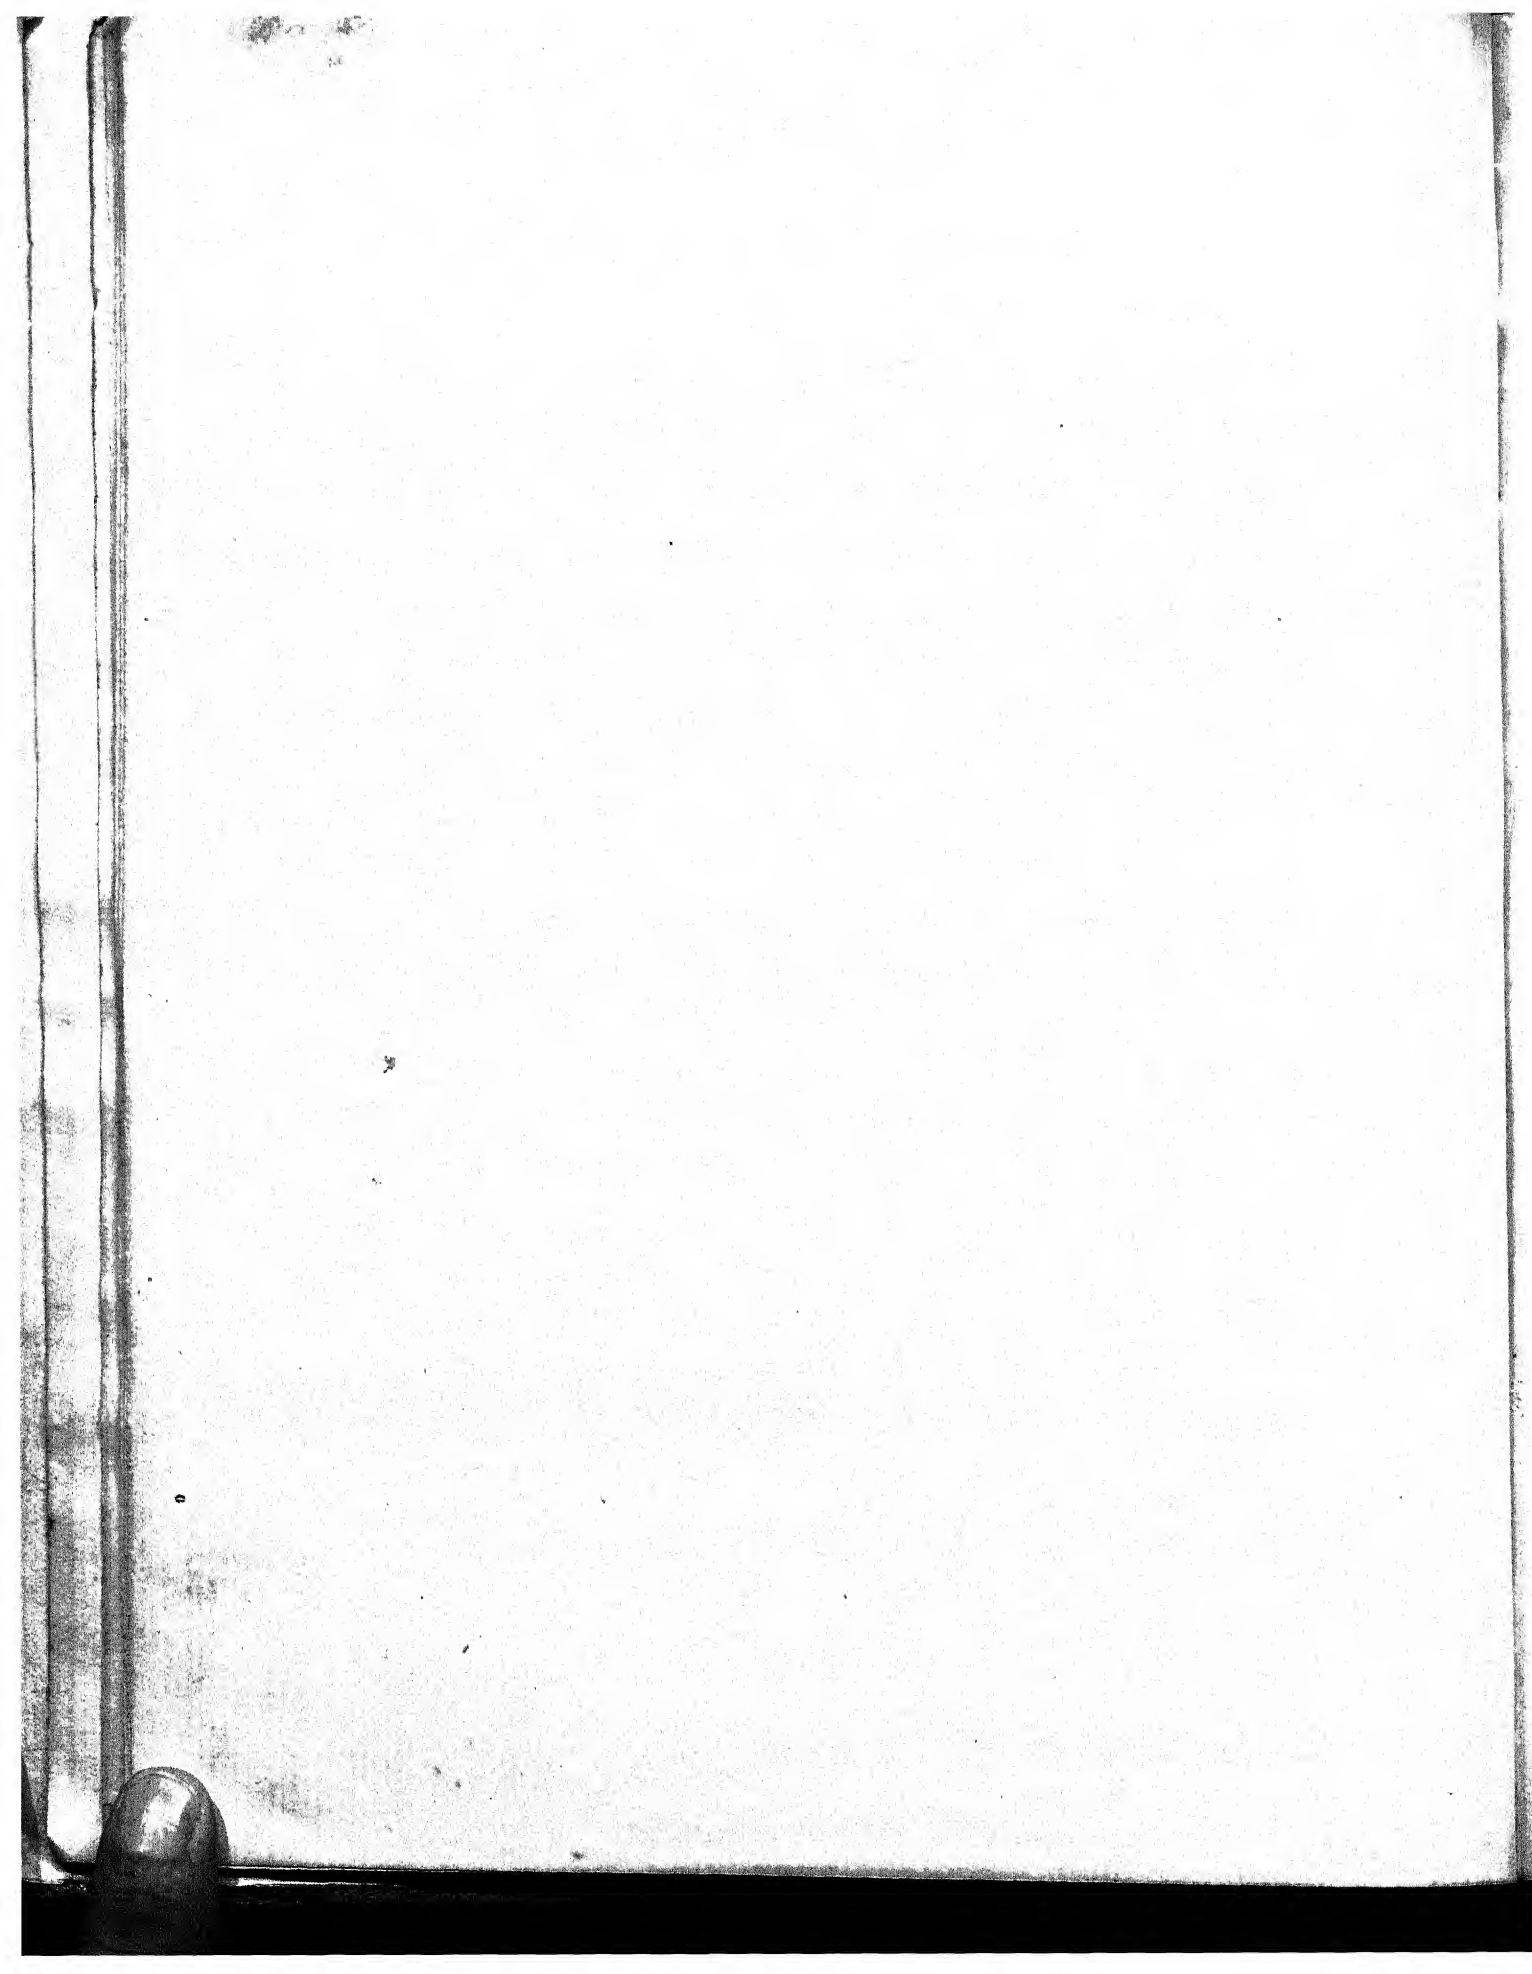

I am, with the greatest respect,

MY LORD,

Your Lordship's obliged,  
and faithful humble Servant,

J. RENNELL.

June 4, 1816.*

## P R E F A C E.

---

THE History of the EXPEDITION of CYRUS, and the RETREAT of the TEN THOUSAND, engaged very early, the attention of the author. But, at that period, the geography of Western Asia was so little known in detail, that only a few points, in the whole route of the Greeks, had been sufficiently ascertained. This is fully exemplified by the maps that are prefixed to the translations of Messrs. Spelman and Larcher; although that of the latter, is incomparably the best of the two. Nor is the one made by M. D'Anville, for M. Rollin's Ancient History, on the whole, superior, if equal, to that in M. Larcher's book.\*

In the history of an Expedition, in which the matter of the narrative, so mainly depends on the detail of its geography, the want of such a delineation as will serve to explain the several movements, not only renders the history in some places obscure,

\* The geography of Asia Minor, in particular, was extremely defective, down to the present times. M. D'Anville had contracted its breadth, so as to make it a whole degree of latitude less than the truth; which, of course, occasioned a derangement of the whole interior of it. And the countries, through which the route of the Ten Thousand lay, were worse described than the rest. Besides the mere consideration of latitude and longitude, the descriptive geography, in general, was extremely faulty; but which, however, is not to be placed to the account of want of judgment, in M. D'Anville; but to the deficiency of good materials.

but deprives the reader of a criterion, by which a trial might oftentimes be made, of its consistency and truth. But the *ANABASIS* was read, and its geographical details either taken for granted, or referred to fanciful delineations, made up from the text itself: that is, for want of the actual geography, a geography was *invented*; in order that the mind might have a sensible object to refer to, in the act of tracing the progress of the armies. So that this admirable piece of military history, not only lost a part of its value, through the want of proper explanations; but also failed to produce all the collateral advantages, that might have been derived from it, in respect of the improvement of ancient geography.

A reader of modern military history, would regard as very imperfect, a work which should be found deficient in the necessary details of geography. In books of travels, the defect would be felt still more.\* Now the *ANABASIS* combines with the character of a military history, that of a book of travels likewise; since more than seven months, out of the fourteen, that elapsed, between the time of the departure of the Greeks from *Sardis*,

\* Of this, we had a convincing proof, a very few years ago, in Mr. Patrick Gass's account of the Expedition for exploring the North American continent, in the line of the river Missouri; by the captains Lewis and Clarke: and to which account, not a scrap of tabular geography was annexed. But the account since published by authority, and now before the public, having the proper geographical details, proves how little this part of the subject had been understood, from the text of Mr. Gass's book.

This expedition, considered in respect of the extensive field, that it has already opened to human industry; and much more, as exploring ground, on which nations, yet unborn, are to be planted; (and which, although occupying the heart of a continent, will possess the means of a direct communication with the ocean); appears to be the most splendid of all the inland discoveries of modern times.

and their arrival at the port of embarkation, at *Cotyora*, were employed in the act of marching: in which they went over about 3200 British miles of ground; and that, not in *marching* and *counter-marching*, within the same country, as happens in ordinary campaigns; but generally in the act of advancing. Besides which distance, they afterwards went 500 miles more, to *Byzantium*; partly by navigating the Black Sea; partly by marching along its borders.

It will be no matter of surprise, that the present maps of the route of the Ten Thousand, should differ widely from all former ones; when it is considered, what very great improvements have been made, in the geography of Western Asia, during the latter parts of the last century, and the beginning of the present one: a period, perhaps, beyond all others, favorable to geography, in every quarter of the globe: since some of the greatest efforts of skill, as well as of courage and perseverance, have been combined with the best aids of science, and the most useful improvements in art; in order to procure materials for it.

The first dawn of hope, of improving the geography of the ANABASIS, by actual observations, appeared in consequence of an application made by the author, to the celebrated traveller, M. Niebuhr, in 1792; requesting some information relative to *Asia Minor*, and the passage of *Mount Taurus*. The answer, which was favourable beyond expectation, produced, amongst much other valuable information, a map of M. Niebuhr's route, through the southern parts of Asia Minor; laid down

from his own notes and remarks, and corrected in the latitudes by celestial observations.\* This route, for the most part, went over the same ground with that taken by the younger Cyrus and Xenophon : and although their route across Mount Taurus, was different from that taken by M. Niebuhr ; yet it appeared that this latter, was the one taken by Menon, on occasion of his escorting the Cilician Queen, to Tarsus. Again, the enquiries made by M. Niebuhr, produced some information respecting certain points, connected with the Route of Cyrus ; over the same chain of mountains. And besides this, much information was obtained respecting the Gulf of *Issus* and *Mount Amanus* ; and of the strait lying between them. These particulars, indeed, applied not only to the subject in hand, but also cleared up some doubts concerning the intricate subject of the *Passes of Cilicia and Syria*, in general ; applicable to the warfare between Alexander and Darius.

A second important document, intimately connected with the present subject, but relating to a different quarter ; appeared not long afterwards. This was a Journal, containing the observations of Mr. Sullivan,† along the eastern bank of the river Tigris, between Jezirah-ibn-Omar and Mosul : being a considerable portion of the ground, over which the Ten

\* This was an engraved copy of one of the maps, designed for a third volume of M. Niebuhr's Travels ; and which included his return home from Syria, through Asia Minor. But a fire, which broke out in the palace at Copenhagen, destroying all the copper plates intended for it, the work has never yet appeared.

† The Right Honourable John Sullivan, M. P. to whom the author is also indebted for various communications of the most useful kind.

Thousand marched, during the early, and most arduous part of their retreat, between the *Zabatus* river, and the *Carduchian* mountains. And, in fact, the 14 marches made by them, between these two points, in which they were unremittingly pursued, often surrounded, and sometimes way-laid, by the whole Persian force; constituted the whole of their warfare with the Persians, after the battle of *Cunaxa*; as they escaped from their attacks, at the end of these marches, by ascending the mountains in question. Mr. Sullivan's constant attention to the nature of the country, through which he passed, (and that, without any particular reference to the present subject; since his remarks were general); enables us, with great confidence, to fix the site of the *Battle on the Hills*; on the tenth march from the *Zabatus*: which not only forms a prominent feature, in that part of the history, but also furnishes a decided point of recognition, in the geography. The Abbé Sestini, who accompanied Mr. Sullivan, and Dr. Howell, (who traced the same ground at a different time,) afford some additional particulars; and confirm generally, the remainder.

The possession of such invaluable notices towards the illustration of the geography of the *ANABASIS*, encouraged the author to enquire after, and to search for, other notices. This produced a vast number of useful particulars; extremely various in their kinds, and originating from many different quarters; to recount which, would fill many pages. Some were obtained from living authorities; but many more from books of travels, and from the works of Arabian and Turkish

geographers ; as also from MS. maps and journals : and, in one remarkable instance, from Diodorus Siculus. The truth is, that useful notices sometimes exist, in the hands of travellers, who regard them as mere insulated facts, of too little importance, or use, to be placed on record ; although they sometimes prove indispensable links in a chain of authorities, for establishing a geographical system, or an historical connection. Others, although placed on record in books, were neglected, because it had not been discovered, that they had any bearing on, or connexion with, the subject. Thus, for instance, the country of the *Chaoi*, or *Chaonitis*, in Diodorus Siculus, may be recognized in that of *Khanoos*, or *Kanis*, a province of Armenia, described by Hajy Kalifa : and as such, by the aid of Mr. James Morier's observations, serves to point out the quarter, and almost the place, where the Ten Thousand crossed the Euphrates. But as these notices had never been *applied*, the position of that crossing place, has, in consequence, remained in utter uncertainty.

The oriental geographers, whose works have proved the most useful, not only in respect of the present subject, but of Western Asia generally, are ABU BEKIR BEN BEHRAM, who compiled the Geography of *Anadoli*, during the flourishing times of the Turkish dynasty : HAJY KALIFA, who wrote the remainder of the geography of Asia Minor ;\* together with

\* *Anadoli*, (or *Natolia*) is often taken for the whole of the Peninsula of Asia Minor ; but is, however, only the *North western* half of it : the remainder passing under the names of *Rûm* (or *Rumiyah*), and *Karamania*.

that of *Syria, Armenia, Mesopotamia, &c.*: and finally, EDRISI and ABULFEDA. The author is indebted to the great kindness and zeal of M. Hammer, of Vienna, for translations of the two first of these authors; which have proved of the utmost service to him; and indeed, without them, his work would have been exceedingly imperfect. And hence it becomes difficult to express the great obligations due to M. Hammer from the author. The matter contained in these translations, supplies, amongst a variety of other information, the facts on which the identity of several important positions in the *Anabasis*, with others in modern geography, is founded: such as, the *Forum* of the *Kramians*, with Kermian (or Kutahiah); of the *Chaoi*, with the country of Khanoos; and that of M. *Theches*, with Teké or Tekman. The notices from EDRISI, are collected from the Maronite translation of the work of that Geographer: and those from ABULFEDA, from the translation made by Rieske.

The exterior form of the celebrated PENINSULA of ASIA MINOR, has now attained a near approximation to the truth, in the view of general geography. This improvement owes its existence to the labours of M. De Beauchamp, in 1797, and of Capt. Beaufort, of his Majesty's navy, in the years 1811, and 1812. The former of these gentlemen, (well known by his *Travels and Observations in Persia*, previous to his visit to the Euxine,) was employed by the French government, in making a tracing of the southern shores of the Euxine, from the canal of Constantinople to Trebisonde; and in taking

celestial observations for determining the longitude and parallels of certain places within that space ; which is accordingly corrected in 15 different points, either by celestial observations or by chronometers. These materials have enabled the author to arrange, with success, a part of his subject, whose geography to that time, had remained in the most vague and indeterminate state possible. The chart was obtained for the author, by the kindness and good offices of M. Otto, in 1801. The observations and description of the coasts, appear in the 2d volume of the *Mémoires sur L'Égypte*.

Capt. Beaufort's chart of the southern coast of Asia Minor, (commonly called, though improperly, the coast of Karamania), is an important addition to geography ; and more particularly to Hydrography ; for which purpose it was chiefly undertaken, by the order of the Right Hon. Charles Yorke, during his naval administration. The survey, (now forming a magnificent atlas at the Admiralty office), has been executed in a style calculated to afford the greatest satisfaction on the perusal, and no less security to the navigator : and contains, besides the southern coast of Asia Minor, certain portions of the western coast also, in the quarters of *Iōnia* and *Caria* ; which had been previously surveyed by Capt. Beaufort.

A great source of derangement in the former maps, was the error of referring certain ancient cities, whose positions regulated the geography of the tracts around them, to wrong positions in modern geography. Amongst these, *Archelais Colonia*, and *Celænæ*, are remarkable instances. The former,

taken by M. D'Anville for the present Erekli, but which appears to have stood near Akserai, is in consequence placed 46 G. miles too far to the south: and entirely deranges the geography of the surrounding tract. And *Celænæ* was placed at Aufium-Kara-Hissar, when it should rather have been at Sandukly, 22 G. miles farther to the south-west. It has been rectified, in consequence of discovering that *Bayad* is doubtless the *Beudos Vetus*, of Livy; which was only 5 miles from *Synnada*; whence the connection of this latter with *Apamia Cibotus* in the Theodosian tables, necessarily leads to *Celænæ*, whose site was close to that of *Apamia*.\*

M. Niebuhr's fortunate discovery of the name of the village which appears to occupy the site of ancient *Issus*, (that is *Oseler*,) throws light on all the positions around the gulph of that name:† in particular on those of the pass, named by Xenophon, the *Gates of Syria and Cilicia*; and of *Myriandrus*, whose port having been filled up with alluvial matter, has its site, at this time, at a considerable distance inland. The site of *Issus* was indeed so little understood, that M. D'Anville placed it on that of Ayasse, (the ancient *Ægeas* or *Ægææ*,) which is on the *western* side of the gulph; although *Issus* is known to have been situated near the foot of mount *Amanus*,

\* The meaning of the word *Bayad* or *Bayat*, itself, is *the ancient*; according to M. Otter, Vol. I. p. 56. The ruins named Herjan are supposed to be those of *Synnada*. Dr. Pocock supposed them to be those of *Amorium*.

† The ancient towns in the Turkish empire have generally preserved their Greek names, although they may have received Turkish ones. *Oseler* appears to be the ancient Greek name of *Issus*, somewhat altered; whilst *Karabolat* appears to be the Turkish name of the same place.

which separated *Cilicia* from *Syria*, and of course must have been situated on the *eastern* side of the gulf.\*

A very remarkable *detour* has been observed in the route of Cyrus and Xenophon, between *Celænæ* and *Iconium* : for after making four marches from the former place to the *Forum of the Kramians*, they were yet farther off from *Iconium*, than when they left *Celænæ*. This *detour*, however, no doubt exists from the following circumstance :

*Peltæ*, in the same route, lay nearly midway between *Celænæ* and the *Kramians*, (i. e. Sandukly and Kutahiah), and although it occurs nowhere in modern maps, yet it may well be taken for the *Peloti* of Edrisi ; as it agrees so nearly with the position in which *Peltæ* would be looked for ; which is to the *northward* of *Celænæ*. So that, as the general direction of Cyrus's route was *easterly*, whilst *Peltæ* and the *Kramians* lay *northwards*, the fact of the *detour* appears to be established.

And finally, we shall mention, that the remarkable fountain of *Fay*, situated in *Syria*, near the Euphrates, appears most evidently to be the *Daradax* of Xenophon ; thus correcting a point in that part of the route, also. It was observed and described by some English gentlemen belonging to the fac-

\* It is scarcely possible to conceive how such a mistake could have arisen, when Arrian describes the flanks of the Persian army, not only as *resting* on the base of the mountains of *Amanus*, but as occupying a kind of bay or recess within the base of those mountains. The positions of the right and left wings of the two armies, so often repeated, prove that Darius was on the side towards *Cilicia* ; Alexander on that towards *Syria* : and the circumstances of the history shew, that the *Pinarus* river lay between *Issus* and *Syria* ; although M. D'Anville supposed the contrary.

tory at Aleppo, on their return from visiting the ruins of Palmyra, in 1691.

The English translation of the ANABASIS by Mr. Spelman, has been followed, with a very few exceptions ; and with a very few additions, from the French edition of M. Larcher. The latter gentleman had an opportunity of consulting some MS. copies of the original, in the king of France's library : by which some additional light is thrown on certain particulars. However, there is a striking coincidence altogether between the two translations ; which gives much confidence to a person, unskilled in the language of the original.

But as it is obvious that in the translation of a large work, such as the ANABASIS, &c. the same degree of attention could not be given to the work at large, as might be afforded to a few select passages, only ; the author has therefore trespassed on a friend, (who on former occasions of the like kind, had liberally assisted him,) to give him translations of passages in Xenophon and other Greek authors, in cases where much depended on a right understanding of the originals.

One of the particulars corrected in M. Larcher's translation, by means of the before-mentioned copies, is that, where the field of battle of *Cunaxa* has been described, almost universally, to have been 3060 stadia, distant from Babylon. (Lib. II. c. 5). This, in more than one of the MS copies, is 360 ; which agrees better with the reason of the thing ; and approximates to Plutarch's statement of the distance, (in his life of Artaxerxes,) which is 500 stadia ; or only differing 12 to 14

miles from the other. M. Larcher has also added in his preface and notes, some useful explanations and notices, respecting certain parts of the text of the *Anabasis*.

But it does not appear that there is, amongst all these copies, any variation in the wording of that very perplexing passage, which relates to the improvement of their military disposition, when formed in a *hollow square*, during the retreat:\* and to the filling up of the openings in the rear, occasioned by the separation of the flanks, when forming the square anew, after coming out of a defile. (Lib. III. c. 21.) It must, therefore, be concluded, that the omissions, or corruptions, or both, to which that passage, as it now stands, appears to have been subjected, must have taken place in very early times. Nor does it appear, that the translators have generally been aware of the multiplied difficulties that arise, in the attempt to unravel the meaning of the passage; when considered practically in all its circumstances.

It is hoped that it will not be deemed too great a presumption in the author, to have attempted a solution of the difficulty, by seeking a meaning, (not from the text, but) from the apparent nature of the evils that were felt, and attempted to be remedied.

But it is even hoped that this attempt may lead to a more perfect solution of the difficulty, by inducing military men of genius

\* That is, the change from an *equilateral* to an *oblong square*, or *parallelogram*; after having experienced the inconvenient form of the former; which presented too wide a front to make its way over ordinary ground.

and experience, to undertake a nice examination of the passage, as it now stands; and then to consider what the supposed circumstances of the case, would have required: for it appears to have been hitherto, too much neglected. Perhaps no season could be more propitious to such an enquiry, than the present; for surely, since Europe has been civilized, it has never possessed, at any one time, such an aggregate of military talent and skill; growing out of a course of experience, unusually protracted, but at length terminating gloriously for the cause of order, and civil liberty, against a monstrous combination, in which lawless Jacobinism, was leagued with a frightful military despotism, upheld by a fraudulent usurpation. Nor need we seek for assistance, in the present case, beyond the bounds of our own proper Empire; since we possess, of our own growth, whatsoever is transcendant in the science and practice of the art Military: and which has, EVEN NOW, been manifested, in the eyes of ALL EUROPE, by OUR PART IN A VICTORY, which decides the immediate, and we hope and trust, the future, moral and political state, of the CIVILIZED WORLD.

---

It is proper to inform the reader, that the system of geography, by which the route of the Ten Thousand is verified and explained, in the following pages, is that of an unpublished work, on the comparative geography (the Ancient with the modern), of Western Asia; in which the whole construction is entirely new.

Three maps, drawn in conformity with that system, accompany the present work ; and will be explained, in the sequel.

Some may perhaps object to the apparent coarseness, of certain parts of the geographical materials : and, in consequence, to the results arising from the application and use of them. But under a deficiency of Geodosian operations, geography can only be accomplished, by a sedulous attention to every notice that can aid its purposes, in whatsoever shape it may present itself ; and that, not only, in a geographical or historical form, but in any other. It must therefore of course follow, that such notices must sometimes be fallacious ; at others, imperfect ; and also, that certain positions can only be developed by a combination of circumstances. The materials, therefore, not admitting of nice coincidences, in point of result, general accuracy alone could be studied : so that in the relative positions of places, which are distant from each other, a difference of a few miles only, between results arising from different authorities, ought to be regarded, less as a discordance, than as a kind of virtual coincidence.

There will be found at the end of this Preface, a table of the marches and halts, of the army of Cyrus, and that of the Greeks, from Sardis, to *Babylonia* ; and of the latter, from thence to *Cotyora* ; which may be found useful, on occasions of reference.

---

It cannot be denied, that the *ANABASIS*, independent of its merits, arising from the grandeur of its general subject, and

the high reputation of its author ; contains a great variety of incident, to recommend it.

The first part may be regarded as a *March* from *Sardis* to the field of battle, at *Cunaxa*; interspersed with intrigues, and much developement of character. In this march, the halts rather exceed the number of marching days, during the long interval of six months ; in which the Greeks, probably, found themselves, (considered as soldiers in the field), generally at their ease : favoured as they were, for political purposes, by Cyrus.\* His death suddenly changed their condition ; for they were from that time, for nearly a month, kept in a dreadful state of suspense, respecting their future fate ; whilst quartered in the *Babylonian* villages, surrounded by powerful enemies and treacherous friends, who during that interval, were preparing the means intended for their destruction. To this, succeeds three weeks of continued suspicion, whilst marching towards the *Zabatus* river ; escorted by the same people, under pretence of conducting them homewards, as friends : and which ended in the treacherous massacre of their Generals, and others. Then follow three other weeks of harassing retreat, surrounded by the Persian army : but terminated by an unexpected, and almost miraculous escape from them, into the mountainous region of the *Carduchians* ; where a war of a new character, employed them a week, in the

\* It appears to have been in all ages, the system of Asiatic Princes, who could afford it, to retain Europeans in their military service. Alexander had more Europeans opposed to him, at the battle of *Issus*, than the British Government ever employed, at one and the same time, in the whole East.

arduous task of fighting their way through close defiles, and over craggy summits : but which, at the same time, precluded the approach of their more formidable enemy, the Persian cavalry.

Descending from the territory of this ferocious nation, they appear to have proceeded unmolested, and at their ease, during the short interval of a week, whilst marching through a part of the beautiful and plentiful country of *Western Armenia*; when the severe winter, which is experienced in the more elevated parts of that country, overtook them : and had they not obtained shelter and refreshments, during about a week, in certain villages near the summit of Mount *Ala*, beyond the Euphrates; the whole army would probably have perished, in the course of the inclement weather which then prevailed.

They were now arrived at a point, within a fortnight's march of Trebisonde; at which place they seem to have expected a termination of their labours; as they hoped to have collected ships enough, to transport them at once, into Greece. But being either misled by their guide, or mistaking their own situation, they wandered three weeks; chiefly amongst warlike tribes, where they were in danger of perishing by famine: as those tribes were in the habit of depositing their provisions, in fortified, or inaccessible, places. But being finally set right, in respect of their way, they in three weeks more, without any considerable difficulty, arrived at Trebisonde. Here they passed a month, of what to them must have

appeared like holidays ; although during great part of the time, they were compelled to procure their subsistence from the neighbouring mountaineers, at the point of the sword. According to Xenophon's statement in the aggregate, about a twelvemonth was consumed between *Sardis* and *Trebisonde* : although the detail of the history makes it somewhat less.

Their labours, however, did not terminate at *Trebisonde* ; for being disappointed in their hopes of collecting ships there, they once more set out by land :\* but at *Cotyora*, on the borders of *Paphlagonia*, they were supplied with ships, by the aid of the people of *Sinope* : and were finally landed in *Bithynia*. Their adventures now, though more varied, are of a less dignified character, than before their arrival at *Trebisonde*. Their sojourn at that place, very much relaxed their discipline : and their military enthusiasm, vanishing with its cause, avarice appears to have supplied its place ; and to have influenced their future conduct. Having at first, become Free-booters through necessity, (since that must necessarily be the state of any troops, who derive no regular means of subsistence from their employers), a large proportion of them, pursued it, as a system : but even this, failing, they were finally compelled by their necessities, to accept the degrading employment of military service, under a barbarian prince of *Thrace*. However,

\* Antileon, on occasion of the consultation at *Trebisonde*, respecting the manner of their return into Greece, expressed very forcibly, and no less humourously, the wishes of himself and his fellow Greeks : that " since they were arrived at the sea, he wished " to sail from thenceforward, freed from their accustomed labours ; and stretched out, " like Ulysses, to arrive sleeping in Greece." (Lib. V, at the beginning.)

even this part of the History, is not without its share of information ; since it serves to describe the savage character and manners of the *Thracian* Princes, and Tribes of that day : and what is of more importance to history, it develops the character of the Spartan government (recently become universal in Greece, by the downfall of that of Athens); unjust, tyrannical, and insolent ; and such as Greece, collectively, could not long endure.\*

A second winter ended, during this service : and in the following spring, they terminated their EXPEDITION and RETREAT, of full two years duration, by joining the National Army of Greece, destined to attack that part of the Persian Empire, situated in ASIA MINOR. And there appears to be little doubt, that the successful retreat of the Ten Thousand, paved the way for the subsequent conquest of Persia, by the Macedonians and Græeks ; by furnishing so striking a proof of the weakness of its military character, and resources.

The present work was originally intended to form a part of a much more extended one, on the COMPARATIVE GEOGRAPHY

\* It may perhaps be said, that the previous conduct of Athens, to her Colonies, was of the same stamp. It appears, however, that the conduct of *Parent* States, to Colonies, has in all ages and countries, been pretty uniform ; that is, often domineering and unreasonable, in the first instance : and when actuated by jealousy of competition, or dread of resistance, severe, and oftentimes cruel. And perhaps, the more free the Mother Country, the less freedom is tolerated, in its Colonies.

This supremacy is doubtless assumed, on the ground that the Colonies, were creatures of the Parent State : and as such, had derived protection ; and for a length of time, the means of existence, also ; from it. So that in the case of Colonies planted by a State, some pretence may be found ; at least, for a time ; but Sparta had no pretensions of the kind, in respect of Greece, at large.

of Western Asia ; in which a very great progress has been made : but which has been interrupted in the advance towards completion, by various accidents.

Whilst the present work formed no more than a section of the greater one, references were made from it, generally, in order to avoid repetitions. Such was the description of the passes of Syria and Cilicia ; of the rivers and canals of Mesopotamia ; the Roman roads, &c., (each of which subjects formed a distinct section) : but when it was judged proper to separate the Expedition and Retreat from the other, it became necessary, instead of making references, to extract in many cases, such passages as were required, towards the explanation of certain of the subjects ; and to make abstracts of others ; in order to render the work more complete within itself.

The author feels it to be an indispensable duty, and at the same time, a no less agreeable one, to acknowledge the very great assistance which has been afforded him by his friends ; although it may be feared, that the length of the list, which he has to exhibit, is such, that he may incur a charge of ostentation ; whilst he only seeks to express his gratitude. Their zeal in contributing a variety of aids, towards the progress of the original work, from whence the geography of the present one is drawn ; as well as towards the present one, itself ; has been very great ; and has been equally successful. Without these aids, it had been utterly impossible to have produced it, under its present form. And had he even been silent, the work itself would have furnished much internal evidence, to

this point. But as it would be unseasonable at present, to set forth, at large, the obligations due, for the assistance afforded towards the construction of the general work, the author will in this place, confine himself to what belongs to the subject in hand; with the exception of the gracious aid afforded him by his Imperial Majesty ALEXANDER, Emperor of all the Russias: as without it, an interval of several years, might have been lost.

About 11 years ago, his Imperial Majesty, on the application of his Excellency Count Woronzoff, was most graciously pleased to signify, that the author should be accommodated with such plans and charts, as might appear necessary for his object, from the Imperial depot. This happened during the formation of the magnificent Map of Russia, in Europe, which has since appeared; and which contains large tracts of the adjoining continent of Asia. And that no time might be lost, in waiting for the completion of the grand work, (since the Russian surveys were intended to form the basis of the Author's work, towards the north and north-east,) his Imperial Majesty was pleased to confer an additional favor, by directing that such portions of the geography, as were required, for the purpose, should be transmitted, severally, as they were completed. Such attentions to science, deserve, as they will, no doubt, obtain, the acknowledgments of the learned and scientific public.

The Author begs leave in this place to express his obligations to their Excellencies Count Woronzoff and Admiral Tchichagoff, for their polite attentions and assistance, on this occasion.

The important aids furnished by M. Niebuhr, Mr. Sullivan, M. Hammer, Mr. James Morier, and M. Otto, personally; have already been acknowledged: as well as those, derived from the writings and drawings of the late M. de Beauchamp.

To Mr. Browne, whose hazardous and fatiguing researches brought to our knowledge the position and remains of the temple of Jupiter Ammon, in *Lybia*, he is indebted for the principal geographical lines, on which the greater part of the interior of Asia Minor has been constructed: as well as for many celestial observations and explanatory remarks. The melancholy tale of his murder, by banditti, in Persia, whilst on his way to *Transoxiana*, still rings in our ears. It has only just come to the knowledge of the author, that whilst at Erzerum, during Mr. Browne's last journey, he ascertained the general point of elevation of that place; which he found to be about 7000 feet above the level of the sea. The severity of the winters, in that quarter, is particularly dwelt on, in the account of the sufferings of the Ten Thousand, in Chapter XII. of the present work.

His thanks are specially due to Dr. Gillies, on whom he has habitually trespassed, for references to Greek authors; and for translations, or explanations of particular passages; and who has been unwearied in his exertions, to meet the wishes of the author: or, to quote the words of a highly respectable author, "he has on all occasions been kind, prompt, and satisfactory." His thanks are also due to Dr. Charles Wilkins, and to Mr. Marsden, for their great readiness in explaining matters relating to oriental literature.

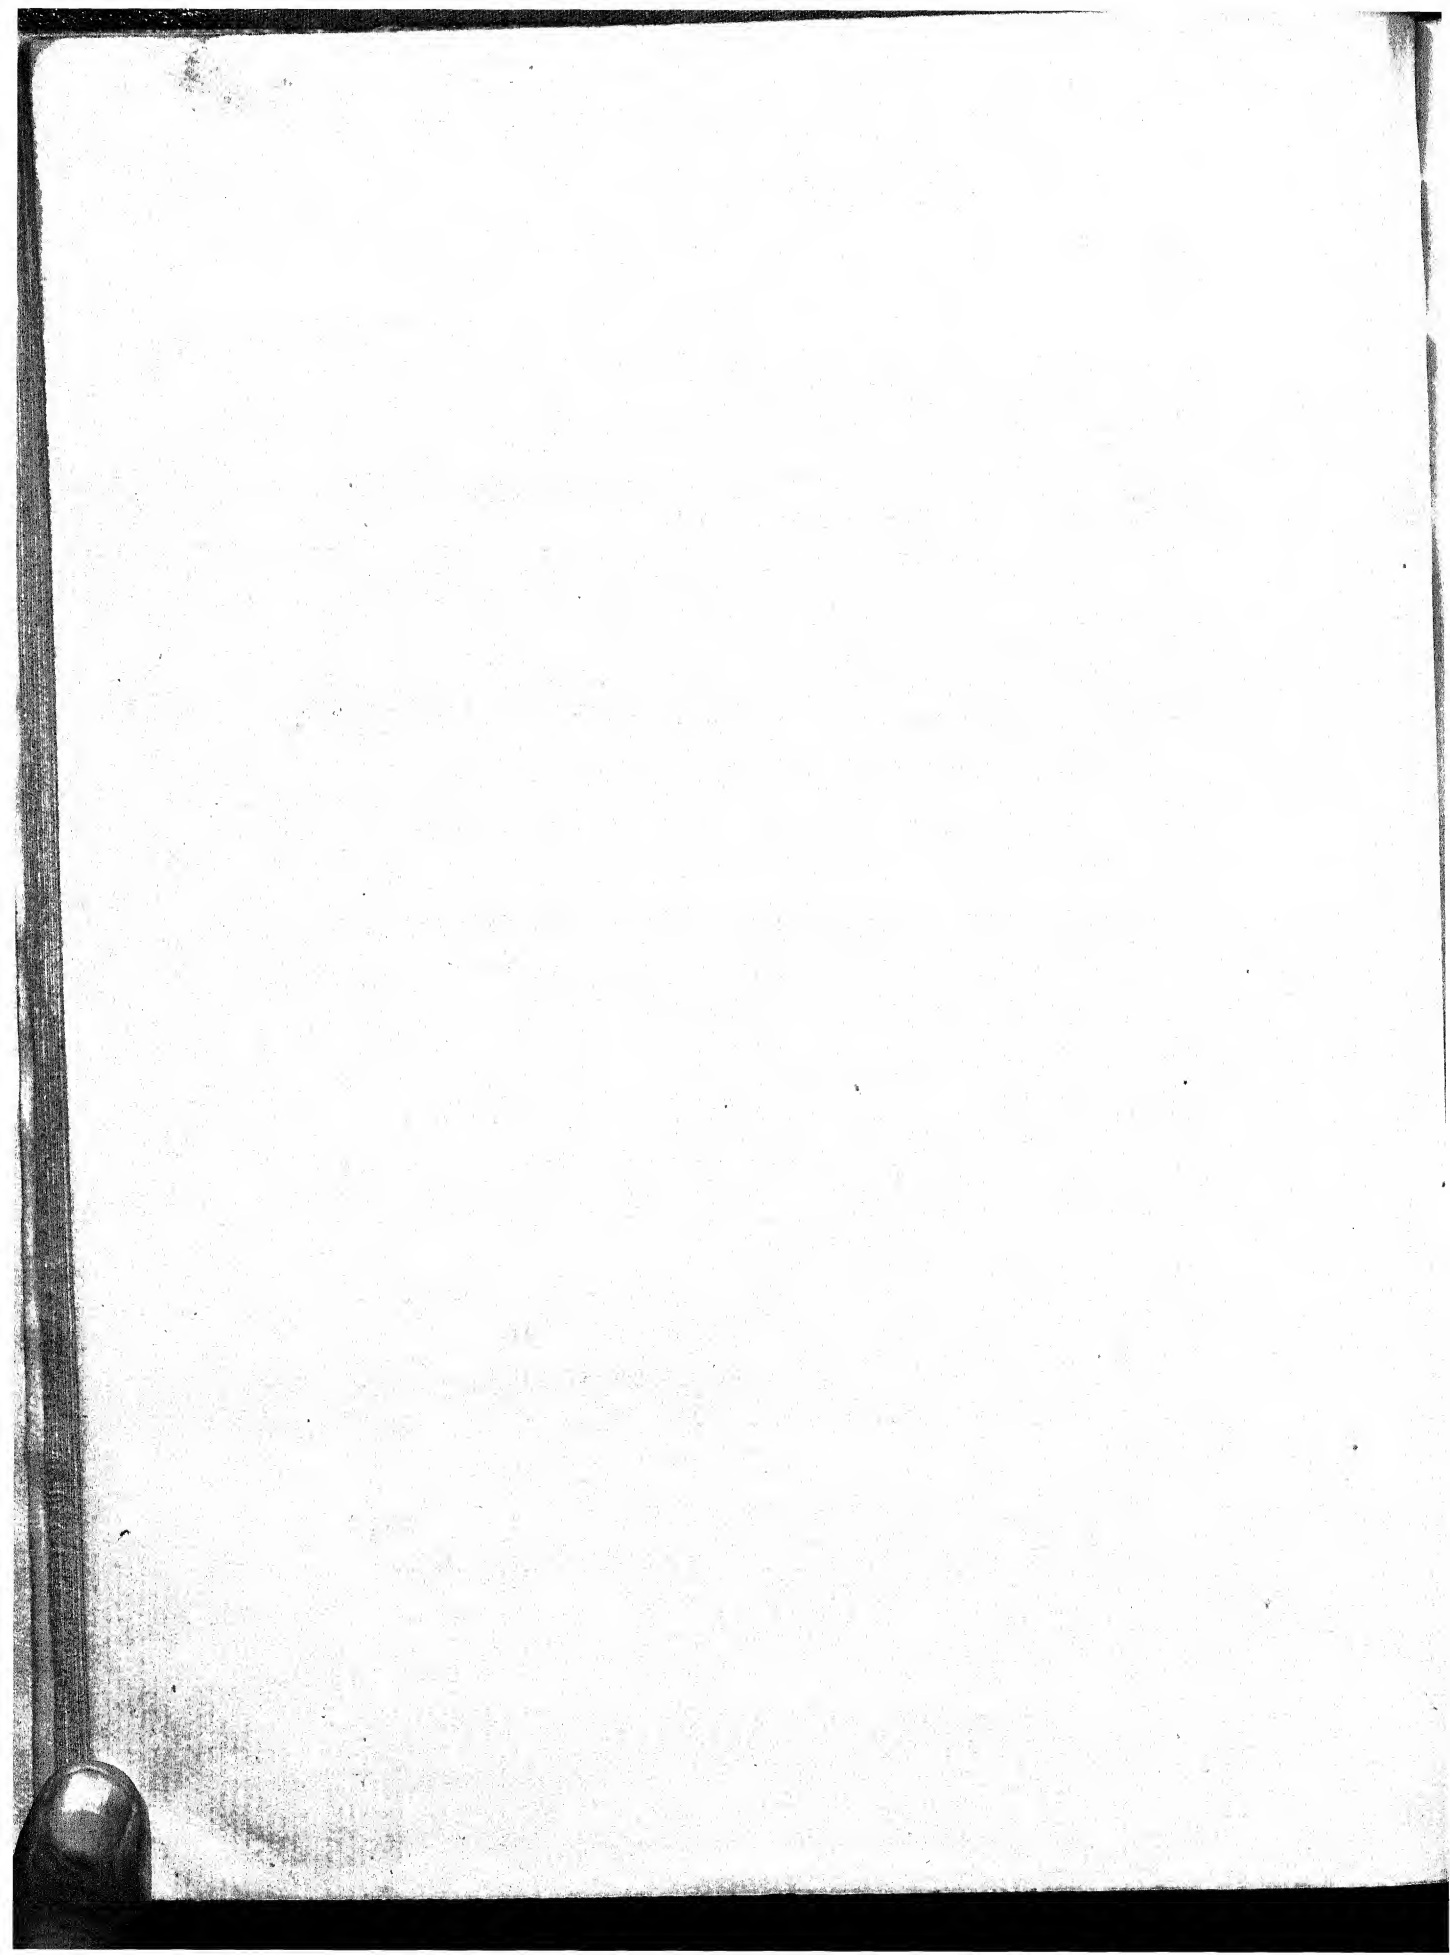

As the work was originally written in 1794 and 1795, and only re-written in its present form, in 1812, the author availed himself of the opportunity, which the interval afforded, of profiting by the advice and assistance of his friends; on whose judgment he either enlarged, retrenched, or altered, such parts as appeared to require it; or added new matter to render it more complete. Sir Joseph Banks, Sir Charles Blagden, and the three last mentioned gentlemen, have more particularly favoured him in this respect.

He also feels himself highly indebted to the following gentlemen, who have communicated much useful information, either from their personal observation, or collected from that of others on the spot; in Western Asia, or in Rumili. They are, namely, the Rev. Mr. Uskoe, formerly chaplain to the British factory at Smyrna; Mr. John Hawkins, who travelled in Asia Minor; Sir Harford Jones, Mr. W. Hamilton, Mr. Charles Vaughan, Major Leake, Mr. David Morier, Mr. Thomas Thornton, and Mr. Eyles Irwin. On Mr. Thornton's authority, the detail of the geography of Rumili, chiefly rests: and on that of Mr. Irwin, the desert route to Baghdad, and a great variety of other particulars.

Sir James Bland Burgess most politely communicated, unsolicited, a considerable portion of valuable geographical matter, relating to the sea of Marmora, and to the Euxine, generally: as also various other documents. The author's thanks are also due to Mr. R. H. Inglis, for various remarks, which his knowledge concerning the subject of Western Asia, acquired by reading and enquiry, had qualified him to make.

The Rev. Mr. Smirnove, Chaplain to the Embassy from his Imperial Majesty the Emperor of all the Russias, has never ceased to interest himself in the success of the general work : which has been manifested by his labours, in the furtherance of measures for collecting and transmitting of geographical and other materials.

And lastly, as a person who cannot in respect of the nature of his assistance, be well classed with any of the rest ; the late Mr. Jonas Dryander, Librarian to Sir Joseph Banks, and Vice-President of the Linnæan Society. His assistance indeed, was so various and extensive, that it may be reckoned equal to a host: for not only, what he had made his own, by means of his proper studies, was brought into use ; but he knew where every other thing wanted, was to be found ; at the same time possessing the means of reference on the spot ; and with it the desire of being useful to his friends.

- II. *Note on the Mean Marches of Armies* - - 324
- III. *Concerning the Inundations of the Euphrates, in the quarter between Feluja and Baghdad* - - - 329
- IV. *Concerning the Depth of the Euphrates, and its Rate of Motion; in different parts of its course* - - 329
- V. *Note on a passage in the Anabasis, concerning the river Tigris; omitted in its place* - - - 330
- VI. *On the great elevation of the Mountain of Teke (or Theches) from whence the Greeks first saw the Black Sea* 331
- VII. *Concerning the period of swelling of the Euphrates* 332
- Index* - - - - - 335

THE Maps are three in number, and on different scales, adapted to the explanation both of the general, and the detailed geography.

The FIRST is a *General View* of the whole EXPEDITION and RETREAT; on a small scale; and is placed opposite to the title page, for the more ready means of reference, on the occurrence of any very general question.

The SECOND gives the whole in *detail*: that is, on a scale sufficiently large to shew the daily progress, when required. It also exhibits a general view of the physical geography; such as the principal chains of mountains, lakes, rivers, passes, &c. in and near the line of march.

There will be found, in a corner of the same map, a plan of the gulf of *Issus* (or *Scanderoone*), and its environs, on an extended scale; in order the better to express the positions of the passes, and other particulars around it. It was compiled from the joint observations of Messrs. Niebuhr, Drummond, and Pocock: and is a portion of a map drawn with a view to explain the relative positions of the passes of Cilicia and Syria, and other circumstances respecting the warfare of Alexander and Darius in that quarter.

The THIRD contains on an enlarged scale, that very important part of the Expedition and Retreat, comprised between the commencement of the country of *Babylonia*, and the ascent of the *Carduchian* Mountains, by the Greeks. This last map it is hoped, will afford satisfaction to the reader, whilst attending the steps of the Greeks to the battle of *Cunaxa*, and thence to *Sitace*, and the river *Zabatus*: where a still more interesting scene commences, by their fighting their way through the collective force of the Persian Empire; and accomplishing that RETREAT, which in a military point of view, has immortalized both themselves and their country.

The two last maps being too large to be conveniently folded into the book, are placed within a separate cover: by which arrangement their surfaces remain flat; and thus preserve the relative positions and proportions of the parts, to each other; which the folding has an evident tendency to destroy.

*A TABLE of the Marches, Distances, and Halts, of Cyrus, and the  
Ten Thousand, &c.*

Names of Places.	Number of Marches	Para- sangas	Halt Days	Remarks.
From Sardis to the Mæander River	3	22	.	
Colossæ	1	8	7	
Celænzæ	3	20	30	
Peltæ	2	10	3	
Forum of the Kramians	2	12	.	Taken for Kutahiah.
Caystrus	3	30	5	Supposed to be 5 or 6 marches.
Thymbrium	2	10	.	
Tyriæum	2	10	3	
Iconium	3	20	3	
Through Lycaonia	5	30	.	
Dana (Tyana)	4	25	3	
At the Cilician Pass near Tyana	.	.	2	
Through it, to Tarsus	4	25	20	
Pharus (Sarus) River	2	10	.	The Seihan River.
Pyramus River	1	5	.	The Jeihan River.
Issus	2	15	3	
Syrian Gates	1	5	.	
Myriandrus	1	5	7	
Daradax River	9	50	.	
Thapsacus	9	50	5	It is supposed that these two articles are transposed in the original.*
Araxes River	3	15	3	
Corsothe	5	35	3	
The Pylæ	13	90	.	
Thro' Babylonis, to the field of battle at Cunaxa	3	12	.	
	1	3	.	
	1	.	.	Distance omitted in the original.
* In the text the articles stand thus:				
Daradax to Thapsacus	3	15	5	
Thapsacus to the Araxes	9	50	3	

*The Greeks, alone.*

Names of Places.	Number of Marches	Para-sangas	Halt Days	Remarks.
Returned to the former Camp, at night	1	4	.	} No distances given.
With Ariæus, northward	1	.	.	
Truce Villages	1	.	26	
To the Wall of Media	3	.	.	
Sitace	2	8	.	
Opis	4	20	.	} The Greater Zab.
Zabatus River	11	50	3	
To the Carduchian Mountains	15	.	6	} No distances given, generally.
Centrites River	7	.	1	
Teleboas River	6	30	.	} Aksou River.
To the Villages where they had the first snow	3	15	.	
Halt and attack of Teribazus' Camp	.	.	3	} Supposed to be Yezidkoi.
To the Pass	1	.	.	
Eastern Euphrates	3	.	.	} In the Snow 23 days.
Through the Snow	3	15*	.	
To the Villages of Refreshment	1	.	.	
The Army came in the next day	1	.	8	
With the head man of the village (who leaves them to wander)	3	.	.	
To the River Phasis (the <i>Araxes</i> )	7	35	} Wandering all this time.	} The Harpa-sou River.
To the fortified post of the Taochians, &c.	2	10	.	
Taochians' country	5	30	.	
Chalybians (rather Chaldæans,) and to the Harpasus River	7	50	.	
Through the Scythian's country	4	20	3	
Gymnias City	4	20	.	} Teke mountains (first view of the sea)
Mount Theches	5	.	.	
Through the Macronian country	3	10	†	} Rather 3 marches; as Diodorus says
Sickness, occasioned by the honey	.	.	3	
To Trebisonde	2	7	30	} Rather 6 marches.
To Cerazunt	3	.	10	
Warfare with the Mosynœcians	.	.	.	} No time given.
Through their country	8	.	.	
Chalybians	.	.	.	} Doubtless, much less.
Tiburenians, to Cotyora	.	.	.	
	.	.	.	} No time or distance.
	.	.	.	

\* This is the only time that the distance is mentioned, whilst in the snow.

† Besides the three marches through the country of the *Macronians*, there appears to have been a short interval of time unaccounted for, between the Camp beyond the summit of *M. Theches*, and the frontier of the *Macronians*.

## ERRATA.

- Page i. (Preface) Note, line 4, after *interior of it*, read *since the Materials used in its formation, preserved their original Scale.*
- vii. last line but three, *dele* "*the French Government.*"
- x. Note, read *flank.*
- xiii. line 8, after *experience*, read, *in a contest*, unusually protracted, &c.
8. line 16, read 110,000.
12. line 12 from bottom, read *Artabarzanes.*
28. Note, read *rate.*
36. line 11 from bottom, read *at the end.*
50. line 1, read 39, and  $19\frac{1}{2}$ .  
line 5, read 39, and  $39\frac{1}{4}$ .
62. line 13, read an *ancient Town.*
63. Note, lines 14 and 15, *transpose* Callinicum and Nicephorium.
78. line 10, read *canal.*
87. line 12 from bottom, read 34, and 44.
99. line 2, for *Myriandrus*, read *Tbapsacus.*
117. line 3, after the Plain, read *for the mountainous barrier*, &c.
127. line the last, read the river *of Dokhala.*
194. first Note, *dele* "*probably.*"
195. Note, line 2, read, *He travelled* in the line, &c.
205. line 17, for 4, read 3.
216. line 1, for *the*, read *this.*
235. line 4, for 30 to 40, read 20 to 30.
239. line 7 from bottom, read *original cause.*
255. line 2, read *might have become.*
277. line 12, Thevenot's reckoning should have been *New Style.*
280. line 3 from bottom, after "*Autumn;*" read, *and that they may be quite clear*, &c.
281. line 7, read *first* to mention.
329. line 8 from bottom, for *that place*, read *page 76.*
331. line 11 from bottom, for *River* read *Rivers.*
338. last line, for 31 read 11.

## CHAPTER I.

### PRELIMINARY OBSERVATIONS.

---

*The ANABASIS, the most interesting portion of ancient Military History—requires much Geographical Illustration—partly accomplished, by the observations of recent travellers—The Itinerary Measures of XENOPHON, considered—great errors in the numerals—his Parasanga shorter than the Persian standard, whether ancient or modern : and appears to be equal to three Roman miles—Enquiry concerning the length of the mean Marches of great armies ; considered as a scale for geographical purposes—observations on the number of Marches, and on the distances, noted in the Anabasis—rate of marching, deduced from these statements ; which differs but little from that of the mean march of large armies, taken generally—Xenophon has incurred blame, by omitting to censure the conduct of the younger Cyrus, and of Clearchus—The Anabasis contains much information, respecting the nature and constitution of Grecian Armies—contrast between the characters of the individuals of the Grecian and of modern Armies—the Grecian Auxiliaries of Cyrus, consisted of select men—The Anabasis, in the form in which it now appears, must have been written long after the date of the events ; probably from notes taken during the Expedition.*

**T**HIS Expedition, taken in all its parts, is perhaps the most splendid of all the military events, that have been recorded

in Ancient History: and it has been rendered no less interesting and impressive, in the description, by the happy mode of relating it. Yet it has doubtless lost a part of its value amongst critical readers, from the want of such illustrations, as might serve to remove, or to explain, the numerical and other errors, which at present render certain parts of it, either unintelligible, or improbable. And as the greater part of the tract, through which the Expedition led, was, until latter times, unknown in detail, to Europeans; no means of comparing the Narrative with the actual Geography, existed. So that, in many cases, the reader was compelled, after much examination, to take for granted, what the mind naturally required to be verified; and in others, to forego all enquiry, as entirely hopeless.

And, since military operations often receive their character from the nature of the ground, on which they are performed; neither can the mind be satisfied, without such a representation of it, as will aid the developement of the causes, of the several movements; for *written* descriptions will not always express what is required.

The Author has been fortunate enough to obtain many new documents, illustrative of this subject; and in particular, certain routes of modern travellers over the ground, on which the Ten Thousand were the most closely pressed by the Persians, during their retreat from the river *Zabatus* to the foot of the *Carduchian* mountains; one of the most interesting parts of the History. Mr. John Sullivan, in particular, noted the nature and quality of the ground, along, and near the eastern shore of the Tigris; between the foot of the before-mentioned mountains, and the city of Mosul: opposite to the site of which

city, the Greeks may be supposed to have arrived on the fifth day after the commencement of their retreat from the *Zabatus*.

The place at which they crossed the *Euphrates* in *Armenia*, has also remained doubtful: but a notice in Hajy Kalifa, joined to another in Diodorus Siculus, serves to fix, or at least, to approximate very closely, this important point in their route.

The position of the city of *Gymnias*, (or *Gumnias*), to which they came, after they had *recovered* the route, towards Trebizonde; is believed to be found in a place named by different travellers, Coumbas, Comasour, and Kumakie. It is of much importance in ascertaining the latter part of the route. And finally, the line of positions along the great southern road, through Asia Minor, described by M. Niebuhr, Mr. Browne, and others, has afforded great aid towards adjusting the different points, arising in the route between *Sardis* and *Tarsus*.

In the compilation of the geography of this expedition, one grand *desideratum* was the SCALE: for the number of Parasangas given, for the length of the daily march, taking the Parasang at the usual rate of three miles, is, oftentimes, beyond probability. On the other hand, the distances appear to be sometimes right, when the number of marches is wrong. And again, it happens, in many cases, that the number of marches *alone*, is given, without any statement of the distance marched. It thus became necessary, not only to ascertain the standard of the Parasanga, recorded by Xenophon; but also to enquire into the length of the mean daily marches of large armies; in order to be enabled to regulate, and to apportion, the distances.

With respect to the *Parasanga* itself, there can be little doubt but that it was the same *denomination* with the *Farsang*,

in present use, throughout Persia. But the standards differ very considerably: the Farsang being, at a mean, little short of  $3\frac{1}{2}$  British miles; whilst the parasanga of Xenophon was no more than 3 Roman miles; or little more than  $2\frac{3}{4}$  British: (strictly, 2,78). Both Herodotus and Xenophon say, that the parasanga consisted of 30 stades:\* and as these may be supposed to have been of the *Grecian itinerary standard*,† the parasanga would be equal to 2,9 British miles; or  $\frac{1}{24}$  only, longer than that of the *Anabasis*.

It may be conceived that Xenophon adopted, or meant to adopt, the itinerary measure of the Persians, on the above evaluation, at which it was estimated in Greece; and which, it has appeared, was not very wide of the truth. But then, he uses the same standard during the whole Expedition and Retreat; although it cannot well be supposed, that the same itinerary measure prevailed in *Lydia*, as in *Assyria*, or in *Armenia*. It is therefore, only by a reference to the ground marched over by Xenophon, in the few places where the Geography is well known, that a just idea of his standard can be obtained: and it fortunately happens, that in *Cilicia*, he travelled a considerable space, over which a Roman road was afterwards formed; and which is registered in their itineraries.

The Jerusalem Itinerary has 45 Roman miles between *Tarsus* and the river *Pyramus*, at *Mopsuhestia*:‡ which distance is given at 15 *parasangas*, in the *Anabasis*.§ And although the

\* Herodotus in *Terpsichore*, c. 53; and Xenophon in the *Anabasis*, Lib. II. c. 5.; where 535 parasangas are said to be equal to 16,050 stades.

† See the *Geographical System of Herodotus*, at the conclusion of the second section.

‡ See pages 579, 580. It is called *Mansista*, in the Itinerary. § Lib. I. c. 17.

comparison cannot be so pointedly made, through the whole extent between the *Pyramus* and *Myriandrus*, yet it may clearly be inferred, that the 25 parasangas allowed for this interval, agree generally to 3 Roman miles, each.\* Again, the 25 parasangas between *Tyana* and *Tarsus*, agree to the 75 miles of the aforesaid itinerary.† In effect, the parasanga of Xenophon agrees with 3 Roman miles: and appears to differ only  $\frac{1}{24}$  part from its reputed standard of 30 stades, in Greece.‡

With respect to the marches of large armies, it is proper to observe, that such marches, taken at a mean rate in *road* distance, and afterwards reduced to *direct* distance, by a rule founded on experience, in a great variety of cases; may be used with great advantage as a scale, in the construction of geography. For the *mean* rate of the daily marches of armies, is much the same at all periods, and in all countries; since the physical powers of men, in the aggregate, are much the same every where. This is, however, to be understood, of large armies, attended by a proportionate number of carriages and beasts of burthen; and of marches which are continued for some length of time.

In the course of our enquiries, examples have been collected from a variety of quarters; and the result is somewhat above 14 British miles *by the road*; or about 12 geographic; and which, reduced to direct distance, may be taken at about  $10\frac{1}{2}$ , of the latter standard, on a line of 8 or 10 marches. But a single

\* In Chapter III. will be found a Table, in which the ancient and modern distances on this road, are compared, in detail.

† Pages 577, 578, and 579.

‡ It may be added, that, by all that can be collected, the same scale agrees best with the ground, throughout the expedition and retreat.

march; or even 2 or 3 taken together; may produce about 11 geographic miles, each. Amongst other examples, is that of 95 *measured* marches of a Mogul army in the 17th century; during a campaign in India, and in the bordering country of Persia. This army was large; as being commanded by one of the Imperial family in person; though by no means equal in numbers to that of Cyrus. In respect of its appointments, it may be called *light armed*; and its mean rate of march was 14,6 British miles, (or somewhat more than  $14\frac{1}{2}$ ), by the trace of the road.\*

Those who may have been accustomed to read the accounts of the exceeding long marches of Alexander, during certain periods of his Expedition, may possibly be inclined to doubt these statements: but the long continued *forced* marches of this Commander, in which he manifested no feeling, either for man or beast, whilst his thirst of dominion continued; these are out of the question at present.† This may also apply in a degree to Bonaparte: but then *his* marches were across countries well *stocked*, as well as inhabited; and where he might sweep the whole line of his route, of its horses and carriages, to assist in transporting his army, and its appointments. Persia presented a different face: and more particularly some of its desert parts, that were passed over with so much rapidity, by Alexander.

\* This statement was communicated by the late General William Kirkpatrick; who was well read in the *Commentaries* and Journals of the different Mogul Emperors of India, of the line of Tamerlane. It is proper to remark, that in the Indian National Armies, there was a department, which had the care of measuring the line of the route; regulating the time, &c.

† That is, meaning here to speak of those Commanders, who only hazard the lives of their men in hostile conflict.

When this latter Commander marched from *Ecbatana* to *Rages* (Hamadan to Rey) in 11 days; which was at the rate of about 19 British miles per day, Arrian says (Lib. III.), that although "many of his soldiers fainted on the road, and "many of his horses died, through excessive weariness, Alexander still resolved to proceed at the same rate."

Here it may be observed that an increment of *less than one third*, over the ordinary march, when long continued, produced excessive lassitude, and consequent *loss* of men and horses. Most of the men, who *drop*, in this manner, in hot climates, never rise again.\*

If the whole number of marches† in the history of the Expedition and Retreat; together with the number of parasangas, as summed up by Xenophon, in Books II, V, and VII; be

\* It may be conceived that many persons regard soldiers on the march, in the light of ordinary travellers, walking at their ease: and not as men *partially laden*, and under certain restraints. Moreover, the unavoidable stoppages on the march, without actually *resting*: by lengthening the *duration* of the time employed, produce an addition of fatigue, to that arising from the quantity of distance, actually marched.

† It is to be observed, that in the number of marches, and parasangas, given by Xenophon, the aggregate does not agree with the detail, as collected from the History. For instance, the aggregate (in Lib. II.) has 93 marches, and 535 paras. from *Ephesus* to the field of battle; but the detail, which is given from *Sardis* (which is itself 63 MP. or 21 paras. short of *Ephesus*) has 86 marches, and 525 paras.: or it would give from *Ephesus* 546 parasangas. And even if 4 marches were allowed for the 21 par. from *Ephesus* to *Sardis*, the detail would still want 3 marches.

One particular in this matter is worthy of remark. Although the *marches* fall short in the detail by 7, yet the number of parasangas fall short only 10: so that it would appear, that there was an excess of 25 paras. in the detail. And it will be remarked that the marches are given, in the desert particularly, out of all reasonable proportion, too long.

It may also be remarked, that Xenophon neglects the fractions; but perhaps allows them on the whole account, by allowing *integers* for the larger fractions; and sinking the lesser ones; &c.

noted; that is, 93 marches, equal to 535 parasangas, from *Sardis* to the field of battle at *Cunaxa*; and 122 marches, giving 620 parasangas, from thence to *Cotyora*, there will be an aggregate of 215 marches, and 1155 parasangas. And accordingly, by this statement, the *mean* march of the Greeks, taken throughout the whole Expedition and Retreat, is equal to 5.36 parasangas: or reckoned in British miles, as nearly 15, as possible. But if the sum of the marches of the *combined* army, and that of the *Greeks*, be taken separately, as they ought to be; since the two armies were very differently appointed, and differed in point of numbers, in a ten-fold proportion; the mean march of the combined army, will be found to be 5.72 parasangas, approaching to 16 British miles; and that of the Greeks, 5.08 parasangas, or only a small fraction over 14 British miles.

Hence it would appear, as if the grand army of 110,500 men, with all their incumbrances, had out-marched one of 12,000; without any incumbrances; at the rate of two Roman miles per day; (i. e.  $17\frac{1}{4}$  to  $15\frac{1}{4}$ ). It is true, that the Greeks, during a part of the retreat, were often delayed, through the necessity of fighting their way, or of preparing to resist attacks; and in another part, in marching through deep snows newly fallen; whilst Cyrus marched without meeting with delays of that kind. Yet as the disproportion runs through the *whole*, at the above rate of two Roman miles *per* day; the statement cannot be admitted; as being contrary to experience, which on a long continued march, allows only 14 British miles, and a small fraction, by the trace of the road; and which may be taken, as we have said before, at about  $10\frac{1}{2}$  G. miles, in direct distance. It may be remarked also, that the standard of 14

miles, or thereabouts, for the ordinary rate of marching, is, in effect, confirmed, by the general statement of Xenophon: for marches of 5 parasangas, or 150 stades, answering to 13.9 British miles, occur very commonly.\* Nor will the actual space in the geography of the country, allow of marches of 16 miles, *throughout* the march of Cyrus; as the general report requires: and there are palpable errors in the numbers of the parasangas, in many parts of *Mesopotamia*; since 90 are given for 13 marches, through the *hilly desert*; amounting to more than 19 miles per day; and without any intervening halts.

Xenophon indeed says, that Cyrus *hastened* the march, as much as possible: and there is no reason to doubt that the army made as quick a progress as *so large a body, so attended*, could make.† But impossibilities could not be performed: and it is related by Xenophon, that during *this part* of the march, which was previous to their entering the plains of *Babylonia*, there was so great a scarcity of fodder for the horses, that many of them died of hunger.‡ Consequently, one must expect that there was generally, so great a diminution of strength, as to make them fall off, in their rate of travelling: so that the account of marches of *such a length, so long continued*, appears improbable: at least, in this place.

\* See the Table of marches at the end of the Preface, &c.

Amongst the Greeks, a day's march appears to have been reckoned 150 stadia, in common estimation: which, according to our supposition (Geogr. Syst. of Herod, § II.) would be equal to about  $14\frac{1}{2}$  British miles.

† It is said that in Cyrus' army, 400 waggons were employed for the service of the Greeks, alone. [Anabasis, end of the fourth Book]. Hence the whole number must have been very great.

‡ Anab. Lib. I. c. 24.

It appears then, that 14 British miles, and a fraction, may be taken for the *mean* daily march of an army; whether applied *generally*, or to the marches in the *Anabasis*, in particular; instead of the improbable lengths, so long continued; above cited. But when the number of parasangas, agrees with the circumstances of the case, which happens more commonly, the numbers in the text are adopted accordingly. And even when they are out of measure, provided they agree with the actual geography; and a probable cause appears, for making *forced marches*; there also the original numbers are adopted. But probability is not to be violated; for forced marches can only be continued for a time, without destroying both man and beast.

And in respect of the scale of the *parasanga*, three Roman miles are adopted; and these, according to M. D'Anville (in his *Mes. Itinéraire*, p. 44.) are at the rate of 75 to a degree: so that a *parasanga* may be taken, in *direct* distance, that is, with the allowance of *about*  $\frac{1}{9}$ , for winding, at 2,14 G. miles; or for a march of 5 parasangas, about 10,7 G. miles, *direct*; differing only a *shade*, from the mean length of the marches of large armies, taken generally.

It may be proper in this place, to state the length of the different Itinerary measures made use of, or referred to, in the course of the work.

1. The geographical mile, or 60th part of a degree of latitude.
2. British miles of 1760 yards, of which between  $69\frac{1}{4}$  and  $69\frac{1}{2}$  make a degree.
3. The Roman mile or *mille passus*, of which, 75 make a degree. This mile, reduced to *direct* distance, by deducting  $\frac{1}{9}$  from the measure, by the road, will be 0,714 geog. mile.

4. The parasanga of Xenophon, equal to about 3 Roman miles, or 2,4 G. miles by *the road*. In *direct* distance 2,143. Taken at 30 Grecian Itinerary stades, it would be 2,5 G. miles, (about) by the road ; or 2,232 direct.\*

5. The Grecian Itinerary stade has been taken at the 718th part of a degree.† If taken, *practically*, at 720, 12 of these would make a geog. mile.‡

The stade of Strabo is of 700 to a degree.

6. Arabic miles. Of these, there are  $56\frac{2}{3}$  to a degree : or each mile 1,055 G. mile, by *the road*.

\* The modern *farsang*, in common use, on a mean of 1224 farsangs, is 3,455 British miles, by *the road* : or in direct distance 2,653 G. miles. Sir John Malcolm's own route (in 1801) of  $347\frac{3}{4}$  farsangs, gives 2,66 ; and by the road,  $3\frac{1}{2}$  British miles. It is scarcely possible to find a nearer agreement, of the kind.

† See the Geography of Herodotus, Section II.

‡ A learned Grecian, who, not long ago, translated Arrian's Periplus of the Euxine Sea, into English, has taken much pains to controvert the opinions, respecting the scale of the stade, and the rate of sailing of ancient ships, set forth in the Geography of Herodotus. The Author does not intend to enter into a defence of those opinions, leaving them to the judgment of the Public : but it is proper to observe, that this gentleman, by his want of reflexion, has led himself into some very ridiculous mistakes. He supposes the G. miles in the book, to mean *Greek* miles ; why, no one can guess ; as that denomination of miles, is never used in geographical construction : and in the beginning of the Chapter, the word *geographical* is given at full length, together with the scale. So that this gentleman has been *fighling with a shadow*, through two long dissertations ; written, apparently, with a view to lessen the reputation of the book. He, of course, always finds the Author in the wrong, in his results ; because *he* supposes miles of about 87 to a degree ; the Author, those of 60 ! It might almost be supposed, that finding a *G* standing *alone* ; he had *pressed it into the service* of the Greeks, to give it employment !

Nor do his mistakes end here : for amongst others, he has omitted a whole line of distance in the translation ; which might very much mislead a geographer, who followed him.

7. Marches of great armies. For 2 to 3 days, 11 G. miles, in *direct* distance: for a great number, 10,6, to  $10\frac{1}{2}$ .

8. Ordinary day's journies, on foot, from  $17\frac{1}{2}$  to 18 G. miles, *direct*.

---

Certain of the commentators on this history, have blamed Xenophon for passing over, without censure, or even animadversion, the conduct of the younger Cyrus, in pursuing, what they deemed an unwarrantable plan of ambition; since, say they, it had for its object, the dethronement, and eventual murder, of his brother and sovereign. But that, on the contrary, Xenophon extols his virtues; and doubtless endeavours to place him in an amiable point of view.

Others have defended Cyrus (and at the same time, Xenophon, of course) on the ground of an alledged custom of ancient Persia, respecting the succession to the throne. It may be recollected, that Xerxes, a *younger* son of Darius Hystaspes, was preferred to Artabazanes, the *eldest*; because Xerxes was born, after his father became king of Persia; but the other previous to that event. (Herod. Polymn. c. 3.) Cyrus the younger, and Artaxerxes his brother, were in the like predicament; Cyrus being born after the accession of Darius Nothus; but Artaxerxes, previously: though both of the same mother, which was not the case with Artabazanes and Xerxes.

By the manner, however, in which Herodotus relates the story, it would appear, that the above act in favour of Xerxes, did not constitute a precedent: but rather that he claimed the throne in virtue of being the grandson of Cyrus the Great, the founder of the Monarchy; by his daughter Atossa (c. 2.

of the same book) : and that the plea of being *born the son of the king*, was not thought of, till Demaratus suggested it; and adduced the example of the Spartan succession.\* Moreover, Herodotus adds, that in his opinion, “ Xerxes would have reigned, without this advice from Demaratus; as Atossa enjoyed an almost unlimited authority.” (Polymn. 3.)

Accordingly, one cannot but suspect, that the plea of being *born the son of a king*, was no more than a colourable pretence: and that the true reason of Xerxes’ succeeding, was the superior influence of his mother. It is worthy of remark, that Xenophon is silent concerning the competition between the brothers Artaxerxes and Cyrus on the score of birth; although one cannot suppose him ignorant of a transaction that must have been much canvassed in Greece.†

But, whatsoever may have been the merits of *this* case, Xenophon certainly appears blameable in another matter: and has in consequence, been accused of want of candour,‡ in omitting to mention the *cause* of the banishment of Clearchus

\* This regulation in Sparta, appears to be very extraordinary; as seeming to depart from the principle, on which the preference of one son to another, in respect of the order of birth, has apparently been established: that is, that the elder is naturally supposed to be the farthest advanced in the knowledge of mankind and the science of government.

† It is a curious fact, that a dispute of the same kind, with that between Xerxes and his brother, occurred in the Ottoman Empire, between the sons of Mahomed the second, about the year 1481.

Cantemir says, (p. 119, English Translation) that (Jem) the younger son, disputed the succession with the elder brother (Bajazet II.) because “ it was a dishonour that the empire should be given to the son of a *private man*, in prejudice of the *imperial offspring*.”

‡ By the celebrated M. Larcher, in his Preface to his French Translation of the *Anabasis*.

from Sparta : and merely stating, that he was *a banished man*.\* It must be allowed to be a fault to omit the cause, when it was no less than the crimes of tyranny, robbery, and murder : for as the cause was as publicly known in Greece, as the punishment ; the mere statement of the latter, might lead many to conclude, that a person of Xenophon's high character, thought too lightly of such atrocities. However, in delineating the character of this general, after the massacre at the river *Zabatus*, Xenophon exposes in the strongest terms, and in the happiest manner, his violent passion for war.

“ These (says he), seem to be the actions of a man, delight-  
 “ ing in war ; who, when it is in his power to live in peace,  
 “ without detriment or dishonour, prefers war ; when to live in  
 “ ease, chooses labour, with a view to war : and when to enjoy  
 “ riches, without danger, chooses rather, by making war, to  
 “ diminish them——”†

---

The *Anabasis* lets us more into the nature and constitution of a Grecian army, than any other ancient document ; as entering more into the detail of its discipline, and management. It may indeed, have been, that this particular army, although composed of *Grecian individuals*, as Athenians, Spartans, Boeotians, Arcadians, Thessalians, &c. yet not belonging to the *Grecian states*, it might not have attained so high a point of discipline, as that of their national armies. But in whatsoever *degree*, one must expect the same kind of *customs and observances*.

\* *Anabasis*, lib. I, c. 3 ; and II, c. 25.

† *Anab.* lib. III, c. 26 : Spelman's Translation.

The discipline of a Grecian army, was, in effect, as different as possible, from any thing that appears amongst us, at this day. The army, itself, was a kind of Republic : for during the Expedition which is the subject of the present work, the consent of the ranks was taken, not only in the choice of officers, to fill up the vacancies occasioned by the massacre, and for the adoption of regulations for their conduct, during the retreat ; but even respecting the *disposition* and the *order of march* !\*

How different then, must have been the education and habits of those men, who, by a sense of propriety, alone, could establish a character, which afforded a sufficient security for their conduct, in what related to military discipline ! For, it may be observed, that there was at all times, a prompt obedience, in actual service, howsoever arduous, or dangerous. !†

\* *Anab.* lib. III. c. 13.

During the late expedition across the Continent of North America, for the purposes of discovery, under the conduct of the Captains Lewis and Clarke ; it appears that upon the death of a serjeant, one was elected in his room, by the privates themselves, out of their own body ; which formed a part of one of the regiments of the line, in the service of the United States.

† The oration pronounced by Pericles, on occasion of the public funeral of the Athenians, slain in the first part of the Peloponnesian war, throws much light on the state of society, and of the public mind, at Athens : from whence may be inferred, in degrees, that of the rest of Greece.

“ We enjoy a form of government, not moulded in rivalry of the constitutions of neighbouring states, but which has served as a pattern to some of them ; itself unborrowed from any. It is called democracy, because it embraces the interests of the people at large, not those of a part only of the community. In maintaining the rights of individuals, and adjusting private differences, the law deals impartially with all ; but in the distribution of offices and honours, men are preferred according to the esteem in which each candidate is held, for his personal and appropriate merits ; for the claims of merit supersede the distinctions of birth ; nor is poverty a bar to preferment, when any man appears to be really capable of rendering useful service to the commonwealth. In

But it would even appear, that punishment could not be inflicted, without the consent of the army at large. This is clearly shown by the statement of Xenophon, in his speech to the army, at *Cotyora*; when he sets forth the irregularities and atrocities committed by a considerable number of individuals, at *Cerazunt*.\* At another time, considerable numbers go out of the camp without leave, in the face of the officers, and contrary to their wishes, on a predatory expedition, amongst the *Mosynoeci*: but we hear of no punishment!

Again, a soldier, whilst marching to an attack, loudly remarks that his officer (Xenophon) has the privilege of riding, whilst he, himself, was marching on foot, and fatigued with carrying his shield. The officer dismounts, thrusts the soldier out of his place, and takes it, together with the shield, himself. The soldier's comrades indeed, punish and shame him, on the spot: but the punishment comes from the ranks! All which is so different from our ideas and habits, that we can hardly believe that we are reading the history of creatures of the same kind with ourselves.

However, the individuals who composed the Grecian armies, are not to be regarded as being of the class of men, of which the ranks ordinarily consist in modern times.† Xenophon

the daily intercourse of life, our behaviour is fully answerable to this liberal plan of policy. Exempt from peevishness and irritability, easy and unsuspicious, we view the enjoyments of others with complacence, instead of damping them by those sour looks, which pain, though they cannot punish. Thus inoffensive and indulgent to each other, we are all restrained from offending the public, through respect for the magistrates, and fear of the laws; those written laws especially, which afford redress to the injured; and those unwritten laws, or customs, the violation of which is followed by the loss of character." [Thucydides, lib. II.; translated by Dr. Gillies.]

\* Lib. V. c. 34.

† Lib. V. c. 16.

‡ Since the Greeks very seldom enrolled the poorer classes of citizens: and hence it

moreover informs us, (lib. vi. c. 22.) that “ the greater part of  
 “ the men had not engaged in this service through want, but  
 “ induced by the reputation of Cyrus : some even bringing  
 “ soldiers with them, who had spent their fortunes ; some  
 “ having left their fathers and mothers, and others their chil-  
 “ dren, with a design to return, when they had acquired  
 “ enough to enrich them : for they heard that the other Greeks,  
 “ who before served under Cyrus, had made their fortunes.”\*

---

It seems to be agreed that the History of this Expedition, in the form we now see it, was written a great many years after the date of the transactions, which it records. This appears very clear, by the reasoning of Dr. Forster, in his Geographical Dissertation, annexed to Spelman’s Translation of the *Anabasis*, page 336, *et seq.* on a reference to the digression in the fifth book, c. 12, concerning the offering to Diana. It is indeed almost impossible, that the circumstantial details which so often occur, could have been written during the Expedition ; but it cannot be believed, that the time, distance, and order of events, could, from their nature, have been so well retained in memory ; as other and more important matters, that were too deeply imprinted on the mind, to be obliterated. Such a result, as he has submitted to the reader, could not have been produced, but by *notes*, taken as early as possible, after the events had

had happened, that the loss of a battle, by carrying off many of the richer citizens, endangered, and sometimes changed, the governments of Republics. But, on the other hand, those who served in the galleys, &c. were always of the poorest and meanest of the people. [Dr. Gillies.]

\* Cyrus had directed his officers to raise as many *Peloponnesians* as possible : and of those, the *best men* they could get. [Anab. lib. I. c. 2.]

happened. And the errors, and particularly the *transpositions*, may have been occasioned by his not being able to arrange those notes, in the proper order of time, in which they happened ; whence the order of some of the transactions has been transposed ; and certain rivers, along the coast of the Euxine, have been referred to wrong positions, &c. But after all, the errors are very few.

The  
ROUTE in DETAIL  
of  
CYRUS the YOUNGER,  
from  
SARDIS to BABYLONIA:  
And the  
RETREAT of the TEN THOUSAND,  
from thence to  
TREBISONDE & LYDIA.  
With the General Geography of the  
Surrounding Countries.  
1815.

Explanation  
The Route of Cyrus the Younger is marked by a solid line, and the Retreat of the Ten Thousand by a dashed line. The map is based on the accounts of Herodotus and Xenophon, and is intended to show the general geography of the region at the time.

## CHAPTER II.

## FROM SARDIS TO ICONIUM.

---

THE designs of CYRUS were penetrated by Tissaphernes at the commencement of his Preparations—The early part of his March, whilst collecting his Troops and Stores, calculated to deceive the King of Persia—Progress from Sardis, by Colossæ, to Celænæ; the first place of Rendezvous—The geographical position of Celænæ discussed; and referred to the site of Sandukly—Its description, by Xenophon—Numbers and Classes, of the Grecian Auxiliaries—Further Progress of Cyrus, by Peltæ, the Forum of the Kramians, Tyriæum, &c. to Iconium—The Kramians recognized in Kermian, or Kutahiah; Iconium, in Kuniyah—Plain of Caystrus; and Sakli, or Seleukter—Description of the elevated Vallies of the Pisidian and Cilician TAURUS, through which lay the route of Cyrus—Positions of the Tracts of Isauria, Phrygia-Parorias, and Lycaonia—Review of the Army, in the Plain of Tyriæum.

THE description of the march of the army of CYRUS, from Sardis to Celænæ, in the Anabasis, is very brief; and, abstracted from the record of the geographical stations, and the arrivals of detachments of European troops, is almost totally destitute of

interest : nor does it become much more interesting, until the arrival of the army in CILICIA ; when the secret of its destination could no longer be concealed from the Greeks. In effect, it was little more than a journal of the route, interspersed with a few occasional remarks.

The intentions of Cyrus were penetrated very early by Tissaphernes ; yet the course of his march, at the first, was not such as to point exclusively towards BABYLONIA, nor until he had passed *Iconium*. But having then passed *beyond* the country of the PISIDIANS, against whom the preparations were pretended to have been made ; and having also permitted the Greeks to plunder LYCAONIA, regarding it as an enemy's country ; the individuals of his army must have begun to suspect the truth ; which was known to Clearchus *alone*, amongst the Greeks : as we learn from Xenophon, who declares it, as well as his own ignorance. (Lib. III. c. 3.)

Previous, then, to his taking the direct route towards Babylon (the residence of the King of Persia at that time), his marches must be supposed to be directed, partly with a view to deceive the king, in respect of the Pisidian expedition ; \* but more to collect his detachments of troops, and supplies of provisions and necessaries, that were doubtless prepared for him, in different parts of the country. Upwards of 5000 of his Grecian auxiliaries joined him, after he had crossed the *Mæander* river into PHRYGIA.†

\* Xenophon does not say what provinces Cyrus was entrusted with, by his brother : but under his father, his government consisted of *Lydia*, the *Greater Phrygia*, and *Cappadocia* : in effect, the great body of Asia Minor. The *Pisidians*, who inhabited the difficult parts of Mount Taurus, bordering on Phrygia, had been but imperfectly reduced to obedience.

† See the map of the route, in detail, No. II.

At the outset, instead of taking the more direct route from *Sardis*, eastward, to *Celænæ*, by leaving *M. Messogis* to the south, and traversing the plains described by M. Taverniere and Dr. Griffith; Cyrus proceeded first to the south-east, in the line towards the present town of Dagnislu; near to which he crossed the ridge of *Messogis*; and afterwards the *Mæander*, at the end of the *third* march, (as it is said); and thence to *Colossæ*, on the *fourth*. (*Anabasis*, Lib. I. c. 5.)

This road to the *Mæander*, is a part of that, used in the present times, by the caravans between *Smyrna* and Syria, *Satalia*, &c.: and passed through the *Plain of Cyrus*,\* to the site of *Philadelphia*; coasting the north-east side of Mount *Tmolus*: and thence, crossing the *Mæander*, to that of *Laodicea ad Lycum*,† near the conflux of the *Lycus* with the *Mæander*. The ruins, taken for those of *Colossæ*, are at  $11\frac{1}{2}$  G. miles to the east of *Laodicea*, on a branch of the *Lycus*.

The *Mæander*, said to be two *plethra* or 200 feet in breadth, was crossed at the distance of 22 *parasangas* from *Sardis*; and 8 more brought them to *Colossæ*. These 30 *parasangas*, equal on the scale of Xenophon to 90 Roman miles, give a *direct* distance of  $64\frac{1}{4}$  geographic miles; and agree within  $4\frac{1}{4}$  miles of our construction; which has  $68\frac{1}{2}$ . The Antonine Itinerary and Theodosian Tables, allow 73 and 76 MP. respectively from *Sardis* to *Hierapolis*; equal to  $54\frac{1}{4}$  G. miles, at the highest: and *Colossæ* appears to be about 10 from *Hierapolis*.‡

\* That plain in which Cyrus the Great gained the decisive victory over Cræsus. More will be said concerning it in the sequel.

† *Philadelphia*, *Laodicea*, and *Hierapolis*, being Macedonian foundations, were not of course in existence at that time.

‡ See again the Map, No. II.

This furnishes a very satisfactory proof of the general truth of Xenophon's report of the distance, within this interval: but 90 Roman miles, at least equal to 83 British; and extended by the authority of the map of construction to 85, is too great a distance to be marched over in 4 days, by a very great army. If the number is correct, they must have been *forced* marches: but no object appears to require them: and there is, therefore, probably, a mistake in the number of marches.

The next 3 marches to Celænæ, are rated at 20 parasangas, or 56 B. miles; but the construction requires about 60; so that the rate of marching, from *Sardis* to *Celænæ*, during 7 days, (with an intermediate halt of the same number of days, at *Colossæ*), would be about  $20\frac{3}{4}$  B. miles, at a mean. And the rate, on each interval, being so nearly alike, may render it doubtful whether Cyrus made forced marches to accomplish some particular purpose, which cannot at present be understood; or whether there is an error in the number of marches: for after he left Celænæ, the general rate of marching is more moderate, and approaches to the standard of the mean march. One circumstance is much against the idea of forced marches; which is, the long halt at Colossæ, between the first 4, and the last 3 marches.

It appears, however, that the *given distance* of 50 parasangas differs no more than  $\frac{1}{24}$  part from the construction; the one giving 139, the other 145 B. miles. But this space is equal to 10 mean marches, instead of the 7 given.

Of *Colossæ*, famous on the score of St. Paul's Epistles to its inhabitants, four centuries afterwards, so few traces remain, that the Drs. Pocock and Picinini, found some difficulty in ascertaining its site; but which, it cannot well be doubted, is

at Konous, 5 hours of travelling to the eastward of Degnislu. Xenophon describes it to have been "a large city; rich and well inhabited." It is probable that the subsequent foundations of the Macedonian cities of *Laodicea* and *Hierapolis*, occasioned the decline of *Colossæ*; both of which have disappeared, in their turn, and have left no other representative, than the small town of Degnislu, or Denislu.

The position of *Celænæ*, as well as that of *Apamîa Cibotus*, (which succeeded it, as the capital of that part of the country, and stood very near it), is determined by the distance of the latter from *Synnada*, on the one hand; *Hierapolis*, on the *Mæander*, on the other: as is shewn by the Theodosian tables.\* It receives also a slight check from the march of Alexander from the quarter of *Sagalassus*. These notices agree in placing *Celænæ* at Sandukly, a modern town of some consideration, situated on one of the heads of the *Mæander* (now Meinder), which was generally allowed to have its principal source at *Celænæ*. (See Map, No. II.) This branch of the *Mæander* is formed by some fine springs, which flow from the foot of a ridge of lofty hills; as is reported of those at *Celænæ*.

But, although its place on the map may be satisfactorily determined, yet it is *only on the map* that it is at all determined: for no *European* traveller has yet pointed out any remains:

\* It may be proper to state in this place that *Hierapolis* is determined in position, by the journal and observations of Dr. Chandler: and *Synnada*, by the marches of the Consul Manlius from *Pisidia* to *Galatia*; (Livy, lib. 38, c. 14). He came to it in one short march from *Dinæ* (Bulawadin), and at 5 MP. short of *Beudos Vetus* (Bayad, or *The Ansient*). In this situation, according to Dr. Pocock (Vol. II. part 2, p. 85), there are found considerable remains, named by the people of the country, *Herjan*; and which appear to answer to *Synnada*.

although it is known from the *natives*, that there are ancient remains at Sandukly.

The discussion of the geographical position of this place, involves too many particulars to be allowed a place here: but it will hereafter be found in the observations on the Roman roads in Asia Minor, in a separate work.\*

Xenophon says of *Celænæ*, that it was "a city of *Phrygia*, "large, rich, and well inhabited: here the palace of Cyrus "stood, with a large *park* full of wild beasts, which Cyrus "hunted on horseback, when he had a mind to exercise himself and his horses. Through the middle of this park, runs "the river *Mæander*; but the head of it rises in the palace: "it runs also through the city of *Celænæ*. There is, besides, "a fortified palace belonging to the great king in *Celænæ*, at

\* The following is an abstract of that discussion. The Theodosian Tables give 73 MP. between *Synnada* and *Apamia*, through *Euphorbium*: and from *Hierapolis* to *Apamia*, 72. The interval of space on the geographical construction, agrees with the aggregate of 145, within a mile: for Sandukly lies almost exactly between the two. *Apamia* appears to have been a very few miles only, lower down the river than *Celænæ*.

Alexander is said by Arrian (lib. I.) to have made 5 marches between *Sagalassus* and *Celænæ*; passing by the salt lake *Ascanias* (Burdoor), in the way. The distance agrees to Sandukly.

On the other hand, the *forum* of the *Kramians*, taken for Kermian, or Kutahiah, was 22 parasangas, or 47 G. miles direct, from *Celænæ*, in Xenophon's march. General Koehler reckoned 25 hours; equal to  $51\frac{1}{2}$  G. miles, direct, between Sandukly and Kutahiah: and hence, considering that the distances in question, are *computed*, (at least, all but those on the Roman roads), it may be allowed that *Celænæ* occupies nearly its proper position, in ancient geography.

Sandukly was also visited by Dr. Pocock: but he regarded Ashkly (or Ishakli), a place situated about 20 miles farther to the SW. as the site of *Celænæ*. However, Ashkly not only differs widely in point of situation, from what the context of the geographical construction requires; but is also too far removed from the upper part of the course of the *Mæander*, to be at all considered as being near the head of that river, as the description requires.

“ the head of the river *Marsyas*, under the citadel. This river, “ likewise, runs through the city and falls into the *Mæander*.” (Lib. I. c. 5.)

*Celænæ* appears to have been the grand *rendezvous* of Cyrus’s army; and here he staid no less than 30 days. Menon, the Thessalian, had joined him at *Colossæ*, with 1500 men; and at this place, Clearchus and others arrived with a further aid of 3700. The whole body of Greeks was now *said* to amount to nearly 13,000; of which, 11,000 were heavy armed. But this account does not agree with the numbers reviewed before the battle (of *Cunaxa*): taking into the account the reinforcements at Issus.\*

\* Here follows a detail of the numbers:

						Heavy Armed.	Light.	Total.	
Joined at Sardis :									
With Xenias	-	-	-	-	-	4000	...	8200	
Proxenus	-	-	-	-	-	1500	500		
Sophænetus (Stymphalian)	-	-	-	-	-	1000	...		
Socrates	-	-	-	-	-	500	...		
Pasion	-	-	-	-	-	...	700		
At Colossæ :									
Menon	-	-	-	-	-	1000	500	1500	
At Celænæ :									
Clearchus	-	-	-	-	-	1000	700	3700	
Sosias	-	-	-	-	-	1000	...		
Sophænetus (Arcadian)	-	-	-	-	-	1000	...		
At Celænæ, according to the detail						-	-	-	
						11,000	2400	13,400	

Xenophon says there were 11,000 heavy armed, and *about* 2000 light armed, reviewed at *Celænæ*.

At Issus, there came with			
Cheirisophus - - - - -	700	...	1100
From Abrocomas - - - - -	400	...	
Grand Total,	12,100	2400	14,500

At the review, 3 days before the battle, there were only

Here is a difference of 1700 men; and that difference lies amongst the heavy armed. And it will be observed, that the aggregate and the detail agree nearly at the review at

From *Celænæ*, Cyrus marched to *Peltæ*, in two marches of 5 parasangas each; answering to about 14 of our miles. This place appears to have lain to the northward from *Celænæ*: as well as the next station, the *forum* of the *Kramians*; situated 12 parasangas beyond *Peltæ*; and which was also accomplished in two marches.

And here it becomes necessary, as well for the purpose of establishing the positions of the two last stations; as to remove the difficulties that occur, respecting the future ones; to step at once from *Peltæ* to *Iconium*, which is the first position that can with *absolute certainty* be recognised in this route, after *Celænæ*; although 17 or 18 marches distant. The detail of the marches from *Celænæ*, is given thus: (Lib. 1. c. 6, 7, and 8.)

<i>Celænæ</i> to <i>Peltæ</i>	2 marches	10 paras.
Thence to the <i>Kramians</i>	2	12
To the plain of <i>Caystrus</i>	3 given: (more probably 5 or 6)	} 30
To <i>Thymbrium</i>	2	
To <i>Tyriæum</i>	2	10
To <i>Iconium</i>	3	20

Here are 70 parasangas from the *Kramians* to *Iconium*; equal to about 150 G. miles, taken in *direct distance*: but a correction is first to be made, between *Tyriæum* and *Iconium*; founded on a fact that occurs in Strabo.

*Tyriæum*, in the above table, is given at 20 *paras.* short of *Iconium*, equal to 43 G. miles, *direct*. Since the time of

*Celænæ*. Who can decide? One is rather inclined to adopt the numbers at the review before the battle; as no losses of any consequence are stated to have happened, previously. Possibly, the error lies in the number brought by *Xenias*, in the first article.

Xenophon, *Laodicea Combusta* was founded, at 9 hours of traveling, to the N.W. of Iconium: and the Theodosian Tables furnish a line of distance, from *Laodicea* to *Synnada*, passing through *Philomelium*, (a city of some note) which is placed at 28 M. P. or 20 G. miles from *Laodicea*; 67 M. P. or  $47\frac{3}{4}$  G. miles from *Synnada*.\* And accordingly, if 20 G. miles be allowed for the 9 hours, between Iconium and *Laodicea*, *Philomelium* should be 40 such miles from Iconium; and to the north-west; which will fall into the line of Cyrus's march.

Now Strabo (p. 663.) in describing a Route from *Ephesus* to the Euphrates, at *Tomisa*, brings us FIRST to *Philomelium* IN THE WAY to *Tyriarium*; (doubtless the *Tyriæum* above recorded). Consequently then, if *Philomelium* was no more than 40 G. miles short of *Iconium*, *Tyriæum*, which lay still nearer to *Iconium*, could not have been 20 parasangas, or 43 such miles from it! The probability therefore is, that the three marches, instead of being of nearly 7 parasangas each, as given in the *Anabasis*, were only of the ordinary length, or about 5: and in consequence only 15 or 16 parasangas may be reckoned; which will place *Tyriæum* about 6 miles to the eastward of *Philomelium*, instead of the opposite side; as the text of Xenophon would make it. It is out of all probability too, when there was no enemy within 200 miles, that the former four marches should be of 5 paras. each, and the three latter of nearly 7 each.

Having thus placed *Tyriæum*, it will be found that the corrected distance between the *Kramians* and *Iconium* will be  $14\frac{1}{2}$

\* The space between *Philomelium* and *Laodicea*, is a portion of the great Roman road from *Nicomedia* to *Tarsus*, through *Dorylæum* and *Iconium*.

G. miles *direct*, instead of the 150 given by the text: as also that  $141\frac{1}{2}$  being laid off, on the modern road from *Iconium* (Kuniyah) through Ilgoun, and Akshaher, will fall at about  $5\frac{1}{2}$  *beyond* Kutahiah; the present capital of a Sanjak of the same name: and known in Roman times under the name of *Cotyæum*. And moreover, that the 22 parasangas, equal to 47 G. miles, laid off from Sandukly, considered as *Celænæ*, for the distance from thence to the *Kramians*, will reach within 4 or 5 miles of Kutahiah; \* whence, of course, the distances agree generally, in placing the *Forum of the Kramians* at or near Kutahiah.†

There is another circumstance to be mentioned in favour of the argument. The Turkish Geography of Anadoli states, that "the province of Kutahiah" (which answers nearly to *Phrygia Pacatiana*) "was named *Kermian* from the name of "the family of its former (or first) masters." This indeed, *appears* to mean a Mahomedan Dynasty; but it may also be meant for a more ancient name. It is certain, however, that both of the names prevail; and that the root of *Cotyæum* still subsists in Kutahiah.

The general agreement of the distances, ancient and modern, between the supposed position of the *Kramians* and

\* General Koehler reckoned 25 hours between Sandukly and Kutahiah; his general date was 2.05 G. miles *per* hour; whence the result would be  $51\frac{1}{2}$  G. miles between Sandukly and Kutahiah.

† It appeared on the geographical construction of this quarter, that the distance arising on the mean time, given between Kutahiah and Iconium, is 136 G. miles, or  $5\frac{1}{2}$  less than the above result. So that it falls short of Xenophon's report by 14 G. miles, or about  $6\frac{1}{2}$  of his parasangas: 4 of which have been deducted from the 20, between *Tyriæum* and *Iconium*. But there are still  $2\frac{1}{2}$  in excess: and which perhaps may be placed to the account of over-rating the distance. The final difference, therefore, is small.

*Iconium*, proves to a certainty the error in the number of marches given between the *Kramians* and the *Plain of Caystrus*. For, if the text was followed, the three marches must have been of 28 miles each ! It may be proper also to remark, in this place, that the aggregate number of marches, summed up in the History, between *Ephesus* and the *field of battle in Babylonia*, exceeds the detail between *Sardis* and *that field*, by 7. Of these, between 3 and 4 may be deducted for the 63 M. P. between *Ephesus* and *Sardis* : and then three or four remain to be accounted for. Possibly then, it should have been 5 or 6, instead of 3 marches, between the *Kramians* and *Caystrus*. (See above page 26.)

Here it is proper to mention some circumstances respecting the position of *Peltæ*. It will be seen by the map No. II. that as the *Forum of the Kramians* falls at Kutahiah, Cyrus should have gone in a *northerly* direction, during the four marches to that place from *Celænæ*, (or Sandukly) ; whilst the general direction of his route was *easterly*. This might appear extraordinary, unless it was recollected that Cyrus was then making preparations for his expedition ; and was probably taking away the provisions and stores that had been collected for him, at different stations, situated within his government : for he may be said to have commenced his undeviating route towards his brother's capital, only at the *Forum of the Kramians*.

Now *Peltæ* is not distinctly recognised in modern geography, but may probably be the same with the *Peloti* of Edrisi (page 237), described to be situated in the road from *Tarsus* to *Abydus* (meaning the *Asian* castle of the Dardanelles). This road passes through *Belguessa*, taken for the *Belgers* of Paul Lucas : and if the distance between this latter, and the *Asian*

Castle, as given by Edrisi, be proportioned (for it falls short on the whole interval, on our construction, by about 11 miles), the position of *Peloti* falls in the place where we should have placed *Peltæ*: that is, at two marches from Sandukly, towards Kutahiah; considered respectively, as *Celænæ*, and the *Forum* of the *Kramians*.

Having thus adjusted the line of Cyrus's march between the *Kramians* and *Iconium*, in respect of the geographical construction, it will be proper to give certain particulars respecting the principal places on the road; and also concerning the physical geography of the countries, in which they are situated.

Kutahiah (or the *forum* of the *Kramians*), stands on the modern great road from Brusa (*olim Prusa ad Olympum*) to Cilicia, Syria, and Cyprus; through Iconium, &c.; and which, as well from the line of direction, as the nature of the country, was doubtless the general line of the ancient road, also. When therefore, Cyrus had arrived at Kutahiah, he would of course follow that road, which for upwards of 200 miles, leads through a succession of deep and extensive vallies, adjacent to the northern foot of the *Pisidian* and *Cilician* Taurus.\* On this supposition he would pass from the site of Kutahiah, to that of Karahissar (*Aufum*); and thence by those of Sakli, (or Ishakli),† Akshaher, Ilgoun, and Laodicea, to Iconium, or Kuniyah. (See the Maps No. I. and II.)

The first station mentioned, beyond the *Kramians*, is the *Plain* of *Caystrus*: said to be "a well peopled city." It is to be con-

\* See Mr. Baldwin's Journal in Col. Capper's Book of Travels. The author has also been obligingly furnished with the Journals of Major Leake, and Professor Carlyle, over the same ground.

† Not the Ishakli, taken by Dr. Pocock, for *Celænæ*.

cluded, of course, that it was a city in a plain, named *Caystrus*: and which plain, answers unequivocally to that, which extends between Aufium Karahissar, and Ladik (*Laodicea Combusta*); and which is a part of the above succession of flat vallies, or plains. It answers to the tract named by Strabo, *Phrygia Parorias*; extending along the northern range of *Taurus*.

The distance given from the *Kramians* to *Caystrus*, 30 parasangas, falls near Sakli, beforementioned; a town where the roads from Constantinople, Brusa, and Smyrna, pointing towards Syria, meet: and where, the country being fertile and well watered, a town is likely to have stood, in all civilized times. It may therefore, with some degree of probability, be supposed, that the city of *Caystrus* stood in this general position.\*

In order to understand the general nature of the tract, into which Cyrus had now entered, contiguous to the northern side of the region of Mount Taurus, it is proper to state, that there are several parallel ridges, and some of those very lofty, connected with the greater chain of Taurus, on the side towards *Phrygia* and *Cappadocia*. These, the ancients do not appear to have regarded as members of Taurus.

\* Sakli, as we learn from Dr. Pocock, and others, is also called *Seleukter*. Probably, it was one of the many cities, that were named *Seleucia*. If Seleucus, the victor in the battle named from *Ipsus*, (which decided the fate of Empire in Lower Asia, after the death of Alexander,) founded any city in commemoration of that victory, this may possibly be the place. The position of *Ipsus* has never been determined; but was said to be near *Synnada*. Sakli, however, is 25 miles from Synnada, to the southward; and precisely at the point of separation of the two roads that led to *Ephesus*, and to *Byzantium*, respectively, in the way from Syria.

Now the contending armies approached each other, along the great road leading from Syria and Cilicia, through the centre of Asia Minor, towards Synnada: and it is not

The spaces included between these secondary ridges and the principal one, may be considered as elevated vallies: an intermediate step, between the high level of Taurus, and the common level of the interior of Asia Minor. Some of them are of extent sufficient to form large provinces: and contain lakes, salt as well as fresh; formed of the waters from the adjacent heights; but pent up, by the inferior ridges.

Beginning from the westward, the first of these vallies included the *original* country of *Isauria*\*; noted for the extreme roughness and strength of its natural defences; situated in the recesses of its surrounding barrier of mountains. A second valley, but of a nature perfectly accessible, contains the just mentioned country of *Phrygia Parorias*. It is beautiful and well watered: in position, parallel to, and adjacent to *Isauria*, on the north; but a step lower, in point of level. Here too,

improbable that the army already in possession of Asia Minor, should post itself, so as to command both of the western roads abovementioned. The nature of the country, too, which consists of a well watered and fruitful valley, of no great breadth, but of vast length; formed by two parallel ridges, and having the great road leading through the centre of it, would make it an eligible post for an army, appointed to the defence of Asia Minor. This valley constituted the tract of *Phrygia Parorias*, before-mentioned.

The low mountains that cover the plain of Sakli to the north, are named in that part *Kesbier*: but whether this has any connexion with *Caystrus*, must be left to the judgment of the reader.

\* Here it may be proper to mention, that the name *Isauria* has been applied to different tracts of country, in different ages: or rather, has been extended from the country originally so named, (which lay to the northward of the great ridge of *Taurus*, and constituted a part of *Pisidia* at large), to the country of *Cilicia Trachea*, which lay (obliquely to the former), to the southward of *Taurus*. The subject has been confused; and it may be suspected, that Strabo himself did not clearly understand it. He appears to apply the name exclusively to *Cilicia Trachea*: but Pliny includes *both*, in his description.

the waters are all pent up, by a ridge, which is the *second* from the *main ridge* of Taurus; *Isauria* lying between.\*.

A third valley, more extensive than either of the former, included the country of *Lycaonia* (now Kuniyah): more resembling *Parorias Phrygia* than *Isauria*: being composed generally of large plains, subject to inundations; although a part of its waters escape northward, and form the western branch of the *Halys*. The ridge which shuts up *Lycaonia* to the north, is, in effect, a continuation of *Anti-Taurus*, westward: although Strabo limits that ridge to *Cataonia*.† On the SW. and SE., *Lycaonia* borders on *Pisidia* and on *Cilicia*.

A fourth valley (still going eastward) is that of *Tyana*, bordering on the *Cilician Taurus*; and containing the famous pass denominated occasionally from *Tyana*; but more commonly named *the Pass of Cilicia*, from the circumstance of the great military road leading through it, into *Cilicia*.

These are the vallies, which form the series, through which the route of Cyrus lay: and immediately on the east of *Tyana*, but *beyond* the line of his route, commences the very famous, rich, and extensive valley of *Cataonia*; anciently celebrated for its containing the Temple of *Comana* of *Cappadocia*; whose site is now recognised in Bostan.

There is however, no doubt, but that in latter times, the name was appropriated to *Cilicia Trachea*: for Ammianus Marcellinus describes *Isauria* as a *Maritime* country, absolutely. And it may be conceived, that at that time, the original *Isauria* had merged into the larger country of *Pisidia*: and was no longer known as a part of *Isauria*.

\* These parallel ridges, which thus confine the tract of *Phrygia Parorias* (the modern valley of Akshahr) are respectively named *Sultan Dag* and *Emir Dag*: *Sultan Dag* being to the south, the other to the north. *Kesbeir-dag* just mentioned, is a portion of *Emir-dag*.

† The mountains which cover *Lycaonia* on the north, are called by the Turks *Foodat Baba*.

Cyrus may be supposed to have entered the first of this series of vallies, near the present Karahissar (Aufium); and to have quitted the last, at the pass of *Tyana* or *Cilicia*.

From *Caystrus*, where we left Cyrus, he came in two marches, rated at 10 parasangas, to *Thymbrium*, a populous town;\* which was situated at a like distance, short of *Tyriæum*; before spoken of. *Thymbrium* ought therefore, to be at, or near the Karatapé of M. Niebuhr's map: nearly midway between Akshaher and Alguid (or Arkid) Khan of the same map: 8 miles short of Ilgoun, the supposed site of *Philomelium*.† The route was still through the valley of *Parorias* Phrygia: but which appears to terminate there; being separated from *Lycaonia*, by a hilly tract; on the edge of which, stood the town of *Laodicea Combusta* now named *Jorgan-Ladik*.

It was in the plain of *Tyriæum* that Cyrus reviewed his whole army, in order to gratify the queen of *Cilicia*; who had joined him at *Caystrus*.‡

The three marches between *Tyriæum* and *Iconium*, have already been spoken of.

\* This place was mistaken by M. D'Anville, for another of much the same name, where Cyrus the Great overcame Croesus (*Cyrop.* lib. vii.) But that field was evidently, by what followed, very near to Sardis: and is to be looked for, in the great plain, which opens to the eastward of Sardis, between Mount *Tmolus*, and the river *Hermus*: and which appears to be the *Cyrus Campus* of Strabo, page 629. Many *Tumuli* are now seen there: the modern name of the plain is from *Darius*: meaning *Royal*.

† The river Ilgoun is named *Baliam*, or *Paliam*, at this time.

‡ The Greeks were here drawn up *four deep*; whether it was the practice of that time, or to make the greatest display of the force; for in the Macedonian *Pbalanx*, *five* ranks presented their pikes to the front, according to Polybius.

## CHAPTER III.

FROM ICONIUM TO MYRIANDRUS; SITUATED AT THE GULF OF  
ISSUS.

---

ROUTE of Cyrus, through Lycaonia towards Tyana, near the northern foot of the Cilician Taurus—*The geographical position of Tyana, discussed—Passes of Taurus and Amanus, discriminated—Pass of Cilicia—gates of Syria, and Cilicia; or the Maritime pass—the two passes of Amanus—General Remarks—Cyrus, by a wide circuit, gains the Pass of Cilicia, at Tyana; whilst Menon goes by a more direct, but difficult Route—Description of the Pass of Cilicia, by Xenophon, and by Quintus Curtius—Transactions at Tyana or Dana—Plain of Cyrus—Cyrus descends through Cilicia Campestris, to Tarsus—Characteristic description of that Country, by Xenophon—Cyrus detained 20 days at Tarsus, through the unwillingness of the Auxiliaries, to proceed against the Great King—their scruples removed, by an Increase of Pay—March to Issus; with a comparison of the distance marched, with the Roman Itineraries, and with the modern Reports—Issus—Last reinforcement of Grecian Auxiliaries, arrives at Issus—Description of the Pass called the Gates of Syria and Cilicia; by Xenophon—His description differs totally from that by Arrian; as relating to a different Site: but both are perfectly clear and intelligible—*

*Intended mode of attack, of the Pass by Cyrus; but rendered unnecessary, by the retreat of the Enemy—Port and City of Myriandrus; a Phoenician Establishment—its Port now filled up by Alluvions; and the site far inland—Cyrus finally leaves the Sea Coast, and advances into Syria.*

FROM *Iconium* (at which place Cyrus made a halt of 3 days) his route led through the valley and country of *Lycaonia*, during five days march; which are given collectively, at 30 parasangas. This distance would bring him to a point nearly opposite to the site of the present *Erekli*: from whence the modern roads (and no doubt, the ancient ones, also) branch off to *Tarsus* CIRCUITOUSLY by *Tyana*, on the NE.; and to *Tarsus* DIRECT, by the SE. It being the object of Cyrus, to gain the pass of Cilicia, by the former route, he would of course, leave the site of *Erekli* some miles to the southward; to prevent a needless *detour*.\* That place stands at a few miles from the northern foot of the principal ridge of Mount *Taurus*; and at the eastern extremity of the valley of *Lycaonia*; for *Xenophon* remarks, that the end of the five marches from *Iconium*, *Lycaonia* terminated, and *Cappadocia* began. And here he entered the valley of *Tyana*.†

In order to explain the advantages arising from the use of the route by *Tyana* to *Tarsus*, although nearly twice as long

\* See the Map, No. II.

† It is not known what the ancient name of *Erekli* was; but it was probably one of the many places of the name of *Heraclea*. Many, including the author himself, have taken it for *Arbelais Colonia*; but that place not only stood much nearer to *Ancyra*, but was situated in *Cappadocia*: whilst the site of *Erekli* was in the tract anciently named *Lycaonia*, now *Kunyah*.

as the other ; it must be understood, that the ridge of Taurus, opposite to the town of Tyana, is contracted into a narrow space, or neck ; affording a short passage from the plain of Tyana, into the vales of Cilicia. But the direct route crosses a very wide mountainous belt ; so as to detain ordinary travellers 25 hours within it : and in certain places, presents obstacles to the progress of an army.\* Cyrus, therefore, wisely determined to pursue the former route ; but sent the Cilician queen, by the other, under the escort of Menon, the Thessalian. Cyrus himself, at the head of the grand army, reached Tyana in 4 marches from the station (opposite to Erekli) where Menon separated. These marches are given at 25 parasangas : and with the 30 from Iconium, make up an aggregate of about 152 British miles : giving nearly 17 for each of the nine marches. (See again the Map, No. II.)

Accordingly, these 9 marches are *beyond* the ordinary length, for so large a body of men : nor is there any mention made of any intervening halts. It is true, that the two intervals of 5, and 4 days, are well proportioned to the respective distances : but then, they are equal to 6 marches for the first ; 5 for the latter. It may have been, however, that they were lengthened in order to accomplish some plan of co-operation, with the fleet and detachment, expected at Tarsus ; concerning which more will be said, in the sequel :†

\* The principal Roman road from Asia Minor to Syria and Egypt, led through the pass of Tyana : and most probably, the great military road had always crossed Taurus at that point ; for the reasons just stated.

† The geographical position of Tyana depends on so many lines of distance, and circumstances, and those so much implicated, that the investigation took up several pages, in the Memoir respecting the Roman roads in Asia Minor, which will hereafter

From the circumstance of there being *several* passes leading into *Cilicia*, from the quarters of *Cappadocia* and *Syria*, much confusion has arisen, as well in ancient, as in modern times; from the want of their being more clearly discriminated. It will therefore be necessary to give the reader a general idea of their situation and description, in order that those made use of by Cyrus and Xenophon, (as well as by Alexander), may be distinctly understood.

These passes are in number FOUR.\*

The FIRST is properly the CILICIAN pass; leading over Mount *Taurus*, from the province of *Tyana* in *Cappadocia*, into CILICIA. Through this pass, Cyrus, Alexander, and Cicero (in his war with the *Amanenses*) entered Cilicia, in their way towards Syria. Through this pass also, the Roman road led: it being, as we have stated, the great military road, not only in the time of the Romans, but apparently, in that of the ancient Persian empire, also. And although there may be a difference

accompany the work intended to illustrate the geography of that celebrated Peninsula. The documents for the position of Tyana are, almost exclusively, ancient.

In a general point of view, it is determined in parallel, by its distance of 75 MP. in the Jerusalem Itinerary from Tarsus, northward; and in easting, by the distance of 39 MP. from *Baratba*, in the Theodosian Tables: taken for the *Bour*, which arises in the road from Erekli to Kisariah: and which accords with 55 parasangas of Xenophon, from *Iconium*. Again, it receives a check from the side of Kisariah, by its distance from Anabil, considered as the *Andabilis* of the Itineraries. This latter place was 16 MP. from Tyana, towards *Ancyra* (Anguri); and Anabil is 13 hours from Kisariah, through Develi-Kara-Hissar; which is itself 7 from Kisariah. There is no cross line of distance from the eastward, to Tyana.

The author is indebted to M. Niebuhr for the information respecting *Anabil*; without which, it would have been impossible to have formed the above combination of positions.

\* See the detailed plan of the Gulf of *Issus*, and its environs, in Map, No. II.

of opinion, concerning the *exact position* of this pass, there can be no danger of confounding it, with any of the others.

The SECOND is that, formed by the near approach of the foot of mount *Amanus* to the *Sinus Issicus*: and it has therefore this characteristic distinction, that it is a *maritime* pass; whereas, all the others are situated *inland*. As it forms a prominent feature in the warfare both of Cyrus and of Alexander, it is consequently spoken of by their respective historians, Xenophon and Arrian: but it is proper to apprise the reader, that their descriptions refer to *distinct sités*; although *very near* to each other: that of Xenophon being in a narrow plain, contiguous to the sea; and that of Arrian, at the ascent of the hills that shut up the same plain, at a short distance towards the south: and also as near the sea, as such a situation would admit.\*

To this pass, different names have been applied; and different positions assigned. Arrian, in one place, names it the *Persian Gates*; and in another, the strait that divides *Cilicia* from *Assyria*.† Xenophon says, *the gates of Cilicia and Syria*; because, in his time, the narrow plain by the sea, (which *then* constituted the pass) was shut up, with a double wall and gates: one looking towards *Cilicia*; the other towards *Syria*.

Strabo does not seem to have been aware of the existence of any such pass, or passes. Neither of them, perhaps, appeared to him, at that day, to possess the character of a pass; which is undoubtedly that, of partaking of the nature of a *defile*. For as he lived at about 400 years after Xenophon, the plain in which the *lower* pass was situated, might in that course of time, have been widened by accretion (since it is now become,

\* See again the same plan.

† That is, *Assyria* at large; of which *Syria* made a part.

by that process, a wide plain) so as to have lost all resemblance to the description in Xenophon; and that, without exciting in the mind of Strabo, any idea of so great a change. And the *upper* pass was only such, as far as regarded the straitening of the front of the assailant, who might attack it.

But one is surprised to think how any reader of military history, (and such Strabo must surely have been), could possibly reconcile the history of the warfare of Alexander and Darius, in this place; any more than the movements of Cyrus; without conceiving the existence of a maritime pass, between *Issus* and *Myriandrus*. For, in the one case, ships were to be employed in the attack of the pass: in the other, a boat was sent from *Myriandrus* along shore to reconnoitre the Persians at *Issus*; the pass lying between!

Nor would it appear that Strabo had a clear idea of the ground, around the *Gulph* of *Issus*: because his description is so very general, when it was required to be particular. But concerning the *lower* or inland pass of *Amanus*, he seems to have been very well informed.\*

To prevent confusion between the pass at the *sea side*, which is the subject of the present article; and those which lead *over*, or *through*, mount *Amanus*, it may be convenient to name this, the MARITIME pass.†

\* Strabo, page 676.

† Ptolemy describes two passes. One of these is on the shore of the gulf of *Issus*, and at the place, where Mount *Amanus* closes on that shore. It occupies, in effect, the place of the *maritime* pass, in respect of *Issus*; but he names it the *Gates* of *Amanus*. One may surely suppose that he intended the maritime pass.

The other pass is inland; and occupies the place of Strabo's *Gates* of *Amanus* (our *lower* pass;) but it is named by Ptolemy, the *Syrian Gates*. And indeed the name, taken absolutely, is a very proper one: since it is the entrance into Syria, through

The THIRD pass is that named by Strabo the *Amanides Pylæ*, or “*Gates of Amanus* :” and is the pass, by which the ordinary road from the sea coast of the gulf of *Issus*, leads into the inland parts of Syria, through the mountains behind Alexandretta. It is situated at the southern termination of the chain of *Amanus*; and serves to connect it with that of *Pieria*, by a narrow neck, which itself constitutes the pass. This is named in modern times from the village of Bylan; and answers to the *Pictanus* of the Jerusalem Itinerary. 9 M. P. inland from *Alexandria*. (See again the gulf of *Issus* in No. II.)

This pass is in effect the LOWER, or southern pass of *Amanus*. Strabo, it has been said, was well informed, respecting it. For in page 676, he says, after mentioning *Ægææ*, “ then “ come the *Amanides Pylæ*, or *Gates of Amanus*, having a place “ fit for a harbour. At these gates, *M. Amanus* terminates: \* “ a mountain branching from *Taurus*, and overhanging the “ eastern frontier of *Cilicia*.” †

Also in page 751, he says, “ contiguous to *Gindarus*, there “ is, in the territory of *Antioch*, a place called *Pagræ*, strongly “ fortified, and situate upon the ascent of mount *Amanus*, leading from the gates of *Amanus* into Syria.” †

Here then, is the same pass, described from the opposite quarters. First from the side of the gulf of *Issus*, where it

*Amanus*. But no other person seems to have applied the name of *Amanus* to the pass on the shore of the Gulf of *Issus*; although it be formed by the near approach of *Amanus* to the shore: for the passes of *Amanus* were more properly those which led across it.

\* In page 751, Strabo says, “ Near the sea is the city *Seleucia*, and *Pieria*, a mountain contiguous to *Amanus*.” So that *Pieria* is included between the pass of *Amanus* and *Seleucia*. This fact also serves to shew that Strabo’s gates of *Amanus*, answer to the pass of Bylan.

† These passages were translated by Dr. Gillies.

is said, there is a place proper for a port: and which one naturally refers to the recess of the gulf, towards *Myriandrus*; which recess, before the filling up of the bay, by alluvions, may be supposed to have approached the foot of the ascent, leading up to the pass. And secondly, it is given with more detail, from the plain of *Antioch*; above which plain, *Pagræ*, or *Pagris* is recognised in *Begras*, a fort on the ascent of *Amanus*; and at the opening towards the plain, of the *Gap* which contains the pass in question: and which forms the separation between *Amanus* and *Pieria*.

The FOURTH, and last pass to be considered, here, is the *upper* or northern pass of *Amanus*. This leads partly *over*, and partly *through* the chain of *Amanus*, a little to the southward of *Issus*; and apparently, opens into the valley, through which the river *Pinarus* descends. This, and the foregoing pass, should be the *two* passes through *Amanus*, mentioned by Cicero: and the upper one is that, by which Darius came to *Issus*, whilst Alexander lay behind him, at *Myriandrus*. It appears to have been unknown to Strabo; although no clear conception of the movements of Alexander and Darius, could take place, without supposing the existence of such a pass; as well as a maritime pass.\*

\* The author possesses no means of fixing the *precise* situation of this pass: but in point of parallel, it must lie between the *maritime* strait and *Issus*; because Darius, who passed through it in his way from *Syria* to *Issus*, avoided the maritime pass, and came into *Cilicia*, near *Issus*; and also appears to have fled through it, by way of the valley that opened into the field of battle. And moreover because Cicero, when he took a position for covering *Cilicia* from the threatened attack of the Parthians, from *Syria*, through *both* of the passes of *Amanus*, formed his camp a little to the northward of *Issus*.

Dr. Patrick Russell had occasion to know, personally, that there was a direct com-

Cyrus's route led him through the *first three* of these passes ; although the last of the three, the *lower* pass of *Amanus*, is not spoken of, by Xenophon. One can only account for this silence, by their having met with no opposition there : the enemy having fled, from the maritime pass, towards the Euphrates ; and abandoned all idea of making a stand, short of *Babylonia*.\*

In order to prevent any doubt in the mind of the reader, on occasion of certain vague and inaccurate ideas, which occur in some of the books of modern Travels, respecting the pass of Cilicia ; it will be proper, in this place, to contrast the ancient descriptions of the real pass, with the modern descriptions, of the assumed one.

The modern road between Constantinople and Syria, as well for the Turkish armies, as for ordinary travellers, crosses *M. Taurus* (called in that place, Ramadan Oglu) by the route, by which Cyrus sent Menon, with the Cilician queen ; (see above, page 37) ; and which mountain is there of such a breadth, as to require 25 hours for ordinary travellers to cross it. Several difficult places, also, occur by the way : but the *pass* itself is situated at the *final descent* into Cilicia ; and

munication between *Killis* and *Ayasse*, by a narrow and difficult passage, through *Amanus* : and Dr. Pocock says, " on the *south* side of *Bayas*, there is a mountain " torrent, which comes from the opening, *by which there is an ascent to the gates of " Amanus.*" Here it is proper to remark, that Dr. Pocock took *Bayas* for *Issus* ; and its river for the *Pinarus*. And indeed both of these accounts apply *generally* to the position, in which the pass, through which Darius came, and also retired, would naturally be looked for.

\* Nor does Arrian mention this pass : but then his history does not profess to give any details, between *Issus* and *Tyre*.

within 24 or 25 Roman miles of *Tarsus*. It is named *Geulek*; from the name of a ruined castle, or tower, situated above the pass.

Now the *Cilician Pass* of Cyrus and of Alexander, was situated in the direct road from *Cæsarea Mazaca*, which lay due north from *Tarsus*: whilst, on the contrary, *Geulek* lies in the way from *Iconium* and *Erekli*, which are to the WNW. of *Tarsus*. But the grand points of discrimination are, the different *aspects* of the *ascents*; and the great diversity in the distances of the two passes, from *Tarsus*: for those who come from the side of *Cappadocia* (that is, from *Cæsarea* and *Tyana*) ASCEND the NORTHERN face of *Taurus*, by the CILICIAN pass, near *Tyana*, about 75 Roman miles to the northward of *Tarsus*; whilst, on the contrary, those who come from the side of *Iconium*, and *Erekli*, DESCEND the SOUTHERN face of *Taurus*, by the pass of GEULEK; at about 25 such miles only, from *Tarsus*. One more point of contrast, is, that after ascending by the Cilician pass, the ridge of *Taurus* is narrow, affording a short passage into the vallies of Cilicia: but previous to the descent at *Geulek*, the road leads through a mountainous belt; which requires 25 hours to cross. A wider difference in the description of the two passes can hardly be imagined.

The pass of *Cilicia*, to which we have now brought Cyrus, is situated at the distance of a few miles to the southward of the city of *Tyana*; from which the pass itself is often denominated. It is thus described by Xenophon: (Lib. I. c. 8.)

“The entrance was just broad enough for a chariot to pass; very steep, and inaccessible to an army, if there had been any opposition.” Curtius (lib. III. 4.) calls it a *narrow*

*strait*: and says that it is naturally so strong, as if fortified by the hand of man. He says also, that Alexander was sensible of his good fortune, in finding the pass abandoned by the enemy, before his approach: since his army might have been demolished by *stones rolled down* from the mountain. And that the road was so narrow, that four men could hardly pass, abreast; and the mountain hanging over it. Nor was it difficult only, on the score of its straitness, but also from being furrowed and broken, by the torrents that occasionally ran from the mountain.\* Arrian does not *describe* the pass: nor does Strabo. Cicero, also, is silent; although it must be clearly understood, that he entered Cilicia by this pass, from the quarter of *Cybistra*.†

Cyrus, on his arrival at the city of *Tyana*,‡ found the pass

\* It may be truly remarked, that the description of the pass of *Geulek*, itself, is exceedingly like that of *Cilicia*; being a deep and narrow ravine, which has a rapid descent from the brow of the mountain. (See Mr. Baldwin's Journal, in Col. Capper's Book). But it must be considered, that both of them, (as well as many others, elsewhere), owe their origin to torrents which descend from the mountain; and have, in the course of ages, worn deep ravines, with sides too steep to be scaled. The characteristic difference between the two passes, arises from their different *aspects*; one facing the *north*, the other, the *south*.

† In the History of the Expedition of Cyrus, in Diodorus Siculus (Lib. XIV. c. 5.) there are the descriptions of *two* passes: the first *intended* for the Cilician pass; the other for the Maritime pass. The first description confounds the Cilician pass, "*the narrow defile formed by high inaccessible mountains*," with the "*walls and gates*" of the Maritime pass. And the second confounds the Maritime pass, that is, one "*having walls and gates, and being near the Sea*," with the inland and lower pass of *Amanus* "*formed by the meeting of two mountains*," the one of which is said to be "*a continuation of M. Libanus: i. e., Pieria*."

‡ Called by Xenophon, (or more probably corrupted, by copyists,) *Dana*. It was originally named *Tboana*, from a king of the *Tauri*, as we learn from Arrian in his Periplus of the Euxine Sea. The ☉ had probably been converted into a Δ.

in the power of the king of Cilicia, who had possessed himself of the eminences above it. He therefore encamped in the plain before it, since denominated from him, *the Plain of Cyrus*.<sup>\*</sup> But on the arrival of intelligence that Menon had already penetrated within the mountains; and that the fleet of Cyrus was on the way from Ionia, with a body of Greek auxiliaries on board, the pass was abandoned, and "he marched up the mountain, without opposition."<sup>†</sup> As 8 days had elapsed since the time of Menon's separation, to Cyrus's taking possession of the pass (he having halted 3 days at Tyana, and one in the plain, at the foot of the pass), the king might easily have learnt the news of Menon's arrival at Tarsus. For 5 days brought him within the mountains; and less than 2 more, would convey the intelligence of it to the king.

Passing Mount *Taurus*, Cyrus descended into the beautiful province of *Cilicia Campestris*. It is implied that the breadth of the mountain was not great; for it appears that he soon descended, after gaining the summit of the pass.

Xenophon says, that after Cyrus *left the mountains*, he advanced through the plain, and having made 25 parasangas in four days march, arrived at *Tarsus*. But the Jerusalem Itinerary allows no more than 75 Roman miles between *Tyana* and *Tarsus*. Probably therefore, the 25 parasangas describe the

\* Arrian (Lib. II.) rightly, it may be conceived, supposes, that this plain was first denominated from the younger Cyrus: but Curtius (Lib. III). says it was from Cyrus the great, when he marched against Croesus. A plain denominated from the latter was situated on the east of Sardis and *M. Tmolus*. There is a possibility however, of Curtius's being right: but he errs exceedingly respecting *Lyrnessus* and *Thebe*, in the same chapter.

† The words of Xenophon, Lib. I. c. 8.

distance from Tyana ; and the 4 marches, that from the brow of the mountain, towards Cilicia.

His description of this country appears to be no less beautiful, than just. From the mountains (*Taurus*), “ Cyrus descended into a large and beautiful plain, well watered, and “ full of all sorts of trees and vines : it abounds in grain of “ various kinds ; and is surrounded with a strong and high “ ridge of hills, from sea to sea.” (Lib. I. c. 8.)

Tarsus he describes as a great and rich city, in which stood the palace of the king (Syennesis) : the *Cydnus* flowing through the middle of the city. Menon had arrived 5 days before Cyrus : which is accounted for, above, in the disposition of the time. (See again No. II.)

It has been remarked (in page 37,) that the marches between *Iconium* and *Tyana* were very long : but that, if the numbers be truly reported, a reason might possibly be assigned for the expedition : which is, that as the pass was to be cleared, by the joint exertions of Cyrus, of Menon, and of the detachment on board the Fleet, (although operating in different places,) it was of importance that Cyrus should be at *his* station, as early as possible.

At Tarsus, Cyrus staid no less than 20 days. This great delay seems to have been occasioned, chiefly, by the unwillingness of his Grecian auxiliaries, to proceed, on so dangerous a service, as the attempt to dethrone the reigning king of Persia : for the secret of the expedition could no longer be concealed. But they were at length prevailed on, by an increase of pay :\* and an assurance that Cyrus only meant to march

\* Their pay had been originally a *Daric* per month ; and it was now increased to a *Daric* and a half. A *Daric* is reckoned to have been about 13 shillings ; or strictly

against Abrocomas, one of the Persian generals, whom he represented to be at the head of an army, at the Euphrates, 12 marches from Tarsus.\*

From Tarsus, Cyrus pursued his march eastward, through *Cilicia*; passing successively the rivers *Sarus* and *Pyramus* (the *Seihan* and *Jeihan*, of the present times). Two marches, of 5 parasangas each, brought him to the *Sarus*;† and a 3d of the same length, to the *Pyramus*. Over this ground and onwards to *Myriandrus*, his route has been compared, in detail, with the Roman Itineraries; and with the reports of modern travellers: and the agreement is found, on the whole, to be very close; the parasanga being equal to 3 Roman miles, reckoning 75 of these to a degree. (See the opposite Table.)

From the *Pyramus* he came in two marches to *Issus* (c. 17) said to be "the last town of *Cilicia*, situated near the sea; "a large city, rich, and well-inhabited." This place is with the greatest reason supposed to have stood on the site of the present village of *Oseler*, found in M. Niebuhr's map of the Gulph of Scanderoone, and its environs; in the second volume of his *Travels in Persia*, &c.

But the *two* marches are given at *fifteen* parasangas; which, if correct, would give about 21 B. miles for each march. The ground between the present town of *Messis* on the

12,92. The allowances of a British sepoy, in the field, are about equal to this increased pay.

\* This number appears to be altogether vague; as no part of the Euphrates, in the line of Cyrus's march, was less than 16 or 17 marches from Tarsus. But he purposely under-rated the distance, of course.

† The name is *Pharus* in the *Anabasis*; no doubt an error.

Jeihan, (*olim Mopsuestia*) and Oseler, gives no more than about

The distance as given by Xenophon, by the Jerusalem Itinerary, and the modern authorities, between Tarsus and the Syrian strait; compared.

Jerusalem Itinerary.	Roman miles, of 75 to 1°	Modern Authorities.	British miles 69½ to 1°	Equal to Roman miles.	Xenophon.	Paras. 25 to 1°	Equal to Roman miles.

N.B. The modern distances are from a mean of 5 different reports: and the Jerusalem Itinerary agrees with the Antonine and Theod. Tables, as far as the latter go.

38 B. miles, or 19 for each march: but the difference may probably be accounted for, in that Xenophon reckons from *the river*, which might have been crossed at a point farther distant from *Issus*, than *Messis* is from *Oseler*: so that the difference between the 38 (or  $38\frac{1}{4}$ ) and 42 British miles, which answer nearly to the 15 parasangas, may be chiefly occasioned by the above circumstance: for it is certain that the *whole* distance from *Tarsus* to *Oseler*, agrees very nearly.\*

The disproportionate length of these two marches, to the preceding and succeeding ones, of 14 miles each, may probably be accounted for, in that *Cyrus* wished to arrive at *Issus* before the expected reinforcement of Greeks, by sea, under *Cheirisophus*: and perhaps also to be nearer at hand for the attack of the Syrian pass (or strait); where he expected to meet with resistance. It appears that he intended to make use of the ships, if necessary, in the attack of the fortress at the pass, situated on the shore of the Gulph of *Issus*; although in the sequel the enemy retired, and left it open to him.

At *Issus*, accordingly, *Cyrus* received a reinforcement of 700 heavy-armed Greeks, under *Cheirisophus*; sent from *Ephesus* and *Peloponnesus*; as also his expected supplies. And here also 400 other heavy-armed Greeks came to him, having left the service of *Abrocomas*. His fleet now consisted of 60 ships.†

The pass called *the Gates of Cilicia and Syria*, and known

\* It is conceived that no interval of distance, on this whole route, is better known than that between *Tarsus* and *Alexandria*; as well from modern accounts as from the ancient Itineraries; a specimen of which has been just given.

† In all the space between *Tarsus* and *Myriandrus*, *Xenophon* mentions no town save *Issus*: and in other places, as well as this, he prefers the mention of the rivers to the

also by the names of the *Syrian Strait* and *Maritime Pass*, from its being formed by the near approach of M. *Amanus* to the sea, (see above page 39) was situated at the distance of one ordinary march, or 5 parasangas, southward from *Issus*; and at a like distance from *Myriandrus*, northwards, and was itself at that day reckoned the common boundary of Cilicia and Syria.

Xenophon thus describes it: (lib. I. 18) " The Gates of  
" *Cilicia* and *Syria* were two fortresses; of which the inner,  
" next *Cilicia*, was possessed by Syennesis, with a guard of  
" *Cilicians*; and the outer, next to *Syria*, was said to be de-  
" fended by the king's troops: between these two fortresses  
" runs a river called *Kersus*, 100 feet in breadth. The interval  
" between them was three stadia, in the whole; through which  
" it was not possible to force a way; for the pass was nar-  
" row, the fortresses reaching down to the sea, and above  
" were inaccessible rocks. In both these fortresses stood the  
" Gates."

The space between the *two fortified lines*, facing the opposite quarters, (for such they must be considered) being no more than three stadia, or little more than 500 yards, in length, along the coast, and yet large enough to contain a considerable force, proves that there must have been a considerable space between the rocky face of the mountains and the sea: and that nothing like a *defile*, or very narrow space, was intended. For when Xenophon says, that the pass was *narrow*, he could only mean in reference to a front formed for an attack; since

towns that stood near them. Of the two, the rivers (where the line of march is known) as being permanent objects, appear to be the best choice, of a *single* object; but the mention of *both* would have been more for the benefit of Geography.

there was width enough for a fortress; and that fortress large enough to contain a considerable force.

The strait described by Xenophon, was therefore formed apparently, by a narrow border of low land, at the foot of high steep cliffs; and having a small river running through it to the sea. In a corresponding position, in respect of Oseler, (which was no doubt the site of *Issus*) a like river, named at present *Mahersy*, and issuing from a *cleft* in the high land; \* flows through a tract of very low swampy land,  $\frac{3}{4}$  of a mile in breadth, between the hills and the sea; and which has every appearance of having been formed from alluvions, produced by the joint operation of the river and the sea. And it may reasonably be concluded that the site of the fortresses in the time of Xenophon, owed its formation to the same cause: and which has been progressively adding other new land, in the sea, until the ground of the strait has been extended into an ample plain.† It may be added that a castle, named *Merkes*, stands on a commanding eminence over the river: and has either communicated its name to the river, or derived its own from it. One may easily perceive the connection between it and the *Kersus* of Xenophon: and the *h* of *Mahersy* is probably guttural.

Thus the position of this pass seems to be clearly made out;

\* Dr. Pocock's Travels, Vol. II. Part 1st. p. 176.

† The like circumstances have taken place at *Thermopylae*, in Greece; where the land and sea alluvions collectively, but chiefly the latter, have filled up a portion of the *Malian Gulf*, and formed a wide stripe of low land, contiguous to what *was* the *narrow strait*. One is sorry for a change which has destroyed an important feature of a scene so interesting in its history, and so classical in its nature: however, there are landmarks enough remaining, to identify the scene, with the description of it in Herodotus.

although it has been overlooked hitherto, because it would appear that people expected something in the nature of a *defile* or *very narrow passage*; but certainly nothing of that kind is intended by the ancient descriptions of the *Syrian Strait*, either by Xenophon or Arrian. The former, it has appeared, describes it in a *low* situation; and the latter in an *elevated* one, referring to different positions, though very near each other.

It may be proper in this place to add a word respecting Arrian's description of the Strait, which Alexander passed through, about 70 years after Cyrus. His description is that of a *narrow passage over hills*; evidently *not a defile*, but that kind of ground which would compel an assailant to form a very straitened front for an attack. But the different sites alluded to by the two Historians, can hardly be a mile from each other; the ground being particularly described by Dr. Pocock, Mr. Drummond, and others. For within that distance, southward from the river *Mahersy*, the swampy plain is shut up by a narrow tract of hills, which has on the one hand an abrupt descent to the sea; and on the other, the steep mountain of *Amanus*, which leaves only a narrow space, in the nature of a *shelf*, between its foot and the sea. And this must be conceived to be the pass intended by Arrian; for he describes the advanced-guard of the army of Alexander, to have taken possession of the *pass*, on the evening before the battle of *Issus*: and who at day-break, "*began to descend from the hills*; being confined to a very narrow front, by reason of the straitness of the ground." (Lib. II.)

This Maritime pass (or rather *these passes*) could only have been situated between Bayas (*Baia*) and Scanderoone (site of *Alexandria*); because in that quarter the mountains approach

very near to the shore of the Gulph of *Issus* : and that on the opposite (or north) side of Bayas, the mountain gradually recedes from the shore.\* In point of distance also, the accordance is very close. The river Mahersy, taken for the *Kersus* of Xenophon, is about  $7\frac{1}{4}$  British miles to the southward of Bayas ; and this latter is  $6\frac{3}{4}$  south of Oseler, taken for *Issus*. So that here is an aggregate of 14 British miles, or as nearly as possible to 15 Roman ; which (as is shown elsewhere) are equal to five parasangas of Xenophon's scale ; and this is the distance assigned to the pass from Issus. The hill pass of Arrian may be about a mile farther to the south.

Arrian takes no notice of any fortress, wall, or other artificial impediment to Alexander's progress at the hill pass. But it would appear that at some time there has been a wall or fortress there : for the bases of two piers of a gateway are now seen there.† These are vulgarly named Jonas's pillars.

The mode in which Cyrus intended to attack the fortified pass in the plain, throws some light on the nature of the place. We have seen that it was formed of two parallel walls, at 500 yards or more assunder ; and reaching down from the cliffs, or front of the mountains, to the sea ; across a narrow slip of land, which although not designated as a plain, appears by circumstances to have been such ; and also open to the sea. For it is said by Xenophon, that " Cyrus, in order to gain the " pass, sent for his ships, that, by landing his men both within

\* Both the Ancients and Moderns, seem to have regarded all the narrow space between the mountains of *Amanus* and the sea, as a kind of strait : and indeed not improperly, where large armies were to act.

† They have been described by Messrs. Pocock and Drummond, Dr. Patrick Russell, and others.

“ and without the gates, they might force their way through “ the *Syrian* gate,\* if defended by the enemy.” (Lib. I. c. 18.) The pass however, was abandoned ; but the plan of attack seems to show, that the shore must have been *flat*, or at least, *not steep* ; in order to make such a plan feasible. For hills whose bases are beaten on by a wave, will be rendered steep by those bases being torn away by the surge, in rough weather. Cyrus would not have directed his troops to climb up a steep ascent ; and that ascent a long one, (as may be gathered from the description in Arrian,) in the face of an enemy in great force.

It may be added, that all the streams in this Gulf pass through plains (probably of their own creation,) before they gain the sea.

*Myriandrus* was the next place of encampment of Cyrus, 5 parasangas beyond the pass, and situated at the south-east corner of the *Sinus Issicus*. According to Xenophon, (Lib. I. c. 19.) it was “ a *Phœnician* city ; a mart-town ; and many “ merchant ships lay at anchor before it.”†

\* That is, of course, the gate *towards* Syria, or the southernmost.

† Herodotus also speaks of *Myriandrus* as being situated on a bay of the same name, which seems to imply that it was the place of the most consequence on the Gulf of *Issus*, at that day ; as *Issus* at a later period ; and as *Ayasse* and *Scanderoone* have been successively, in modern times : each of which has, in turn, given its name to the gulf.

The common boundary of *Cilicia* and *Syria* is placed by Xenophon at the maritime pass, five parasangas to the southward of *Issus* ; which leaves to Syria, (or rather to *Phœnicia*, as then divided) the southern coast and eastern angle of the Gulf of *Issus* ; and to *Cilicia* the narrow tract, on which the memorable acts of Alexander and Darius took place about 70 years afterwards. To make the matter still clearer, Xenophon says that they marched five parasangas *through Syria*, to *Myriandrus*.

But Strabo, p. 676, and 751, assigns the mountains of *Amanus* and its *pass*, for the common boundary ; which they might have been in his time.

At that time, the port of *Myriandrus*, appears to have been much better sheltered than that of *Issus*; being, by its retired situation, much less exposed to the sea-winds; but now the bay and port are filled up by depositions.

*Myriandrus*, it has been said, stood at two marches to the southward of *Issus*: and both Xenophon and Arrian agree in this report. Moreover, the former states the *distance*, likewise; which was 10 parasangas, equal to 30 Roman miles. Of these, the first 15 terminating at the river *Kersus* or *Mahersy*, leaves of course 15 more for *Myriandrus*. But the present S. E. angle of the Gulf of Scanderoone, is not quite 7 such miles from the *Mahersy*! It cannot be supposed, from the plan of the ground, taken by Mr. Drummond,\* that the Gulf could ever have extended southward 8 Roman miles beyond the present S. E. angle; but 6 or more it certainly might. At the same time being ignorant of the exact form of the gulf at that time, it cannot be known how much ground might have been lost in coasting that part of its shore. Yet it may fairly be concluded, that the distance is over-rated in some degree.

Thus, in either case, the site of *Myriandrus* must be looked for at a great distance inland. The coast in that part forms a kind of deep bay, the recess of which is filled up with the sand and mud washed down by the land-floods and rivers, from the adjacent mountains of *Amanus* and *Pieria*; and probably aided by the alluvions, which the current from the south has deposited in the recess: so that the site of *Myriandrus* is 4 or 5 miles inland.

\* See the map in Mr. Drummond's Travels in Syria, at page 205.

Mr. Drummond says (Travels, p. 124), that this tract "cannot be approached by man or horse, until the summer has dried up the bogs." Mr. Volney, (vol. 2, p. 27,) says, that "the plain on which Alexandretta is built, which is a league in breadth, has been formed by the earth brought down by the torrents:" and that it is so low and flat, that the rivulets, finding no declivity, can never reach the sea; and therefore form morasses. And this process continually going on, the new land is extended: and that already formed is in some degree raised, as both processes necessarily go on together.

Some ancient ruins were observed by Mr. Beawes (in 1745) near *Jacob's Well*, a spring situated at nearly  $4\frac{1}{4}$  Roman miles to the south of Alexandretta, in Mr. Drummond's map; and at the termination of the morass inland. This appears to be a very probable situation for *Myriandrus*; as well in point of general distance from the maritime pass, as from the nature of the place. And accordingly it may have stood 6 Roman miles (by the road) from the present S. E. angle of the Gulf, which being itself nearly 7 from the Mahersy river, 13 of the 15 reported by Xenophon, are made out. Not that we should venture to decide absolutely, that any deficiency existed; since two such respectable authorities report the distance to be equal to the length of a march. *Myriandrus* may have stood more to the west than is here supposed, and the shore of the Gulf may have lengthened the road. It is hoped, however, that this general arrangement will satisfy the reader, that the bay has been filled up; and that the site of the place, which was a maritime port, is now far within the present shore.

At this place Cyrus staid 7 days. As he was now to take

his final leave of the sea coast, he would of course unload the stores and provisions, from on board his fleet. And from what Xenophon says at the end of the first book ; that, the European auxiliaries of Cyrus, received many indulgences and comforts that were of course denied to the bulk of the army ; and which employed so great a number of carriages to transport the means of furnishing ; it may be supposed that those necessities formed a considerable part of the lading of the fleet.

## CHAPTER IV.

FROM MYRIANDRUS TO THE PYLÆ, AT THE ENTRANCE INTO  
BABYLONIA.

*Detail of the March of Cyrus through Syria, to Thapsacus—Apparent transposition of particulars, in the Anabasis—Thapsacus, a ford, and an important pass over the Euphrates: the Tiphseh of Scripture—River Chalus or Chalcis—Source of the Daradax recognised in the remarkable fountain of Fay—Park and Palace of Belesis—the Araxes of Xenophon, the Chaboras, or Khabour—Site of Circesium, or Carchamis—Desert of Mesopotamia—Distressing March of 18 days through it, to the Pylæ, and Plains of Babylonia—Difficulty of arranging the suite of positions between the Pylæ and Sitace—Mode adopted—Digression explanatory of the nature and positions of the Canals of Communication between the Euphrates and Tigris—Sources of those rivers in Armenia—Changes in the lower parts of their Courses—Euphrates runs on a higher level, and discharges into the Tigris, by the Canals of Communication—Periodical Swellings, and comparative Bulk of the two Rivers—the positions of the Canals assist in tracing the route of Cyrus and Xenophon in Babylonia.*

FROM Myriandrus,\* Cyrus is said to have made 12 marches to Thapsacus, on the Euphrates; that is 4 to the river Chalus;

\* In the account of the progress of Cyrus's army, nothing is said respecting the nature

5 from thence to the source of the river *Daradax*; and finally, 3 to *Thapsacus*. Here he crossed the Euphrates, at a ford, into *Mesopotamia*; and at 9 marches farther, according to the history, came to the river *Araxes*, which falls into the Euphrates; in all 21 marches from *Myriandrus*, to the conflux of the *Araxes* with the *Euphrates*. The distance in parasangas, is given at 115; equal to about  $15\frac{1}{4}$  B. miles for each march, taken at a mean. (Lib. I. c. 21, 23.)

On the construction, the most direct line that can be drawn from *Myriandrus*, through the supposed fountain of *Daradax*, and thence to the Euphrates, and along it, in the course that an army may be supposed to march, is 220 G. miles; falling short of 21 mean marches by 2 or 3 miles only. So that in a general point of view, the history may be said to agree remarkably well with the construction; reckoning by *marches*; but by the *distance given*, the excess is nearly 10 parasangas more than the ground allows.

Thus much for the agreement of the general distance, by the marches, but there appears to be a great error in the arrangement of the particulars.

For if 12 mean marches, equal to  $127\frac{1}{4}$  G. miles direct, be laid off from *Myriandrus*, through Fay Fountain, (the supposed *Daradax*) to the side of the Euphrates, according to the history, they will fall between 6 and 7 marches short of the supposed position of *Thapsacus*; which is doubtless that of the present El Dar.

Xenophon describes *Thapsacus* as "a large and flourishing city:" as indeed it continued to be in Roman times; but as of the countries through which they passed, until they arrived at the Desert beyond the *Araxes*.

no city is known to have stood in the situation pointed out in the *Anabasis*, one must suppose with M. D'Anville, (Euphrates and Tigris, p. 23,) that Xenophon has *transposed* the two lines of distance; and that it ought to stand thus:

From the Daradax to Thapsacus 9 Days.

Thapsacus to the Araxes 3

And if 18 marches, equal to  $190\frac{3}{4}$  G. miles in direct distance, be laid off from *Myriandrus*, (that is 9 to the *Daradax*, and 9 more to *Thapsacus*,) they will fall at a point only 4 or 5 miles short of El Dar; which place, by this calculation, would therefore be about  $18\frac{1}{2}$  marches from *Myriandrus*. It is true that El Dar is no more than about two marches and a half from the Khabour river (*Araxes*); but it is to be recollected, that Xenophon neglects the *fractions* of marches and parasangas; and that the whole distance, reckoned by mean marches, accords within 2 or 3 miles on a line of 220; so that the general agreement is satisfactory.\*

This position of *Thapsacus*, agrees with what Diodorus

\* On the Geographical construction, the distances are as follow:

From *Myriandrus* to the nearest part of the Koik river (*Cbalus*) 47 G. miles.

To the Fountain of Fay, (*Daradax*) - - - 45

To Dar (*Thapsacus*) - - - 103

195

From Dar to the conflux of the Khabour and Euphrates 25

Total 220

Twenty-one marches would require - - - 222 $\frac{1}{2}$

By the Geographical construction, as well here as elsewhere, is meant the new system of Geography of Asia minor and western Asia in general, formed by the author; and on which the whole geography of the tract, which includes the scene of the Expedition and Retreat, is founded.

relates (Lib. xiv. c. 5); which is, that Cyrus made 20 marches between the *Gates of Syria* and *Thapsacus*. Dar, as we have seen, is about  $18\frac{1}{2}$  marches from *Myriandrus*; to which if one be added, for the distance of the latter from the Syrian strait, there will be a total of  $19\frac{1}{2}$ , which comes so near to the idea of Diodorus, that we must believe that Xenophon has transposed the two distances; as he has done the places of the rivers *Thermodon* and *Halys*, in the 6th book.

Had the circumstances of the case rested on the bare fact of crossing the Euphrates at three marches below the *Daradax*, one might certainly have believed that Xenophon crossed the Euphrates at that *point*, and *not* at *Thapsacus* (meaning Dar): for at the end of the three marches, and near a town or village named *Alalis*, is the ordinary passage from Syria into Mesopotamia, opposite to the castle of Jiabar: and there the Euphrates is very *shallow*, according to Signior Balbi, who, from that circumstance, found great difficulty in navigating it. And hence it may certainly be inferred that there are fords in this quarter, in the season when the river is very low. This navigation of Balbi's was performed at the end of January or beginning of February: and it appears improbable that the river would fall much lower before the time of its beginning to swell periodically, in the month of April.

Leaving however the subject of *Thapsacus* (so far as Xenophon is concerned) to the determination of the reader, it may be remarked, that wheresoever he crossed the Euphrates, it does not affect the intermediate positions of the river *Chalus*, and the fountain of the *Daradax*.\*

\* It may, however, from the description of the course of his route, be concluded for

*Thapsacus* was a noted pass over the Euphrates, between *Palestine*, *Phœnicia*, and *Damascus*, on the one hand; and *Nineveh*, *Assyria* in general, *Media*, and *Eastern Armenia*, on the other; and perhaps might owe its importance to the circumstance of its being the lowest point at which the Euphrates was

certain, that Alexander crossed the Euphrates in this neighbourhood, in his way from *Tyre* to *Arbela*.

Both Pliny and Isodore of Charax, say, that Alexander founded the city of *Nicephorium*, which is universally supposed to have stood on the site of the present Racca; and which intermediately took the name of *Callinicum*.

Pliny says, (Lib. vi. c. 26.) that "the city of *Nicephorium* is situated near the Euphrates; and was founded by Alexander the Great, because of the advantages (or "commodiousness") of the situation." Here then is a reason given for its foundation: and it does not appear that Alexander ever founded a city in a place which he had not himself explored. And one can only account for his being *here*, when on his way from *Tyre* to *Arbela*. And that Pliny intended no other place than the one in question, is shown by his having previously (in Lib. v. c. 24.) connected *Nicephorium* with *Antbemusa*; which he describes as two cities of *Mesopotamia*. *Antbemusa* is recognised in a route given by Isidore, of *Charax*, between *Zeugma* and *Callinicum*; which latter, as we have shown, is the same with *Nicephorium*.

Arrian (Lib. iii.) says that Alexander "marched into *Mesopotamia*, having the Euphrates and the mountains of *Armenia* (i. e. *Mount Masius*, the southernmost ridge "of *Taurus*), on his left hand:" and it is known from the same history, that he forded the *Tigris*, at least 50 miles above Mosul. One can only understand, therefore, that he must have crossed the Euphrates at a point much higher up than *Thapsacus*: that he marched thence to the N. and N. E.: and finally, by *Ras-al-Ain*, and *Nisibis*; coasting the southern foot of *Masius*, to the before-mentioned ford of the *Tigris*; which may be taken for that passage described by Hajy Kalifa, at 23 hours travelling above Mosul; and at no great distance below the *Zaco Hills*; of which much more will be said in the sequel.

Hence the reader may perhaps believe, that there is some reason to suppose that Alexander crossed the Euphrates at a point far above *Dar* or *Thapsacus*.

It was indeed the opinion of more than one ancient author, that Alexander crossed at *Zeugma*; by which however, some may have intended the bridge opposite to *Hierapolis*: Pliny seems to have believed, that it was *Zeugma* of *Comagena*. But the quarter of Racca appears to the author a more likely place.

fordable. For the addition of so considerable a stream as the Khabour, must greatly increase its bulk and depth : and we hear of no ford below the *embouchure* of that river. Therefore Thapsacus was the most convenient pass for those who came from the south, and were compelled at any rate to cross the Syrian desert; but those who came from the westward, and whose route skirted the bank of the Euphrates, would doubtless avoid the desert, if they found a convenient passage into *Mesopotamia*, higher up.

Forster (in his Geographical Dissertation, at the end of Spelman's translation of the Anabasis, page 308,) says, that "*Thapsacus* is derived from *Thapsakh* ; signifying in the Hebrew, a *pass*, or *passing over*; or perhaps in that place, more properly, a *ford*." He also observes, that, "in I. Kings, ch. iv. v. 24, *Thapsakh* is rendered *Tiphseh*, and *Gaza*, *Azzah*." Pliny (Lib. v. c. 24.) says, that it afterwards took the name of *Amphipolis*. Its modern name, *Dar*, expresses in Turkish, much the same as is said of the Hebrew ; that is, a *passage*.

Xenophon makes no mention of any bridge, or any remains of one, at *Thapsacus*.\* The inhabitants reported to Cyrus, that the river had never been fordable before, at that place; or passable, but in boats; and these had been destroyed by Abrocomas, in his retreat. But it may be collected from the ancients, generally, that there was always a ford at Thapsacus,

\* Arrian says that Alexander found the *remains* of a bridge at *Thapsacus* : but as we have seen, it may be a question whether Alexander did really cross at *Thapsacus*? As there does not appear to be any authority for the existence of a bridge at that place at any time, the fact of Alexander's finding a broken bridge at the place where he crossed, ought to be presumptive evidence against his having crossed the *Euphrates* at *Thapsacus*. Xenophon leaves us to understand that it was usual to cross it in boats : and these Abrocomas had burnt, in order to impede the progress of Cyrus. (Lib. i. c. 22.)

at the season when the river was low. Xenophon estimates its breadth at 4 stadia, or nearly 700 yards: and by Balbi's account, it is spread out, over a very wide but shallow bed at Dar.

It will now be proper to say a word concerning the two streams, spoken of by Xenophon, between *Myriandrus* and *Thapsacus*.

The first of these was the *Chalus*, at 4 marches, or 20 parasangas from *Myriandrus*. This can be no other than the *Koik*, or river of Aleppo, which terminates in a small lake near the site of ancient *Chalcis*; since named Kinneserin. The nearest part of its course to *Myriandrus*, is 47 G. miles, in direct distance, which exceeds by 4 or 5 miles only, the given distance, whether taken in marches or in parasangas. But it is not of course to be supposed otherwise, than that the marches varied in length according to the nature of the roads, or to the facility of obtaining water and forage: it is the *mean* that is to be attended to.

It may be observed, that Xenophon speaks of no rivers between the sea coast, and the river *Chalus*; although he must of necessity have crossed one, if not three: as by the distance marched, he must have gone by the *upper* or shortest route, from Bylan towards the site of Aleppo. The lake of Antioch, with its contiguous marshes and bogs, did not then, in all probability, exist; but must have been formed since the date of ancient history. For one can hardly reconcile it to probability, that Strabo, (page 751,) should have described the plain of Antioch, or rather the plain situated below *Pagris*, (Begras) with the three rivers of *Labotas*, *Ænoporos*, and *Arceuthus*, besides the *Orontes*, as flowing through it, without

mentioning at the same time, had it existed, a lake of more than 10 miles in length, by 7 in breadth; which occupied the centre of the plain, and served as a receptacle to the three first of these rivers, whose waters it afterwards discharged by a single stream into the *Orontes*: for such is the state of things at this day. Ptolemy is equally silent.

It appears the most probable, therefore, that some obstruction formed in the bed of the *Orontes*, has caused this inundation, with its extensive marshes and bogs; which altogether occupy so large a proportion of the beautiful plain of Antioch. The upper road has only been rendered passable by its bridges and causeways, made by the Turkish government, in latter times: although one may conclude, that previous to the formation of the lake, the ground was solid and firm. Peter Texeira, in 1605, came this way, and describes the nature of the road. (Travels, Engl. Edit. p. 76.)\*

Here we regret that we cannot agree entirely with Forster, in his Remarks, (p. 307 and 308 of his Geog. Diss.) where he says that "Xenophon's silence concerning the Ifrin river, "that lay between Myriandrus and the Chalus, together

\* This plain is remarkable for containing within it, the fields of several battles, recorded in ancient history. Strabo, p. 751, mentions three; two of which were between the Romans and Parthians: the third between Ptolemy Philometer and Alexander Bala. To these may be added, that between Aurelian and Zenobia queen of Palmyra, which was fought on that side of the plain towards, and near the *Orontes*; and was called the battle of *Immæ*; perhaps from *Imk*, which is the present name of the district. Here also, in the opposite quarter, towards *Derbesak*, may be supposed to have been the grand camp of Darius, at *Socbus*: although one cannot readily conceive that the plain obtained the name of "*the field of Tribes*" from this circumstance (Hajy Kalifa's Syria). Its extent cannot be less than 30 miles in length by 20 in breadth: and the view of it from the pass of *Amanus*, is magnificent: according to Texeira.

“ with other circumstances in the history, seems to show “ that he wrote the *Anabasis* from recollection.” That he did write most of it from recollection, there can be no doubt; for how could he have written it on the spot? It is only to be supposed that he committed to writing, in the form of notes, the places and distances, together with such short *memoranda*, as would serve to recal the memory of particular transactions, but he does not profess to be a geographer, and to note every river or other object that presented itself in his way; but carries us to certain points or resting places, for the imagination, so as to keep up the chain of positions and distances: and occasionally, during a dearth of incident, gratifies his reader with short descriptions of places and things. He has omitted the lesser Zab, (the *Caprus*) a river of considerable bulk; together with other rivers of Kourdistan; each of them more considerable than the Ifrin. But the *greater Zab*, or *Zabatus*, is spoken of, because it is connected with important points in the history. Nor does he notice the pass of Bylan (or *Pictanus*, the lower strait of *Amanus*), through which he must of necessity have passed in his way into Syria; though he describes so particularly the maritime pass. The reason appears evident; the latter presented itself as an object of military speculation and enterprise; but the former as an indifferent object, as there was no enemy in the way; nor any difficulty to overcome.

The source of the *Daradax* is found to agree with the remarkable fountain and river of Fay; brought to notice by the party of gentlemen who visited Palmyra, from Aleppo, in 1691.\* The *Daradax* is given at 9 marches, or 50

\* Recorded in the Phil. Trans. of 1695.

parasangas from *Myriandrus*; 5 marches, 30 parasangas from the last station, at the *Chalus* river. The fountain of Fay is 92 G. miles *direct*, from *Myriandrus*; which is about 4 miles only, by the road, short of the 9 mean marches; but the *distance* given in the history, is out of all proportion too great; being a full day's march more than the ground allows.\*

The source of this fountain and rivulet is said to be at the distance of an hour's journey, or 3 or 4 miles from the Euphrates, into which it discharges itself: and in respect of Baulus, a place on the same river, it is taken to be about 12 or 13 miles to the N. W.-ward. Baulus is recognised as the *Barbalissus* of the Theodosian Tables and of Ptolemy; being in the former, 16 M. P. or nearly 12 G. miles from *Eraciha*; which is also 25 M. P. or 18 G. miles to the southward of *Hierapolis* or Bambouch. In Ptolemy, we have *Eragiza*, in much the same relative position; and the present town of Rajik, which is probably the *Eragiza* and *Eraciha* of those ancient documents, agrees in respect of Baulus, and of *Hierapolis*; and appears to be within 3 or 4 miles of Fay Fountain. It has moreover a small river falling into the Euphrates, near it. Hence it may be concluded, that the river of Rajik is the *Daradax* of Xenophon.

He couples with this fountain the palace and park of *Belesis*, a former governor of Syria; who appears to have shown a good taste in the choice of a situation. M. D'Anville refers this park to Baulus, at the Euphrates: and it is very possible that the ancient name of the town, *Barbalissus*, may have

\* Hence appears the use of recurring to the numbers of the marches, as a check to the distances given.

been derived from the Governor, as being the original founder or patron of the place. But Xenophon is silent respecting the Euphrates till he comes to Thapsacus; and the description of Fay Fountain is sufficiently pointed to be referred to the Daradax, independent of the distance: not to mention how seldom such an object occurs in this quarter.\* It appears that the Arab chief had his encampment along the borders of this stream, in 1691; which stream may be conceived to have been included in the park of the chief of ancient times. Cyrus, in destroying such an establishment, appears in the light of a wanton barbarian, rather than the polished prince represented by Xenophon.†

At Thapsacus Cyrus was detained five days; for now Abrocomas having retired to join the king of Persia, Cyrus could no longer pretend to seek him as an enemy, without confessing his intended hostility to the king. Accordingly this was avowed: and the Greeks, on the promise of a considerable reward on their entering Babylon, consented to accompany him. Cyrus had thus identified their interests with his own: and in the case of *failure*, had not committed himself with them.‡

\* Xenophon describes the stream to be a *pletbrum*, or 100 feet in breadth. This appears large for a stream supplied by a single fountain. The travellers give no description of it; only that it furnished a stream, along which the Arab encampment extended to a very great length. One might conclude that it was a plentiful stream.

† “Cyrus cut down the trees and burnt the palace.” (Anab. Lib. I. c. 21.)

One is sorry to be obliged to remark, that it was the practice of the *polished* Greeks themselves, to cut down the fruit trees when they invaded each other's provinces.

‡ That is, he had promised the reward only on condition of his obtaining the object of his wishes—the possession of his brother's capital city. Had the promise

No particulars are given concerning the *Araxes* river, the present *Khabour*, and the *Chaboras* of the Romans. Julian passed it just above its conflux with the Euphrates, over a bridge of boats : and we conceive it to be at all times too deep to be forded at this place. Julian may be supposed to have crossed it in April, Cyrus in August ; in both of which seasons it must have been low, but lowest in April.

It was at the angle formed by the meeting of these rivers, that Dioclesian afterwards built *Circesium*, as a *frontier* post towards Parthia ; and which was known by the name of Karkisia in later times. It is the *Carchamis* of the scripture. Here Cyrus halted three days to collect provisions, the country on the hither or northern side, being fertile, and affording plenty ; but a sterile desert beyond it. And hence the Geographers of Xenophon's time, included the fertile part of *Mesopotamia* in the division of SYRIA ; the desert part in that of ARABIA.

This desert extended the length of 18 marches of Cyrus ; and to the plains of *Babylonia*. It is now named from Sinjar, and is celebrated on occasion of an arch of the meridian being measured there, by order of the Caliph Almamoun, in the 9th century ; in order to ascertain the length of a degree, in Arabic miles.

Through the whole course of these 18 marches, the army of Cyrus kept the Euphrates on their right hand ; and it would appear, near enough to arrange their encampments, so as always to command water from it : for although the cattle died for want of *fodder*, there is no complaint of any want of related to the *country* of Babylon, merely, the Greeks would have had a claim on him previous to the battle of *Cunaxa*, which is not even hinted.

water. It is besides strongly implied that their track lay *near* the river. The first five marches were through the *level* part of the desert; "even as the sea, and full of worm-wood;"\* the latter 13 through a hilly tract, which, although only *implied*, in the history, is known to be such from modern travellers.† And indeed, the latter part, towards Hit, is exceedingly rough, and sometimes mountainous.

The distance given for the 18 marches, is obviously too great, and therefore must be abandoned: more especially as the ground appears to agree with the assigned number of *mean* marches. No less than 125 parasangas are given; which would require, for the mean march, no less than  $19\frac{1}{4}$  British miles *per day*; with a halt of only 3 days: and as 90 paras. are given for the last 13 marches, without any intermediate halt, through the *hilly* desert, which is a rate equal to that in the *level* desert; and moreover as it exceeds by several miles each day the rate through Syria and the plains of Babylonia, it cannot be maintained.‡ It must be

\* Ammianus speaks much in the same terms when he accompanied Julian.

† The passage alluded to, is where some persons "*ran down a steep bill.*" (Lib. I. c. 24.)

This hilly desert extends along *both sides* of the Euphrates, from the quarter of *Erzi*, to about 20 miles below Hit; a breadth of about 100 miles. It appears to be destitute of water, that of the Euphrates excepted.

‡ The ancients supposed the distance between *Tbapsacus* and *Babylon* to be 4800 stadia; implied to mean by the ordinary route along the Euphrates. As the information comes from Eratosthenes (Strabo, p. 77), it may be supposed that his knowledge was derived from the reports of the followers of Alexander, and not collected from the *Anabasis*. However, the measure of the route along the Euphrates, between *Tbapsacus* and *Babylon*, with allowance for inflexions (as above, page 10) gives no more than about 4230 stades, of 700 to a degree; the scale of Eratosthenes. The scale of Xenophon (750) would give about 4530. So that the 4800 is apparently

recollected, that we are tracing the steps of an army of 110,000 men, in a body; attended by a vast number of carriages and beasts of burthen. It is true that our knowledge of the particular windings of the Euphrates is too much confined, to enable us to *decide positively* on the length of the *road distance*, through this extensive line of march; but the general outline of its course, as well as the general distance, is supposed to be sufficiently known.

But if the distance marched, be calculated on the *number of marches*; allowing a reasonable length to each, according to the before-mentioned *Canon*; then the history and the actual geography, as known at present, will not disagree.\*

It is true also that the *Pylæ* of Xenophon, considered as the term of this line of march, now under discussion, has not been recognised in modern times; and that the position of the *Pylæ* can only be referred to the commencement of the

an error, either of the original system, or of copyists. Now the *Anabasis* has nearly 4900, between *Tbapsacus* (El Dar) and *Cunaxa*, alone; which is more than the *highest* calculation, reckoned *home* to *Babylon*; although that place was still several hundred stadia farther on. And this circumstance seems to prove the great excess of distance given in the *Anabasis*; or rather, it may be supposed, corrupted. Here it may be remarked, that in the same work, on many occasions, when a considerable number of marches are thrown together, the aggregate number of parasangas is greatly in excess.

But if the marches through the desert be taken at the reasonable standard of the *mean* march, the distance will be about 3840 to *Cunaxa*; or with the addition of the 500 of Plutarch, to *Babylon*, 4340; which is nearly a mean between the two scales of Xenophon and of Eratosthenes.

\* It may reasonably be supposed, that in order to avail themselves of the use of the river water, at each encampment, the *road distance* on the whole must be considerably increased: since the course of this river, as well as all others, must often have been devious from the *general line* of its course.

mountainous tract, from the plains of Babylonia, which first shuts up the passage along the bank of the Euphrates. Concerning this boundary, there is (as will be shewn in its place) very good *general* information; but this alone is not sufficient; and it will therefore be proper to extend the inquiry to some *known point*: for, extraordinary as it may appear, the *Zabatus*, or Greater Zab, is the first point in this march that can be *absolutely recognised*, in the geography, after passing the *Araxes*; although some intermediate points may be *clearly inferred* from circumstances.\* Therefore it becomes necessary, in the first place, to trace the position of *Sitace*, on the Tigris, *back* from the *Zabatus*, by means of Xenophon's marches; and afterwards to compare and arrange the marches between the *Araxes*, the *Pylæ*, the field of *Cunaxa*, and *Sitace*, respectively: as also the position of the canals of communication (and more especially the uppermost one), between the Euphrates and Tigris; which from natural causes, was probably much the same in the flourishing state of the Persian empire, under the dynasty of the *Achæmenidæ*, as in that of the *Abassides*; concerning which latter, we receive information from the oriental geographers.

If, therefore, most or all of these intervals are found to agree generally; it may be allowed to reckon the several positions as determined; at least so far as, from the nature of the *data*, could be expected. And, in effect, it can be no otherwise accomplished than by a careful examination of the particulars

\* As the *Pylæ* and the commencement of the plain of *Babylonia* constituted in effect *one point* in the Geography, a knowledge of the position of either may suffice; the place of commencement of the plain, being that of the termination of the mountains.

of the march from the *Araxes* to the *Zabatus*: attending to such circumstances and descriptions, as may afford the greatest aid towards a comparison of the ancient, with the modern Geography.

But having now conducted Cyrus to the entrance into the plains of *Babylonia*, through which the artificial canals of communication between the Euphrates and Tigris lead; and as the geographical positions of some of these canals, will be employed in checking certain points in the proposed inquiry into the route through *Babylonia*; it may be proper to digress from the main subject, in order to prepare the reader for a more particular reference to the canals; by putting him in possession of some curious facts, relating to their nature and arrangement; together with the general courses, levels, and periodical swellings of the two rivers, and the variations of their courses at different periods.

These observations (which are here given only in the abstract) arose in the course of an enquiry made for the purpose of correcting the geography of *Mesopotamia*; ancient as well as modern.

The two rivers Euphrates and Tigris, so famous both in ancient and modern history, are well known to derive their sources from the country of *Armenia*: the Euphrates from its northern parts; the Tigris from its southern: the *region of Taurus* separating generally the branches of the one, from those of the other. So that it may be truly said, that the Euphrates has its sources from the northern side of Taurus; the Tigris from the southern.\*

\* The place of the *eastern*, or remote source of the Euphrates, named *Murad* (the Euphrates of Xenophon) was not known until Mr. James Morier ascertained it, on his

Hence it happens that the length of course of the Euphrates is not far short of double that of the Tigris: although this latter contains by far the largest volume of water.\*

They issue from the Tauric region, at the distance of 200 miles from each other: and immediately begin to inclose the celebrated country of MESOPOTAMIA; now called Jezirah.† But their courses gradually approaching each other, they leave an isthmus of less than 20 miles in breadth, in the neighbourhood of Baghdad. Soon after they again diverge, to form the lower peninsula of Mesopotamia, or ancient Babylonia; and finally join their streams at Korna, about 120 miles from the Persian Gulf: thence forming one large trunk stream, under the name of *Shat al Arab*, or the river of the Arabs.‡

Great have been the changes in the courses of both these rivers, at different periods: and even within the reach of history. But as these changes do not appear to have taken place within the tract which contains the canals of communication between the two rivers, it will only be necessary to state, that in the time of Nearchus they kept distinct courses to the sea; and that enough appears to satisfy belief, that the Tigris once

way home from Persia, in 1809. The sources of the *northern* Euphrates, or Frat, are known from the Travels of M. Tournefort, and from the Arabian and Turkish Geographers.

\* The Tigris, besides the almost innumerable streams which form its principal head, in the valley of Diyarbekir, receives three very considerable rivers from Kourdistan; that is, the two Zabs and the Deällah. The greater Zab alone (the *Zabatus* of Xenophon), is reckoned equal to half the bulk of the Tigris.

† That is, the *island*; or, as applied here, the *peninsula*. The orientals employ the same term for both.

‡ The whole extent of this tract, from the foot of Taurus to the conflux, is about 680 British miles: and from *Taurus* to the *sea*, about 200.

held its course through the tract which afterwards formed the borders of *Susiana*.

It is in the approximating parts of the two rivers, in the quarter of Baghdad, that the artificial canals of communication are found: and indeed it appears probable that the rivers have, at some period beyond the reach of history, joined their main streams between the sites of *Babylon* and Baghdad; and that some of the canals in that quarter, are even made in the line of the hollow tract left by the Euphrates when it separated from the Tigris.\*

On their entry into the plains of Babylonia, the Euphrates runs on a higher level than the Tigris: for the waters of the former, are known to have at all times discharged themselves into the latter, in that quarter. But lower down, the Euphrates loses that superiority of level (descending into the tract anciently called the *Paludes*, below Babylon), and receives, in its turn, some copious branches from the Tigris.†

\* This requires some explanation. It is not meant that the hollow is confined merely to the dimensions of the river bed; but that the river by varying its course in that general direction, had left many hollows.

The same kind of approximation, and consequent divergence, may be observed of the Ganges and Megna rivers, in the quarter of Serampour.

† This is also shown by the greater distance to which the tide ascends in the Euphrates. In this latter river it is noticed at Ardsja; but in the Tigris, no higher than Uzzeer. The difference may be 80 miles by the course of the river.

Although some of the lakes of *Babylonia* are known to have been filled up in modern times, by the depositions made by the floods of the rivers; and converted into level plains, which still bear their former denomination of *Babr*, or lake; yet very considerable hollows still remain; and which are either marshes or lakes according to the seasons. They are named by the Arabs *Bataib*, which has been translated *Marsbes*.

As far as the progress of Alexander through this tract, can be traced in modern geography, the hollows which he traversed in his skiff appear to remain; although no doubt

The periodical swellings of these rivers differ in point of time; the Tigris appearing to be at its highest point about the middle of April;\* but the Euphrates late in June. This may be owing partly to the earlier melting of the snows, on the southern slope of Taurus; partly to the shorter distance which the water has to run.

The measure of swelling of the Tigris is well ascertained to be about 16 feet English.† That of the Euphrates is said to be less; but there is no good authority for the statement of it.

It may be seen by the Map No. III. that the canals are not carried by the shortest line, from one river to the other; but, on the contrary, in very oblique directions. Those of the Isa, and Nahr Malka, in particular, which are the best known, are one third longer than the distance between the two rivers. This is to be accounted for, first from the necessity of finding a declivity for the water to run on; and secondly, that as the Tigris is high, whilst the Euphrates is low, it was necessary to guard against mischief, from the reflux motion of the waters of the Tigris through them.

Although there are at least four canals of communication recorded in the flourishing times of the caliphate, yet at present (and for some centuries back) no more than one has remained open: and even *that* one, runs only during the floods

become shallower, by depositions; and one may form a tolerable guess concerning the place of his *Pallacopa*.

Arrian had heard of the superior level of the Euphrates, but erroneously applied it to its *whole* course. (Lib. vii.)

\* Mr. Eyles Irwin's Travels.

† The same.

of the Euphrates. That canal is the *Isa*; which emanates from the Euphrates at Feluja, and enters the Tigris at the head of Old Baghdad.\* From there being an ancient ruin of Assyrian fabric, (Aggar-Kuf†) near this canal, it may perhaps be inferred that a canal passed in this line, from very early times. The Nahr Malka too, another principal canal, whose bed is still traceable,‡ must have occupied much the same position in Macedonian and Roman times, as in those of the caliphate. And finally there appears an evident coincidence in general position, between the *upper* canal§ of Xenophon, and in that one whose outlet is noticed by Balbi, in 1579; and which was partly traced by Texeira in 1606.§

The alluvial ground between the two rivers, appears to extend upwards, 20 or 30 miles beyond the Isthmus, on the side towards the Euphrates; but much more on that towards the Tigris.

The Euphrates is said by M. Niebuhr to be 400 feet in breadth at the bridge of Hillah: and the Tigris, at that of Baghdad, 600. If Rhinland feet are intended, the former

\* The Old Baghdad here intended is the *first* Baghdad, which stood higher up the Tigris; but so near to the other, that the present city adjoins to the site of the old one. The old city stood chiefly on the *Mesopotamian* side; the modern on the *Median* side.

† Possibly the *Agrani* of the Ancients.

‡ Besides the authority of Sir Harford Jones, which is unquestionable, others have remarked a hollow space, which agrees in situation with the *Nahr Malka*.

§ The *outlet* seen by Signior Balbi, was at 8 hours of *slow* navigation *downwards*, short of Feluja, and for which  $14\frac{1}{4}$  G. miles in direct distance are allowed. And it being about  $33\frac{1}{4}$  below the point of commencement of the plains of Babylonia, it agrees with the  $15\frac{1}{2}$  parasangas of Xenophon, below the *Pylæ*. It was in the same position that Texeira traced the bed of a canal, which he represents as being in a great measure filled up.

would be about 411 British, the latter 617.\* There are other Reports; but we prefer the statement of M. Niebuhr, from his known accuracy.† At Hillah, which stands on a part of the site of the ancient Babylon, the stream of the Euphrates is *entire*, during the tranquil seasons; no part of it being diverted by lateral branches. Strabo says that the bridge of Babylon was a stadium in length; so that the *river* may perhaps be reckoned by his account much short of 500 feet in breadth; but even admitting 500, it cannot be believed that it supplied many navigable canals, at one and the same time: especially of the dimensions reported by Xenophon (Anab. Lib. I. c. 32.) of a *plethrum*, or 100 feet wide, and very deep: and of which there were said to be *four*, within the space of as many leagues! He says, indeed, that they were “*derived from the Tigris, and fell into the Euphrates* ;” which is contrary to every thing known on the subject; and might arise from his want of recollection when he put his book together. That *one* of them *communicated* with the Tigris appears likely; but why *four* of such dimensions, within a league of each other, from whichever of the two rivers they might have been derived? The account is improbable on the face of it. Possibly, one of them might have been the canal of communication between the two rivers: and the rest might serve the useful purpose of distributing water for agriculture, and for watering the date groves, which were said to abound there;‡ and the cause

\* The Rhinland or Leyden foot is said to be in general use amongst the northern nations of Europe. It is  $12\frac{1}{2}$  inches of British measure.

† Teixeira says that the Tigris is 500 feet in breadth, when very low; and he also reckoned the Euphrates at Masseib (near Hillah) 200 paces wide.

‡ Xenophon, Anab. Lib. ii. 10; and Ammianus Lib. xxiv.

why so many originated so nearly in the same place, might be, that it was the properest place in point of level for a common outlet; and that they afterwards diverged towards different quarters; affording at the same time a navigation as far as they went. But four canals of 100 feet wide each, and very deep; drawn from a river of less than 500 feet in breadth, and all within 9 miles, is doubtless a mistake.

Indeed it appears improbable that more than one large canal of communication, and that in a navigable state the whole year, should at any time have been kept up. Nor is there any rational mode of accounting for so many having been in existence at one and the same time (as the four recorded by Abulfeda), than that when a new capital city was founded at the Tigris, a new canal of communication might have been made, or an old one cleared out, to accommodate it; as the *Nahr Malka* for *Seleucia* and *Ctesiphon*; or the *Isa* for Baghdad. After which the old canal, by being neglected, would gradually fill up; so that water would be found in it, during the season of floods only. For experience shows, in other places, how much care is necessary, to keep canals open at all, for any great length of time; where nature herself does not favour the operation.\*

\* Since the above was written, the author has seen Mr. Rich's very interesting Memoir, on the Ruins of Ancient *Babylon*. He measured the breadth of the Euphrates at the bridge of Hillah, and found it to be 450 feet.

## CHAPTER V.

## FROM THE PYLÆ, TO SITACE.

---

*Discussion of the principal Positions between the Rivers Araxes and Zabatus (Khabour and Zab); with a view to determine the position of Sitace on the Tigris; and the intermediate places. Progress of Cyrus through Babylonia, to the field of battle at Cunaxa—Death of Cyrus—Marches of the Greeks to effect their escape—Truce and Treaty—Long and insidious detention of the Greeks by the Persians—Conducted at length across the Tigris at Sitace—Calculation of the distance between Cunaxa and Sitace—Site of Cunaxa, as deduced from the marches of Xenophon, and from the reports of its distance from Babylon—Canals crossed by the Greeks in Babylonia—Wall of Media—Sitace and its Bridge of pontoons.*

AFTER this long, but necessary digression, concerning the rivers and their canals, we proceed to trace the interval of distance (as stated above in page 73), from the *Zabatus* back to *Sitace*, on the one hand: and on the other, the interval between the *Araxes* and *Sitace*, through the *Pylæ* and *Cunaxa*.

The city of *Sitace* was 15 marches of the Greeks (accompanied by *Tissaphernes*,) short of the *Zabatus*: and for these

70 parasangas are allowed by Xenophon, (Lib. II. c. 18, *et seq.*)

In this instance the distance reported, falls short of the calculation, on the mean marches, by about 14 British miles by the road; and the latter is preferred, for reasons that will presently be set forth.

If 15 *mean* marches, equal to 159 G. miles in direct distance, be laid off from the place of conflux of the Zab with the Tigris, towards Baghdad and Modain, that distance will reach to a point about 11 such miles *below* Baghdad; whilst the 70 parasangas, equal to 150 G. miles, reach about 2 miles only beyond Baghdad. Thus the account by marches, and that by positive distance, differ only 9 G. miles, on the construction, on 15 marches; which is satisfactory in a matter of this kind: but as Xenophon reckons 4 marches of 4 paras. each, or 16 paras. between *Cænæ* and the *Zabatus*; whilst Senn, which answers to the former, is given, by more than one authority, at 36 Arabian miles, or 38 G. miles, *direct*, from the above conflux; the distance comes to 18 rather than 16 parasangas: so that it may be presumed that the distance on this line is generally under-rated, and therefore the account by the marches is preferred. Accordingly *Sitace*, by this arrangement, will fall at 11 G. miles below Baghdad; and nearly opposite to the *embouchure* of the Deälla river. It appears almost conclusive, that the Greeks did not cross the Tigris below it, because the Deälla being a deep river, passable only in boats or over a bridge, Xenophon would doubtless have mentioned it, under the circumstances in which they were then placed; as Ammianus does, who really crossed the Tigris below the junction.

In the next place, we shall enquire into the particulars of the march, between the *Pylæ* and *Sitace*; a more complicated matter than the last.

From a long and attentive examination of the subject of the canals, both ancient and modern, it appears to the author that there is reason to suppose, that the general courses of the *Euphrates* and *Tigris*, in that part of *Mesopotamia*, where they approach so near to each other, are much the same now, as in the times when they were the subject of ancient history. And hence, the ancient notices, as far as they go, may be applied to the present geography.\*

The authorities from whence we have derived our ideas respecting the line of boundary between the hilly or mountainous tract, and the level country of *Babylonia*, are here given in detail. And as, from the expression of Xenophon, it would clearly appear that, immediately after passing the *straits* or *Pylæ*, they entered the plains of *Babylonia*; it may be supposed that the straits were situated at the place where the mountains *terminate*, on the banks of the river; and that they are formed by the near approach of the base of the mountains to the river bank. However, no notices respecting a strait in that quarter

\* For the fact is that Strabo, (p. 80) allows 200 stadia for the breadth of the land between the two rivers; which is at present about 17 G. miles, or 20 British. It appears also that the space between *Seleucia*, at the *Tigris*, and the pass of the *Euphrates*, in the line towards *Hit*, was 9 *Schoenes*, or about 26 G. miles, *direct*, in the Itinerary of Isidore of *Charax*: and finally, that the *Tigris* still washes the remains of *Ctesipbon*; and that the *Euphrates* passes through the site of *Babylon*, as in ancient times: so that it may be justly inferred that no considerable change has taken place *in this quarter*, since the date of Roman times at least.

The site of *Seleucia* is recognised by the remains of *Ctesipbon*, which lay adjacent to it. The Arabian conquerors named the two cities, collectively, *Modain*, or the *two Cities*.

appear in any modern document: and it may still be a question, whether the place denominated the *Pylæ*, by Xenophon, may not refer to the shutting up of the river itself, between the mountains? For the mountains terminate at the same place on both sides of the river.\*

An English officer, Capt. Evers, who travelled from Baghdad to Aleppo, in 1779, remarks that he halted with the caravan, at the distance of 5 hours travelling to the eastward (or E.S.E.) of Hit; and at 5 miles to the northward of the Euphrates; in a valley surrounded by high mountains. And, as on his way he had ascended a hill on the morning of the same day, it may be concluded, knowing his rate of travelling, that the hilly tract extends at least 9 or 10 hours journey (caravan rate) below Hit: that is 20 G. miles in direct distance. And that it does not extend much farther, if at all, another of his remarks proves; for at 12 hours (24 or 25 G. miles) below Hit, he describes the country to be "a pleasant plain, agreeably interspersed with young *southernwood*, bushes, and wild-flowers." The journal of Texeira, (1694) fixes the termination of the plain and commencement of the "uneven, craggy stony country," somewhat farther from Hit; but more inland from the Euphrates; so as to correspond in point of distance with the former line of boundary, at the river side.

Signor Balbi, who sailed down the Euphrates in 1579, re-

\* The strait of *Nazerya*, described by Texeira, will, on no account, answer to the *Pylæ* of Xenophon, as M. D'Anville supposed. For its position is nearly 50 G. miles above the commencement of the *Babylonian* plains; whereas Cyrus entered those plains immediately after passing the *Pylæ*. Again, the canals commenced at 15 parasangas or 32 G. miles below the *Pylæ*; but *Nazerya* is 79 G. miles above the uppermost canal. M. D'Anville was not perhaps aware, how low down the hilly tract extended.

M. Larcher had an idea that a *city*, not a *strait*, is intended.

marks that the country *the day after* he left Hit was *mountainous*; but he gives no *positive* intimation concerning the distance: but by what can be collected from the proportion this part of the route bore to the remainder of his voyage to Feluja, it agrees generally with Evers's report.

The town of Hit, according to the geographical construction, falls at  $97\frac{1}{2}$  G. miles from Baghdad: and the site of *Sitace*, at 11 G. miles below Baghdad,\* by the same construction, is 107 from Hit: so that the place of the *Pylæ* being 20 below Hit, 87 will, of course, remain for the distance between the *Pylæ* and *Sitace*.

Thus the positions of *Sitace* and the *Pylæ* are approximated: and it will now be proper to trace the route of Cyrus, from the river *Araxes* (the Khabour) to *Sitace*; through the *Pylæ*; in the course of which, will arise the positions of the canals of communication, which form a slight check to the other positions; and also the place of the field of *Cunaxa*.

The History gives us to understand (as we have before remarked) that the route of Cyrus between the *Araxes* and *Pylæ*, lay along the general course of the Euphrates; and it may be collected, that he kept near enough to it to arrange his encampments, with a view to avail himself of the use of its waters; as no complaint of want of water appears. Consequently, in order to measure his line of route, it should be traced, so as to skirt the *general* course of the river, in the mode that the route may be supposed to have done. And in this way nearly 200 G. miles are measured, between the aforesaid points; and which, reduced to road distance, may give a mean of nearly  $14\frac{1}{2}$  British miles; or somewhat above the standard of the

\* See above, page 82.

mean march, on the 18 marches: but for which, upwards of 19 miles are given in the history. (See above, page 71.)

It is certain that we are told by Xenophon, (Lib. I. c. 24.) that "some of these marches were very long, when Cyrus "had a mind that his army should go on till they came to "water or forage." And this refers particularly to the *hilly* desert, between *Corsote* and the *Pylæ*; in which it appears that they were incommoded and delayed, by the badness of the roads: so that the marches might have been lengthened, both in time and in distance, *by the road*, without adding to the *direct* progress; which alone can be shown by the geography. At all events, the ground between the *Araxes* and the supposed place of the *Pylæ*, will not admit of a greater distance than is produced by 18 *mean* marches. It may also be remarked, that the tract towards Hit, is represented by modern travellers to be exceedingly rugged and mountainous.\*

From the *Pylæ*, (Lib. I. c. 30.) Cyrus marched in 3 days 12 parasangas "through the country of *Babylon*," and then

\* Since the construction of the general geography, the author has seen M. Olivier's 5th volume. According to his journal, the distance between Annah and Hit, along the Mesopotamian side, would be increased 10 G. miles: but as Mr. Beawes gives the direct distance between them, on the Arabian side, at three journies, one cannot suppose that they are *farther asunder in direct distance*, than the construction gives. The Euphrates, by its winding in a greater degree than we expected, in that part, may produce the distance set forth by M. Olivier; or the road may be unusually rough.

The shortest trace of the road along the eastern bank, on the construction, between Annah and Hit, is 59 G. miles, and M. Olivier's time may be taken at 36 hours. His rate was *very slow*, with the caravan; and even with the above addition, his daily progress, in direct distance, would be little more than 15 miles *per day*. The 36 hours might be allowed to produce in this rough country 68 or 69 G. miles, *direct*.

It cannot, however, be collected from M. Olivier's journal, where the plain (of *Babylonia*) ends, and the hilly tract commences; with any degree of exactness.

reviewed his forces in the *plain* at midnight; expecting the King to give him battle the next morning; but no enemy appearing, he marched the 4th day, "in order of battle," 3 parasangas: and in the course of this march, he first passed an unfinished trench or canal, (made, according to Xenophon, by way of fortification,) and afterwards came to the *Canals of Communication* between the Euphrates and Tigris, over which there were permanent bridges.\*

On the next day, (the 5th from the *Pylæ*) Cyrus, thinking that his brother would not meet him at the head of his army, as he had allowed him to pass the trench, &c. unmolested, "marched with less circumspection," and the day following, (the 6th, that is the day on which the battle was fought,) no kind of order was observed on the march, until the enemy's army was discovered at a distance; Cyrus riding on his car, and many of his soldiers' arms being deposited in the waggons. The distance of the camp, the day before the battle, from the field itself, is known by Ariæus's return to it, the night after the battle, to be 4 parasangas: and indeed the march was nearly completed when the enemy appeared. (Lib. I. c. 34.) But the length of the march on the preceding day (the 5th from the *Pylæ*), can only be guessed; but may probably be

\* It has been already remarked, (page 79,) that these canals were said by Xenophon (Lib. I. c. 32), to be "derived from the Tigris, and fall into the Euphrates." This however appears to be a mistake; unless he meant that canals originally derived from the Tigris, first fell into a canal, or branch, derived from the Euphrates; and afterwards, collectively, joined the Tigris: because all the canals of communication, above *Seleucia* and *Ctesiphon*, certainly ran from the Euphrates into the Tigris; as at present. Moreover, Xenophon was there at a time when *both* of the rivers were low; and the bed of the Tigris, at and above *Seleucia*, is lower than that of the Euphrates; although the contrary takes place lower down. (See the Map No. III. for the canals, &c.)

nearly the same as the succeeding one: for as that was of 4 parasangas, when marching *without* order, the other may be supposed to be somewhat less, because they appear to have preserved some kind of order. But if taken at 4, like the other, 23 parasangas may be taken for the distance of the field of battle from the *Pylæ*; or in direct distance  $49\frac{1}{4}$  G. miles.\*

It appears that the Greeks, the day after the battle, (in which Cyrus was slain; and their object, of course, changed, from that of establishing a new king of Persia, to that of providing for their own safety, against the attacks of the king whom they meant to dethrone;) marched to join Ariæus, who had commanded the native troops belonging to Cyrus.† They found him at the place of their encampment, on the day before the battle, situated, according to the former statement, at 19 parasangas below the *Pylæ*.‡

From this place, the route of the Greeks, with Ariæus, may be traced as follows: on the first morning they set off with the sun on their *right* hand; and it being about the time of the equinox, their course must have been northerly, or probably somewhat to the east of north, from what will presently appear. They continued marching a great part of the day, but doubtless in order of battle, as they might expect that a

\* Hence the field of *Cunaxa* should have been near Feluja. (See again the Map No. III.)

† The author has purposely omitted in this place his remarks on the battle, and on the subsequent conduct of the Greeks; that he might not break the thread of the Geographical Discussion. The Remarks will be found in the succeeding chapter.

‡ That is, 4 parasangas *above* the field of battle, which was 23 below the *Pylæ*: Ariæus having, at the close of the day of battle, marched back to the place of encampment, on the preceding day. (Lib. II. c. 1.)

part of the King's troops was near them : and moreover, they had unquestionably some of the deep canals which they had crossed in the march, over permanent bridges, to *recross* in the best manner they could.\*

Their present object was to endeavour to get the start of the Persian army, by making their first two or three marches as long as possible ; that with a large army, the king might not be able to overtake them ; and they concluded that with a small one, he would not venture to pursue them.† They appear, however, to have deceived themselves, as a part of the king's army, doubtless the cavalry, was found quartered in their neighbourhood on the same evening. (Lib. II. c. 7.)

It had been the advice of Ariæus, not to attempt to return by the way they came ; in which no provisions could be procured (in effect the Mesopotamian and Arabian deserts) ; but by another route more circuitous, but where they would be in no want : and the course they were taking, shows that Ariæus (if he was sincere at that time, and he had not then been tampered with,) meant that they should cross *Mesopotamia*, in a north-easterly direction, and probably pass the Tigris about Samarra ; which they might have reached in 4 or 5 forced marches ; and thus have disentangled themselves from the desert of Sinjar. But even then, they would have been much in the same situation (the loss of their general excepted) as they afterwards found themselves at the *Zabatus*.

The following morning, however, they acceded to a truce,

\* See again the Map, No. III.

† “ This scheme for the march of the army, was calculated only to effect their escape from the power of the king ; BUT FORTUNE PROVED A MORE GLORIOUS CONDUCTOR ! ” (Lib. II. c. 7.)

and were conducted to some of the Babylonian villages, to be quartered and supplied with provisions.

Let it now be supposed, that the first march from the camp which they had occupied the day before the battle, and to which they returned after it, was 6 parasangas, north somewhat east: and the second to the provision villages, a very short one; perhaps only 2 parasangas: because there was no want of villages in that quarter, as may be collected from the transactions on the preceding evening; as well as from the speech of Clearchus to the king's messengers, who were sent to treat concerning a truce, early that morning. For that speech expressing a *demand* for an *immediate* supply of provisions, it appears to have been almost immediately complied with; by conducting the Greeks to villages, in which they found plenty of corn, dates, and palm wine.\*

In and about these villages they were detained 26 days, and they then marched in company with Tissaphernes and Ariæus, towards *Sitace* and the Tigris; the king having insidiously consented to escort them towards Ionia; not that the Greeks *in general* were unsuspicious of some intended treachery, but their situation was such as compelled them to acquiesce for the present. Even the delay at the villages must have convinced them that it was to gain time, in order to collect troops to attack them on the march. But for this the Greeks had no remedy.

At the end of the 3d march from the villages, they came to the *wall of Media*, built of burnt bricks, laid in bitumen, and said to be 20 feet thick, and 100 in height. (Doubtless a

\* Ammianus describes this tract as a kind of forest of palms: and these always imply population.

corruption in the numbers.) During the two succeeding marches, they are said to have made 4 parasangas each day, which brought them to *Sitace*; situated at half a parasanga from the [western bank of the] Tigris. Let 4 parasangas also be allowed for each of the 3 marches, from the villages to the wall (the length of which is omitted); and then the account of the march, from the camp before the battle, will stand thus:

To the camp in which the truce was con-		
cluded, north, a little easterly	- - -	6 Parasangas.
Thence to the provision villages, south-		
easterly	- - - - -	2*
To the wall of Media, S. E.-ly	-	12
To <i>Sitace</i> , S. E.-ly, or E. S. E.	- -	8
		<hr/>
	Total	28
		<hr/>

These courses and distances, constructed geometrically, produce  $20\frac{1}{2}$  parasangas for the distance of the camp, the day before the battle, from *Sitace*; or reduced to direct distance,  $44\frac{1}{4}$  geographical miles. And this camp being 19 parasangas (see page 88); equal to  $40\frac{3}{4}$  G. miles from the *Pylæ*; the aggregate gives 85 G. miles between the *Pylæ* and *Sitace*: and 87 is the result deduced from Hit. (See above page 85.)

This agreement between the two results, for so trifling a difference is not to be regarded, is merely the effect of accident; and, admitting the whole geographical system to be right,

\* Neither the length nor direction of this march is given. Concerning the supposed length, we have spoken before: the direction was probably towards the passage of the Tigris at *Sitace*; to which they were afterwards conducted; and which was probably designed, from the moment of concluding the truce.

(as we trust it is, so far as the *data* on which it is founded, will admit;) may be regarded as decisive of the positions of the *Pylæ*; of *Sitace*; the field of battle; and the outlets of the canals of communication.

To those who may slight the above checks, and who may object to the distribution of the space, altogether, between the *Araxes* and the *Zabatus*; on the ground that the position of *Sitace* is merely *assumed*: no other answer can be given, than that there is much *presumptive* proof, in the general statement of the distance, and number of marches, given from *Sitace* to the *Zabatus*; as well as in the harmony that prevails between the intervals generally. Such is the agreement of the respective intervals of distance, between the *Araxes* and the commencement of the plains of *Babylonia*; as also between the latter and the outlet of the uppermost canal of communication; and between that canal and *Cunaxa*, according to the position given to it by Plutarch, and implied from Xenophon; (the details of which will presently be given;) and finally, between *Cunaxa* and *Sitace*. Moreover, it has been remarked, that the uppermost canal seen by Balbi in 1579, corresponds generally with that seen by Xenophon: and the position of the field of *Cunaxa*, reckoned *downwards*, either from that canal or from the *Pylæ*; or *upwards*, from the site of *Sitace*; agrees nearly with Plutarch's report of its distance from Babylon. To all which may be added, that the *number of marches*, taken at the mean rate, under the circumstances of each respective case; or, in other words, the distance on the route, as it may be understood from the history, agrees generally with the space arising on the geographical construction, throughout the whole space between the *Araxes* and the *Zabatus*.

Concerning the position of the field of battle of *Cunaxa*, Xenophon is made to say in the copies of the *Anabasis*, generally, that it was 3060 stadia from Babylon. (Lib. II. c. 5.) but M. Larcher finds 360 in a copy in the late king of France's library: and also in the Eton MS. Plutarch, in the life of Artaxerxes, says 500: and he also adds the name of the place, *Cunaxa*: both, perhaps, from Ctesias.\*

The 3060 stadia can be nothing but a corruption; the other numbers may be regarded as approximations: and if Plutarch's information comes from the Persian quarter, it is likely to be the nearest to the truth. According to these reports, combined with the result of the enquiry in page 88, which gave 23 parasangas, or  $49\frac{1}{4}$  G. miles below the *Pylæ*, the field of *Cunaxa* should have been at a few miles below Feluja, the present *port* of Baghdad, on the Euphrates, and at about 30 G. miles to the westward of that city. In respect of ancient Babylon, the *site* in question, is about 45 G. miles, in direct distance; whilst the 500 stadia of Plutarch, if taken at the standard of Strabo's scale of 700 to a degree, would give 43 such miles; and if at that of the Grecian Itinerary stade, in the geography of Herodotus, which is 718, nearly 42. The 360 of Xenophon, at his own standard, give 30 only. When it is considered that the Greeks made 5 marches, although of no great length, between the villages in which they had been so long quartered, to *Sitace*, and that they only reached the Median wall, in the first three of these marches, it is difficult to conceive any geographical arrangement that will suit a nearer position, in respect of Babylon, than 500 stades, or upwards, for the site of the field of battle.†

\* See the note, page 72.

† There was said to be a hill or eminence at the place of battle; (Lib. I, at the end,)

We shall conclude this head of enquiry, with some observations on the positions of the canals that were traversed by the Greeks, and on the wall of *Media*.

The great trench dug by order of the king of Persia, with a view to impede the motions of Cyrus, but which, by not being continued to the Euphrates, left a passage for his army;\* occurred in the 4th march from the *Pylæ*; or from 12 to 15 parasangas from the commencement of the Babylonian plains. The great canals of communication, between the Euphrates and Tigris, seem to have immediately succeeded to this trench: for Xenophon says "in this plain are the canals;" &c.†; 4 in number, at the distance of a parasanga from each other; that is, they occupied 3 parasangas of space in the line of march. Hence one of them at least may be supposed to have occurred in that day's march: and was therefore *short* of 15 parasangas from the *Pylæ*. For the trench was said to be met with, in the *middle* of the march; by which may probably be understood, about half way onwards, on that day's march; or 13 to 14 parasangas from the *Pylæ*. And the canals must of course have been lower down.

It appears from the geographical construction, that Balbi's which, in a country almost entirely flat, should lead to the discovery of the situation. However it might be nothing more than a mound *thrown up*. Texeira saw, at the distance of about 30 G. miles to the westward of Baghdad, "a ridge, lying on his left (i. e. southward), about three leagues distant, on which there appeared two high minarets; and at the foot of it, on the further side, next the bank of the Euphrates, there was an Arab town." Xenophon speaks of a village at the foot of the eminence, perhaps *Cunaxa* itself: and by the transactions, very near the Euphrates. The field of battle should have been about the same distance from the site of Baghdad, as the above ridge.

\* But if completed, of what use could it have been, without a proper force to defend it?

† Lib. I. c. 32.

uppermost canal was about  $33\frac{1}{2}$  G. miles below the commencement of the plains; or about  $15\frac{1}{2}$  parasangas (of Xenophon's scale): so that it may be supposed to occupy the place of one of Xenophon's canals; and perhaps that of the uppermost one. Nor is it unreasonable to suppose, that *about* this position, a canal, or the remains of one, may have existed, ever since the time that the ground was first opened for that purpose: either that the level, or the soil in that particular line, was naturally the most favourable for the purpose of making a canal of communication, between the two rivers; and which operation may have been repeated, in whole, or in part, as often as became necessary: or that the opening being once made, with a direction and level favourable to its permanency, it had lasted beyond the usual term of such works.\*

In their way to the *provision* villages, on the short march of the second day, they crossed canals, over which it was necessary to make temporary bridges. Whether these were canals drawn from the larger ones, for the purpose of irrigation, such as Xenophon saw near *Sitace*; whether they were the same which they had crossed in their way *downwards*, and must have *re-crossed* in their march northward; or lastly, whether they were not drawn immediately from a branch of the Tigris, for the purpose of irrigation, cannot be known.

No canals are mentioned, between the provision villages and the *Median Wall*, in the course of three marches; although it appears almost certain, that such must have occurred. Between the *wall* and *Sitace*, two are spoken of, as being drawn

\* Or it might have occupied a part of the ancient bed of the Euphrates. Although the level rises by degrees, by the depositions of floods, the surface may preserve its form; and the beds of ancient rivers or canals remain for an incredible length of time.

from the Tigris; apparently for the purpose of irrigation, only: besides a third, at Sitace itself. See again the Map, No. III.

The *wall* of *Media* appears to have stretched across the narrow isthmus, between the *Tigris* and *Euphrates*; terminating on the former, a little above the *site* of Baghdad; and on the latter, not far above the *outlet* of the *Nahr-Malka* canal: for Julian came to the termination of it, at a place named *Macepracta*; and soon after came to the head of the canal. The Greeks passed through it, at 8 parasangas short of *Sitace*: so that, combining these notices together, one may conclude that it was drawn across the isthmus between the two rivers: extending in length about 24 British miles: and its use, to cover the *lower* and most fruitful part of *Mesopotamia*, together with the principal cities within it, from the attacks of the *Medes*, or the *Assyrians* of *Nineveh*. It was therefore constructed with the same view as the wall of *Corinth*; the *Hexamilia* of the *Thracian Chersonesus*; or the wall of *Severus*, in Britain: all of which were placed at the narrowest part, between the surrounding seas.\*

\* This wall is named by Strabo (page 80), from Semiramis, who perhaps had the reputation of building it. He extends it across the narrowest part of the land between the two rivers; where he says, it is somewhat more than 200 stadia across. (See above, note page 83.) So far we agree in opinion with him: but he supposed that *Opis* stood at the place where the wall touched the bank of the Tigris. This, however, is irreconcilable with the distances given by Xenophon. The Greeks passed through the gate of the wall, at 8 parasangas short of *Sitace*; and *Opis* was 20 parasangas higher up than *Sitace*; whilst the *whole* breadth of the isthmus, which determined the *length* of the wall, was no more than about 8 parasangas!

Moreover, *Sitace*, according to Strabo's position of the upper end of the wall, would have fallen 17 or 18 miles below the *site* of *Seleucia*; which is highly improbable.

Many difficulties, however, occur, in reconciling the different notices, respecting the positions of different portions of this wall: amongst others, Xenophon says that it was "20 parasangas in length, and was not far from Babylon."\* And when at the *trench*, made by order of the king, he says,† that "it extended 12 parasangas upwards, traversing the plain as far as the the wall of Media."‡ According to our idea, the trench could not be less than 18 or 20 parasangas from the wall; and Babylon 15.

The canal which joined the Tigris immediately below *Sitace*; and which from its depth, as well as its forming the tract in which this city stood, into an island; was probably drawn from the Euphrates. In position it agrees to the place of the *Sarsar* canal, of the time of the Caliphs: which was the *shortest* of all the canals of communication between the two rivers.

*Sitace* itself was "a large and populous city" in *Babylonia*, at 15 stadia from the Tigris; and was probably next in rank to *Babylon*. By its having a permanent bridge (of boats) it may be supposed to have been the principal pass over the Tigris, between Babylon, Media and Armenia. And as Strabo says (page 744), that *Sitace* lay in the *way* from *Babylon* to *Susa*, it may have served for *Susa* also; for in that sense only, it could be said to be situated in the road to *Susa*.§

The wall was in a ruinous state when seen by Ammianus; but that was more than seven centuries and a half after the time of Xenophon: and it had probably ceased to be of use, even before his time, by the union of *Assyria* and *Media*, with *Babylonia*.

\* Anab. Lib. II. c. 15.

† Lib. I. c. 32.

‡ Diodorus says much the same: i. e. 400 stadia; 12 parasangas of Xenophon being 360.

§ Possibly the *country* of *Sittacene*, not the city itself, was intended; and this may have extended far to the south-east of the *city* of *Sitace*.

At present there is no bridge over the Tigris below Mosul save the one at Baghdad; which has been supposed to stand at about 11 miles higher up than the site of *Sitace*; and may indeed be considered as its representative. M. D'Anville supposed that the ruins of Aggarkuf, at 9 or 10 miles to the westward of Baghdad, were the remains of *Sitace*. Aggarkuf is doubtless of Assyrian origin, by the nature of the building;\* and M. D'Anville understood that the Tigris once flowed past it.

Xenophon relates that the bridge of *Sitace* was supported by 37 *pontoons*. That of Baghdad had, when Balbi saw it in 1579, exactly the same number; Thevenot says 40, in 1664; and Mr. Ives counted 39, in 1758: and again M. Niebuhr, 34, in 1766. One might have concluded, from these examples, which furnish a mean number that agrees with Xenophon, that experience had in all ages pointed out this plan as the best. But on the other hand, Texeira, an observant man, says 28 only, in 1605; and Della Valle 29, in 1616; and he adds, that more were added as the river increased: but it may be perceived that these two accounts differ from all the rest.

\* See Mr. Ives's description of it, in his Journal.

## CHAPTER VI.

OBSERVATIONS ON THE FOREGOING MARCH, FROM MYRIANDRUS TO SITACE; ON THE BATTLE OF CUNAXA; AND ON THE SUBSEQUENT STATE OF THE GRECIAN ARMY.

---

*Geographical Arrangement of MESOPOTAMIA, in the time of Xenophon—Desert of Mesopotamia, or Sinjar—Corsote, probably Erzi or Irsah—Mode of supplying Armies in the east, by Travelling Markets; in use at that time, as at present—the Carmande of Xenophon, probably Hit—Quarrel between the Soldiers of Clearchus and Menon—Treason of Orontas—Grand Review of Cyrus's whole Army, three days before the battle of Cunaxa—that battle lost by the error or self-will of Clearchus—General Ability and Conduct of the Grecian Commanders, after the Death of Cyrus—Flourishing State of the country of Babylonia—Palm Groves—Wine and Honey of the Palm Trees.*

IN the course of the two last Chapters, the route of the Greeks has been traced geographically, through *Mesopotamia* to *Sitace*; with a view of comparing the historical detail of the marches, with the ground actually marched over. And before we accompany them across the Tigris, the indulgence

of the reader is solicited, whilst certain particulars that occurred during the march, are considered : and which were omitted in place, in order that the course of the geographical discussion might not be interrupted.

When Xenophon entered *Mesopotamia*, he called that part of it, which lay to the northward of the *Araxes* (Khabour), SYRIA; that between the *Araxes* and the *Pylæ*, ARABIA; and the tract between the *Pylæ* and the river Tigris, BABYLONIA. So that according to him, Syria comprised the *fertile* tract, on both sides of the Euphrates; as in like manner, Arabia comprised the *desert* part, on both sides of it, as far as Babylonia; the river Araxes forming the boundary between them. The name *Mesopotamia* does not appear to have been applied to the tract between the two rivers, till after the Macedonian conquest.

Pliny (Lib. v. c. 24.) includes *Singara* (Sinjar) in Arabia; whence it would appear, that the name was extended the whole way across Mesopotamia, to the Tigris; the desert of Sinjar constituting a part of Arabia. In effect, Syria expressed the *fertile* part; Arabia the *desert* part.

Beyond the Khabour, (*Araxes*) southward, this desert, to the extent of five marches along the Euphrates, is described as being a perfect level, without trees and often covered with *Absynthium*.\* Dr. Rauwolf, who only viewed this part of the

\* Ammianus Marcellinus, who crossed the eastern part of the same desert, with the remains of Julian's army, on its return, makes nearly the same remark. It may therefore be concluded, that the whole tract in that part is nearly of the same description, from river to river. The wild asses remarked by Xenophon for their swiftness, bear much the same character at present. Texeira, in 1606, saw herds of them in the Arabian desert, immediately *opposite* to the desert of Mesopotamia, where Xenophon saw them.

desert from the vessel, as he sailed along, says that it was absolutely bare. He went too during a more temperate season than Xenophon; for the march of Cyrus from the sea-coast to Babylonia, was made at the hottest and driest season of the year. Balbi is silent on this head.

A river named *Masca* by Xenophon, 100 feet in breadth, with the city of *Corsote*, occurred at the end of the level desert, five marches from the *Araxes*. In the first place it may be remarked, that the *level desert* does really terminate (at the side of the Euphrates) at the distance of about five marches from the Khabour river; when the *hilly desert* begins, and continues to the distance of 20 miles below Hit. For although all our modern travellers, (without exception) have kept to the Arabian side of the Euphrates, from the parallel of Aleppo, downwards to Annah, yet their view of the country has proved the above facts, respecting the inequality of its surface, below Erzi; (which may be taken for the site of *Corsote*).

Concerning the river of *Masca* and city of *Corsote*, therefore, nothing is known in these times: for even if the river still ran in its former course, the passengers who descended the Euphrates in boats, might easily miss the *embouchure* of a narrow stream.

Ptolemy has a river in *Mesopotamia*, named *Saocoras*, which in position, answers to the *Masca* of Xenophon, in the lower part of its course: and which is, in reality, a continuation of the river of *Nisibis*, which other geographers have called *Hermas*. Now the *Hermas* no longer runs towards the site of *Corsote*, but falls into the Khabour (the *Araxes* of Xenophon), between Sinjar and Karkisia. Whilst it ran towards *Corsote*, its general course was parallel to that of the *Araxes*; the mountains of Sinjar separating them.

There seems therefore to be little doubt that the *Hermas*, under the name of *Saocoras*, anciently gained the Euphrates, by a separate channel: and also, that it was the Masca of Xenophon.\*

A branch of the *Hermas* ran by *Hutra*, in the desert of Sinjar; and thence to the Tigris, near Tikrit. And this branch or canal existed, down to modern times, as we learn from the oriental geographers: but is now quite dry. As the line of this branch was nearly 130 British miles in length, one may conclude that it was an ancient course of the whole river; and that it gradually deserted its bed; first taking a new course towards *Corso*, and finally running into the Khabour. The extreme flatness of this region, would give occasion to such changes; especially when aided by the matter of alluvion brought down by the *Hermas*, from the quarter of *Nisibis*.†

A place of the name of *Zagora* occurs in the Theodosian

\* Trajan is said to have built his fleet out of the timber of the forests of *Nisibis*: in which fleet he afterwards descended the Euphrates and passed into the Tigris at *Clesi-pbon*, by the canal of *Nabr Malka* (the King's river). Now one can only suppose that he carried this fleet to the Euphrates by the *Hermas*; but whether by a separate channel, or by the collective waters of the *Hermas* and *Khaboras*, cannot now be known.

No one can reasonably doubt the fact of Trajan's voyage down the Euphrates, when Ammianus reports that he saw the mound from whence Trajan had harangued his army, near the place of the bitumen fountains: i. e. *Hit*; and also that he is known to have passed into the Tigris through the *Nahr Malka*.

† The river *Hermas* (now called *Al-Huali*, but known to the oriental geographers under its ancient name also) is formed of a very great number of streams from the southern slope of mount *Masius* (now *Karadjy-dag*), and waters the territory named by the Macedonians *Mygdonia*; of which *Nisibis* was the capital. (See the note, above.) The *Hermas* and its branches appear to have occasioned great inundations in the plains of *Nisibis*; (Julian Orat. I.) and from its being subject to such floods, it necessarily results that it must carry with it the matter of alluvion.

Tables near *Singara*. It is possible that the river *Saocoras* may have taken its name from it.

Of *Corsote*, Xenophon says that it was "a large city, *uninhabited*: the river (*Masca* is implied,) *ran quite round it*. In "this place they staid 3 days, and made their provisions." It is to be understood that Cyrus all along kept to the left bank of the Euphrates; but whether *Corsote* stood so near the latter river, as that *both rivers* helped to surround it, cannot be known. By the expression "*quite round it*," it ought, of course, to have been situated in an island.\*

We have been thus particular in stating this matter, because the ruins of a very large city, now named by the people of the desert, Erzi, or Irsah, occur at no great distance from the assumed position of *Corsote*. Signor Balbi and Dr. Rauwolf both speak of it, in their voyaging down the Euphrates; this river forming a very remarkable peninsula, in which these very extensive ruins were contained.†

\* It was said to be an uninhabited city, and also in the desert. Yet the Greeks staid there 3 days to make their provisions. Perhaps it was deserted only in consequence of the approach of Cyrus's army: a very common practice in the east, even on the approach of their national army. (See Lib. I. c. 24.)

† By the manner in which Signor Balbi speaks of the remains of El Erzi, it must needs have been a very large city.

He says that its remains are situated on the north side of the river, on a hill of no considerable height, and with a level summit. In his idea, it was much larger than Cairo in Egypt. Its ruins presented to the view nothing but portions of massy walls, and lofty towers. Although aided by the current of the river, and the oars of his vessel, they employed the whole time between morning and noon, in passing it.

This appears extravagant, until it is explained by the remarks of Dr. Rauwolf, who also went the same route. It appears that the river, in this place, forms a peninsula which required *more than half a day* to encompass: so that in fact, Balbi and he made nearly the tour of the whole site of the city. But still it must have been a very large city. Rauwolf was there in 1574; Balbi in 1579.

It may be observed, that the general position of Erzi is very remarkable. For it is situated precisely at the great southern bend of the Euphrates, where it touches on the great desert route, between Syria and the head of the Persian gulf: and in which general position, on the Arabian side, Ptolemy's city of *Agamana* appears to have stood. There are still to be seen on that side also, a tower, and many other ruins. The tower is named *Kahim* or *Gwiam*: one part of the ruins *Manea*, and others *Anga*: as if *Agamana* had consisted of *two names*, belonging to two adjoining towns: of which many instances occur in the east.

Besides these ruins, Signor Balbi passed those of several other cities and towns, on the banks of the Euphrates, between Erzi and Hit; but more particularly between the former and Annah. The edifices themselves were probably those of Mahomedan times, though perhaps raised on more ancient foundations; and they unequivocally prove the existence of a very different state of things, at some former period; when the commerce between the Persian Gulf and the Mediterranean, which formed a principal link of the great chain between India and Europe, was in activity. For those cities which lay equally in the track of the land caravans and of the navigation by the Euphrates, were probably supported by that commerce.

But at the date of the expedition of Cyrus, it is almost certain that no such commerce existed, as would afford support to so many towns, situated in an arid desert. We learn from Herodotus, that India was little known to the Persians, before the date of the expeditions of Darius Hystaspes, which were made about a century before the present expedition: and it

ought to be no matter of surprise, that Xenophon should not have remarked any cities or towns in that quarter, between *Corsote* and *Carmande*.

Here it should be noted, that although the Euphrates, in latter times, has been generally avoided by the commercial caravans, because of the want of protection from the different governments, along its banks ; since their track would be notoriously known to the robbers of the desert ; yet that in better times the advantage of a certain supply of good water, and greater plenty of herbage, induced them to keep to the neighbourhood of the river, as long as its course did not materially diverge from the line of the route.\* And accordingly

\* An instance of this kind happened in 1789, when the power of the Sheik, whose territory extended along the southern bank of the Euphrates, in the lower part of its course, was exerted to keep that route clear of banditti : he himself encamping near the banks. A caravan, at that time, kept near the Euphrates for more than 90 miles of the way between Semowah and Basrah. The Sheik doubtless was well paid for the protection afforded : but this is no more than is exacted, under some form or other, by all governments.

There still remain in the line of the great desert route, certain fortified posts, whose use appears to have been that of giving protection, and also a supply of water, to the caravans. One of these, named *Al-Kadder*, a very capacious and lofty castle, built of stone, stands nearly opposite to the site of *ancient Babylon*, and was supplied with water from a branch of the Euphrates.

Another very remarkable one, (or rather *two* nearly adjacent to each other), stood at the opening of the pass, leading from the Syrian into the Arabian desert ; to the westward of *Thapsacus*. This was supplied with water from the well-known mineral spring of *Al-Kom*, by a subterraneous aqueduct of stone, of at least 11 miles in length ; and bespeaks an origin anterior to Mahomedan times.

From these, and other circumstances, one may conclude that a regular system of protection was established, across the Arabian desert (to support which the profits of commerce must have been very considerable), until the discovery of the passage to India by the Cape of Good Hope. And even down to the end of the 16th century, the Euphrates appears to have been the medium of a considerable commerce, between

travellers find that part of the course of the Euphrates, studded with towns, cities, and castles; either in a state of absolute ruin, or of great decay; in a very few instances only, having preserved their respectability, owing to some peculiar circumstances. In effect, the state of things (the ruins excepted) is much the same now, as in the time of Xenophon.

Xenophon does not pointedly remark the change of country, from a perfect level as he describes it after passing the *Araxes*,\* to hilly and mountainous at *Corsote*; but remarks it *incidentally* only, by saying that some of the Persian officers of rank *ran down a steep hill*.† He speaks of the very sterile nature of this desert: there was no grass, nor any other plant, but the whole country was bare: so that many of the sumpter horses died of hunger. Nor is this state of things at all uncommon in warm climates, even in tracts which cannot properly be reckoned deserts; since the herbage is in a manner burnt up, in seasons when violent heats, and a want of rain, have prevailed for any length of time.‡

Aleppo, Baghdad, and Basrah. (See Hakluyt's and other collections of Voyages and Travels).

\* "Even as the sea, and full of *Absynthium*." (Anabasis, Lib. I. c. 23.)

† Lib. I. c. 24.

‡ The narrative of the distresses occasioned by the march through this desert, furnishes an article of information, which shows that the mode of provisioning an eastern army, was much the same in ancient times, as at present; that is by a *travelling market*. (See also Lib. I. c. 7.)

It is said, (Lib. I. c. 24) that "at this time the army wanted corn, and there was none to be bought, but in the *Lydian* market, which was in the camp of the barbarians, belonging to Cyrus."

M. Larcher has a note on this passage, Vol. I. p. 53, "C'étoient les vivandiers de l'armée. Depuis que le Grand Cyrus avoit interdit les armes aux *Lydiens*, ce peuple ne s'appliquoit plus qu'au commerce, et même au trafic le plus bas. Voy. Herod. Lib. I. § 155 and 157."

The city of *Carmandé*, situated on the Arabian side of the Euphrates, lay opposite to the desert.\* M. D'Anville and others had placed this city in the quarter of *Corsote*; but Mr. Spelman near the *Pylæ*; and it appears by a notice in M. Larcher's preface, that a fragment of Sophenetes throws some light on its position, which was not far from the *Pylæ*. This fragment is preserved in Stephen of Byzantium: and is to the following effect, as quoted by M. Larcher:

"Au-delà de l'Euphrate, auprès de Pyles de la Babylonie, "étoit bâtie une ville nommée *Charmandé*."

In the Map to M. Larcher's translation of the *Anabasis*, *Carmande* or *Charmande* is placed directly opposite to the *Pylæ* (or rather to *Pyles*, which he regards as a *city* or *town*, and not as a passage through mountains, as most others seem to do). But the *Anabasis* (Lib. I. c. 25) describes a desert only, opposite to *Carmande*, according to the text of M. Larcher, (Vol. I. page 56): "Il y avoit au-delà de l'Euphrate et "vis-à-vis du lieu désert où campoient les troupes, une ville "grande et riche, nommée *Carmande*:"† Hence it would appear that there was no *city* on the *Mesopotamian* side, opposite to *Carmande*.

We should regard Hit as the *Carmande* in question.‡ It is indeed 20 G. miles above the assumed position of the *Pylæ*; but in speaking of a long extent of march, and in which towns

\* Lib. I. c. 25.

† Mr. Spelman translates the passage somewhat differently: "During their march "through the desert, they saw a large and rich city, on the other side of the Euphrates, "called *Carmande*."

‡ The name is written three different ways, in different MS. copies of the *Anabasis*: that is *Carmande*, *Charmande*, and *Charmanthe*. (Larcher.)

were very rare, perhaps the word *near* may not be altogether inapplicable. Moreover, Hit seems to have been designed by several different names: as *Is*, *Izzanesopolis*, *Ozo-gardana*, *Zaragardia*, and *Æiopolis*. Even in the march of Julian, which is so fully detailed, the name *Hit* is not mentioned, but appears to have been intended, by *Ozo-gardana* and *Zaragardia*, in Ammianus and Zosimus, respectively. In the former, *Ozo-gardana* is near the *Bitumen* fountains: implied to be those of Hit.\*

To this city, the soldiers of Cyrus's army passed over the Euphrates on floats or rafts, supported by the skins of which their tents were made; and either stuffed with dry herbage or inflated with air. The same was afterwards practised at *Cænæ*, on the Tigris; and the same kind of embarkations are in use at the present day.† Individuals use a single skin for the conveyance of themselves and their wares across the rivers.

It was in the neighbourhood of Carmande, that a quarrel arose between the soldiers of Clearchus and Menon, which had nearly been productive of very serious consequences to

\* Texeira, in his way from India to Europe, by land, speaks of the universal use of *bitumen* in the tract of *Babylonia*, in which it is produced in such plenty. He says, that the people call it *Quir*: that is meaning the Arabs, who certainly do call it *Keer* or *Geer*. Hence one cannot help suspecting that the term *Geer* or *Keer* has the same signification with the *Gar* or *Kar*, which enters into the composition of the above names; and which appears to refer to some circumstance common to them; very probably the bitumen fountains near Hit.

Abulfeda, however, in his Geography of Syria, calls the bitumen of the *Dead sea*, *Kbommar*; and which may possibly have been the origin of the name *Gomorrab*.

† See a description of the floats used in the Tigris, in the Travels of M. Thevenot. Much the same system prevails there now, as in the time of Herodotus and Xenophon.

the affairs of Cyrus ; on occasion of a personal insult offered to Clearchus. Menon, a Thessalian, was one of those dark characters, who set mischief a going, without appearing in it themselves. We find a sample of such men in all communities : it therefore becomes the duty of all communities to watch them ; but this duty is too often neglected till too late. Menon always discovers himself by an officious zeal in matters that are *within the law* ; but when there is a hazard of over-stepping it, he is only seen in the acts of others. The amiable Proxenus, the friend and patron of Xenophon, by his interposition arrested the progress of this tumult, which had a most threatening aspect ; and Menon escaped this danger, to be a witness of the captivity and murder of his more worthy colleagues, by the king of Persia ; and afterwards to suffer himself an ignominious death, from the hands of those whom he had benefitted by his treasons.

The treason of Orontas seems to have been detected a short time before they arrived at the *Pylæ*. For, a detachment of the enemy's horse were proceeding before them, burning the forage, and whatever else might be of use. And it was under the pretence of cutting off those horse, that Orontas meant to have deserted, with as many of Cyrus's as he could obtain from him.

On a cursory reading, it would appear as if some marches had been made, but omitted in the history, between the arrival of the army at the *Pylæ*, and the commencement of the 3 first marches through the country of *Babylon* ; at the end of which three marches, the review of the whole army took place. (Lib. I. c. 30.) But on a close investigation, it will appear that after Xenophon has conducted his reader to the *Pylæ*, in the course

of the geographical detail, he goes back in order to relate the most remarkable events that had happened, since they left *Corsote*; which was the last point or resting place in his description. Thus, after the quarrel opposite to *Carmande*, he says, that as they were marching forward, they saw the tracks of the enemy's cavalry, &c.; and this naturally introduces the history of *Orontas*, which had an immediate connection with that body of cavalry. But the chain of distances, or line of march, is not resumed, till all the events that had passed, during the 13 marches between *Corsote* and the *Pylæ*, had been described. There are other instances of this mode of relating the events, particularly between *Opis* and the *Zabatus*: and indeed, it appears to be the clearest, as well as the most impressive method.

It may be remarked that Mr. Spelman as well as Dr. Forster, had the same idea with the author, respecting the *suite* of marches; as may be seen in the map of the one; and in the geographical dissertation of the other, page 311.

The grand review of Cyrus's whole army took place about midnight, after they had advanced three marches into the plain of *Babylonia*. Night was chosen, no doubt because of the violent heats of the day, in that climate, and at that season (beginning of September). Cyrus had expected that the king would give him battle next morning; although this event did not happen till three days afterwards. But he was then arrived in the neighbourhood of the great canals of communication between the Euphrates and Tigris; which, with proper attention, might have been employed with great advantage, in obstructing his march.

In this review the Greeks amounted to 12,800 men, of

which 10,400 were said to be *heavy armed*; or composing the *Phalanx*.\* Clearchus was appointed to command the right wing of the Greeks; Menon the left. The native troops of Cyrus amounted to 100,000: and this combined force, according to the text, was destined to combat with eight times its number; if it can be supposed that the 900,000 with the king were all fighting men. But whatsoever was wanting in numbers, was supposed to be amply supplied by the courage and discipline of the Greeks.

It cannot be doubted that the number given for the amount of the army of Cyrus, was meant to express that of the fighting men, alone: because that, if a number equal to the usual proportion of followers, in oriental armies (at least in these days) was to be deducted from 100,000 it would leave a force far too inconsiderable for probability. But whether the 900,000 of Artaxerxes, were all fighting men, may reasonably be doubted.

It is said, that the king, when in the centre of his own army, was *beyond* the [*left*] extremity of that of Cyrus. Now on a supposition that the mode of drawing up the armies, was the same in both, the centre of the king's army should have been at a prodigious distance (that is some miles) beyond the extremity of that of Cyrus; but the text does not warrant a belief that the king's post in the centre, was far beyond the flank of the other. (See Lib. I. c. 35 and 37.)

\* The number of *heavy armed* here, differs very materially from the former part of the history; which gives no less than 12,100, instead of 10,400. The light-armed agree. The number at this review of 10,400 *heavy-armed*; and which might very probably have been reduced to about 10,000 after the massacre at the *Zabatus*; that is at the commencement of THE RETREAT; no doubt occasioned the term of the TEN THOUSAND; applied historically to this body of Greeks.

The reader is here presented with an authentic return of the numbers of fighting men, and of followers of every description, in a body of troops in the British service, sent across the continent of India, in 1778.\* This small army consisted almost entirely of native troops, or sepoy, officered by Europeans, and with an attendant corps of artillery.

Fighting-men of every description	-	6727
Followers	- - - - -	19,779
		<hr/> 26,506
<i>Ordu-Bazar, or Camp-Market ; estimated at</i>		12,000
		<hr/> 38,506

These numbers give in the gross, the proportion of  $5\frac{3}{4}$  to each fighting man ; but even the proportion taken on the followers of the army, *properly so called*, is as nearly as possible 3 to one.†

Now if the 900,000 be considered as the number of fighting men and of followers, collectively ; and the same proportion of 3 to 1 be applied, the number of combatants of course will be 225,000 ; or about double the number of the troops of Cyrus : and admitting the same kind of order in both, the centre of the king's army would have been nearly opposite to the extremity of that of Cyrus ; as the history seems to imply.‡

\* Commanded by General Goddard.

† Perhaps this fact should be kept in mind, when the reputed numbers of Xerxes's army are considered. The text would then appear more probable.

‡ Here it may be remarked, that the army of Abrocomas, from *Cilicia*, did not join the king till some days after the battle ; (Lib. I. c. 32,) and that the *Median* and *Susian*

After the review, and at day-light, some deserters from the king's army arrived ; but they seem either to have given false intelligence, or he must have halted by the way : for Cyrus marched that day, in order of battle, in the expectation of fighting, yet saw no enemy ; any more than on the next, when he passed the canals of communication, between the two rivers ; as he had previously done, a trench of 30 feet in breadth, and 18 deep ; but left unfinished, for the last 20 feet, towards the Euphrates ; and through this pass, Cyrus marched. He also found the bridges standing, over the four navigable canals : all which manifests a great degree of negligence, or of confidence, on the part of the king.\*

At length, on the second march from the canals, and when they were on the point of fixing their camp, the king's army suddenly appeared, and occasioned some confusion. They were then about 4 ordinary marches from Babylon.

Xenophon's description of the approach of the Persian army under ARTAXERXES MNEMON, against his brother CYRUS, will bear, at least, to be once more repeated. (Lib. I. c. 35.)

“ In the afternoon there appeared a dust, like a white cloud, which, not long after, spread itself like a darkness over the plain : when they drew nearer, immediately the

armies, did not arrive before the Greeks came to *Opis*, more than a month after the battle. (Lib. I. c. 13.) So that a great part of the Persian force was not present, at the battle of *Cunaxa*. See the remark of Xenophon, Lib. I. c. 24.

\* Diodorus (Lib. xiv. c. 5) says, that the king drew a trench to cover the baggage and the sick ; and then set off to encounter Cyrus. Possibly this may explain the matter of the *deserted* trench, which Cyrus passed within : this might have been at first intended for the above purpose ; but afterwards finding it too far advanced towards the enemy, they constructed the one spoken of by Diodorus, in a more retired situation.

“brazen armour flashed, and their spears and ranks appeared.\*

The battle of *Cunaxa* appears to have been lost, through the error of Clearchus, in not following the counsel; or rather, in not *obeying* the orders of Cyrus, to bring up his men against the centre of the enemy, in which the king was posted: for, says he, “if we break *that*, our work is done.” Now the king had such a superiority in numbers, that (as it has been observed before), when he stood in the centre of his own army, he was beyond the left wing of that of Cyrus: and Clearchus, fearing to be surrounded, could not be prevailed on, to withdraw his *right* from the river. Hence arose the principal mischief: and next to that, was the dispersion of the cavalry of Cyrus, in pursuit of that of the king. In order to understand how any attack could be made on the king’s post, after the above statement of the disposition of the two armies, it is necessary to mention, that the king, finding that no one opposed him in front, wheeled to the *left*, in order to surround Cyrus’s army. It was then that Cyrus advanced to attack the king, broke and dispersed the strong body of choice cavalry which attended him; but in the pursuit was himself left almost unattended, and in a rash and furious attack on the king, was slain by an obscure individual!

But in effect, Cyrus may be said to have fallen a martyr to Clearchus’s punctilios of European discipline; and want of knowledge of oriental warfare. Had he combated with a

\* —“sur les trois heures, on apperçut une poussière semblable à un nuage blanc, qui se répandit bientôt après sur toute la plaine, et la couvrit de son obscurité. Quand ils furent plus près, les yeux furent frappés de l’éclat de leurs armes de bronze, et l’on distingua les rangs et les piques.” (M. Larcher, Vol. I. p. 76.)

superior force of his own countrymen, he would have acted wisely, in keeping his flank covered : but the sequel proves, that the Great King would not venture to engage with the Greeks *alone*, even after the native army of Cyrus had left the field. We infer, therefore, that had Clearchus followed the advice of Cyrus, at the beginning of the action, and brought his forces opposite to the centre of the king's army, the event would have been totally different. No one can doubt, but that victory would have attended the steps of the Greeks ; and a victory in the centre, would either have placed the king in the power of Cyrus, or driven him out of the field.\*

That part of the enemy's line, which was opposed to the Greeks, was defeated, and pursued ; but do we find that the enemy attacked the *left* wing of the Greeks, because they had exposed it, by separating from their own line, in the pursuit ? And doubtless, had the enemy's line been broken in the centre, its remains, so far from attacking either of the Grecian flanks, would have fled outright, on the loss or discomfiture of their king, and his party. Cyrus was unfortunate in not being able to impress this idea on the mind of the Grecian general ; but he was clearly aware of what ought to have been done : and perhaps would not appear to slight his own native troops, by separating himself from them. Why were not the Greeks posted originally in the centre of Cyrus's army ; since he was aware that the king would be found in the centre of his own army ; and then brought up, as of course, against him ?

\* But we should then have been without the ANABASIS, the choicest piece of ancient Military History ; and fairly worth the history of all the Persian dynasties, since that period.

The small bodies of European troops, which encounter such great bodies of Asiatics, ensure victory more by *appearing* to despise the enemy, than by measures of caution. Their principle of attack, even, differs from that in European warfare : for as they cannot present any proportion of front to the enemy's line, they direct their attacks against a part of it ; and by defeating those whom they oppose, terrify and confound the rest ; who generally quit the field. And on any other system than this, against such disproportionate numbers, the fleets of Europe would be unequal to the task of wafting a sufficient number of combatants to the shores of Asia.

However, the general ability of the Greek commanders, is most strikingly displayed, in their conduct after they learnt the result of the battle ; and until the fatal day when the arts of Tissaphernes triumphed over the credulity of Clearchus, and certain of his colleagues. Their firmness during the negotiation for the truce ; and their caution in encamping separately from the Persians afterwards ; are proofs of it. Ignorant of the geography and nature of every part of the country except the desert track by which they came ; and which their experience would teach them, was the last, by which they ought to retreat ; deserted by, or deprived of, their friends, who possessed the requisite knowledge ; and surrounded by powerful enemies, whose affected friendship was more deadly than their hatred ; they had a choice of difficulties to encounter. Their enemies, however, by leading them towards the *Carduchian* mountains, in order to render their retreat, as they thought, more difficult, conferred a benefit which they did not intend : for although in the Carduchian mountains, the Greeks found an enemy whose attacks were more fierce, close, and

persevering; yet they had an earlier escape from them, than they could have had from the Persians, had they continued in the plains: and at the same time, the mountainous barrier, threw the Persians, of which so great a proportion were cavalry, entirely out of action; both immediately and eventually. Here then, the words of Xenophon were peculiarly applicable; for whatsoever may have been the original scheme, "FOR-TUNE PROVED A MORE GLORIOUS CONDUCTOR"! (Lib. II. c. 7.)

The state of the country of Babylonia appears to have been highly flourishing, at this period. Well cultivated, and abounding in villages and palm trees; and the canals and bridges in good order: but cities or large towns, seldom occurring. At present, all this fine tract is deserted: the canals choaked up, and rendered useless, either for the purpose of navigation, or of irrigation, or even to drain the lands, when too copiously inundated.\*

The groves of palm trees, which abounded here, in the times of Xenophon and of Julian, have also disappeared with the villages; and are only to be found in and about the principal towns; excepting in a few instances, where they mark the site of a place, not long deserted. Ammianus, speaking of the time of Julian's expedition, (in which he served), says, Lib. xxiv. that the date groves filled the whole country from *Mesene*† to

\* Texeira, in 1605, observes that this was the state of the country: the canals half filled up; and the extensive plains, that had supported a numerous population, were become an unproductive desert.

† The *Mesene* here intended appears to be the great island, formed by the separation of the branches of the *Tigris*, between Samarra and Baghdad.

There was another tract of the same name between the ancient course of the *Euphrates*, and the modern course of the *Euphrates* and *Tigris*, united; adjoining to the Persian Gulf.

the sea ; and that, which way soever a person turned, he saw palm trees with dates hanging on them : a certain proof of a populous country. Indeed palm trees are every where a sign of population. Baghdad is so full of them, that at a distance it is said to look like a forest of palms, with minarets interspersed.

Xenophon, in more than one place, in *Babylonia*, saw what he calls *palm wine*. Speaking of the villages in which they were quartered, after the truce, he says : “ Here we found  
“ wine, made of the *fruit* of the palm tree ; and also vinegar,  
“ drawn by boiling, from the same fruit.—Some of these they  
“ dried for sweetmeats.—The wine that was made of this  
“ fruit, was sweet to the taste ; but apt to give the head-ake :  
“ here also the soldiers eat, for the first time, the *pith* of the  
“ palm tree ; and many admired both the *figure*, and the pecu-  
“ liar sweetness of it.\* This also occasioned violent head-  
“ akes.” (Lib. II. c. 10.)

Ammianus also says that *wine*, as well as *honey*, is made from the fruit : and that the army of Julian, fed on the produce of the palm trees ; which was in great abundance.† And lastly,

\* This substance, whose name in the original is *the brain of the palm*, is by Spelman and Larcher, respectively, translated *pith* and *moëlle*. By modern travellers it is called the *cabbage* of the palm ; it “ is composed of the rudiments of the future leaves of the  
“ palm tree, enveloped in the bases, or footstalks of the actual leaves ; which enclose them as a tight box or trunk would do.”\* It forms a mass of convolutions, exquisitely beautiful and delicate ; and wonderful to appearance, when unfolded. It is also exceedingly delicate to the taste. Xenophon has justly remarked, that the trees from whence it was taken, withered.

† Julian’s campaign in *Babylonia*, was in May and June ; and of course long before the *ripening* of the dates. The wine and dates therefore, must have been those of the preceding season.

\* Sir Joseph Banks.

Herodotus says, (Clio, c. 193,) that the palm produces to the inhabitants of Babylonia, *bread, wine, and honey*. The wine must have been in great plenty: for he says that the boats which descended the Tigris, from Armenia, some of which were large, had palm wine for the principal article of their commerce. Much the same idea is given by Xenophon, when he speaks of the floats that passed the Euphrates at *Carmande*, and the Tigris at *Cænæ*.

It has but very recently come to the knowledge of the author, (or indeed of people in general, in this country), what is intended above, by *palm wine*. It was thought to be toddy, a juice drawn from various kinds of palms, by cutting off the branch intended by nature to produce fruit, and receiving from the wounded branch the sap which was intended for the nourishment of the future crop. But as toddy, although sweetish, when first drawn, is in a fermentation in the course of 24 hours, and then becomes sour and harsh, this could not have been the palm wine intended; which must have *kept* for some time, as it was carried on the rivers, during voyages of many days, and even appears to have been stored up.\*

The Travels of M. Burckhardt in *Nuba*† (Nubia), in 1813, have unravelled this mystery; and at the same time the probable cause of our ignorance concerning the subject. For the practice is discontinued in the countries above-mentioned; that is, *Mesopotamia* and *Babylonia*, where the date trees abounded,

\* Toddy is used with molasses, rice, and other ingredients, in the distillation of arrack. The Toddy of the date tree is said to be of an inferior quality to that from some other kinds of palm.

† *Nuba*, it appears, is the present (and probably the ancient) name of the country which we call *Nubia*.

and where the profusion of fruit rendered wine so plentiful ; because in modern times, the want of a proper distribution of water for irrigation, has left only a small proportion of date trees ; and it is probable that none of the fruit can be spared from the necessary demand for food. Kæmpfer, it appears, is silent on the subject of palm wine ; than which circumstance, nothing could more satisfactorily prove, the disuse of the practice of making it in those countries.

The following is M. Burckhardt's account of the palm wine, &c.

—" In all the larger villages of Nubia, the use of *palm wine* is very common : and at *Derr*,\* a vast deal of spirit is consumed. The wine does not taste amiss ; but it is too rich, and too thick, to be drank with pleasure.

" When the date fruit has arrived at its full maturity, it is thrown into large earthen boilers, and left to boil, without interruption, for 2 or 3 days. It is then strained, and the clear juice put into earthen jars, which are well shut up, and then buried in the ground ; where it ferments. It is left 10 or 12 days under ground ; at the expiration of which time, it is fit to drink. It keeps a twelvemonth, and then turns sour."

" The *aqua-vitæ* made from dates, is of a very good quality ; and keeps well for years."

" The upper classes of people at *Derr*, are every evening intoxicated, either with date wine or spirits ; of which, large quantities are consumed. They are sold openly. From *Siout*, southward, all through upper *Ægypt*, *date spirits* are made, and publicly sold ; the Pasha receiving a tax on it, from the inn-keepers."

\* *Derr* is the reputed capital of the country of Nuba or Nubia.

“ There is also made from the dates, a kind of *jelly*, or *honey* ; which serves the rich people for a sweetmeat.”

Thus we are indebted to M. Burckhardt for the solution of a problem, which had long perplexed the readers of those ancient authors, who describe palm wine as an article of commerce, conveyed to a distance; and which does not, of course, suit the description of *toddy*; although it was referred to *that*, because nothing else occurred, that could be taken for it.\*

There is a kind of honey or syrup made from the *date tree* ; (not the *fruit*), in Barbary, which is very satisfactorily described by Dr. Shaw, in his *Travels in Barbary* (page 225).

The Doctor says, that it is usual with persons of the best fashion, to entertain their guests on very extraordinary occasions, with *the honey of the date tree*. This, says he, “ they procure by cutting off the head of one of the most vigorous kinds ; and scooping the top of the trunk into the shape of a bason. When the sap ascends, it lodges in this cavity, “ during the first week or fortnight, at the rate of *three quarts*, “ or *a gallon*, a day : after which, the quantity daily diminishes, “ and at the end of six weeks or two months, the *juices* are “ entirely consumed, and the tree becomes dry, serving only “ for firewood, or timber. This liquor, which has a more “ luscious sweetness than honey, is of the consistence of a thin “ syrup but quickly grows tart and ropy, acquiring an intoxicating quality ; and giving by distillation, an agreeable spirit, “ steam, or *arâky* ; according to the general name of these “ people, for all hot and strong liquors, extracted by the “ alembick.”†

\* Toddy has also an intoxicating quality, after its fermentation.

† Herodotus had *heard* that the *Zyganles*, (a tribe seated in Barbary, in the quarter

With respect to the honey mentioned by M. Burckhardt, as being made from the *date fruit*, it may be very doubtful whether it be the same with that described by Dr. Shaw, as made from the *tree*. As the operation described by the Doctor, costs each time one of the most vigorous of the palms, (and which loss cannot be retrieved in that generation); and being only practised "*on very extraordinary occasions*," one may suspect that it is not the same kind of honey, with that mentioned by Herodotus and Ammianus in *Babylonia*; or by M. Burckhardt in *Nubia*: and that there is one kind of it made from the *date fruit*.

between Tunis and Tripoli), "besides the *boney* collected from their *bees*, made a great "deal more." (Melpom. c. 194.)

---

\*.\* Omitted in page 110, after the first paragraph:

It may be added, that M. Larcher's Translation, after describing the quarrel, at *Carmande*, (Lib. I. c. 25.) has this passage, "*après quoi l'on partit*." This is omitted in Mr. Spelman's translation.

## CHAPTER VII.

## FROM SITACE TO THE ZABATUS.

---

*Opis a doubtful position, in Geography, but referred to the site of the present Akbara—A Remark by Xenophon, respecting the Military State and Strength, of Ancient Persia—Villages of Parysatis—Cænæ supposed to be the present Senn—Deserts of Media—The Greeks arrive at the river Zabatus or Zab—Conduct of the Persian Chiefs, in respect of the choice of route, &c.—The Greeks could have returned to Iönia only by the north—Insidious conduct of the Persians, on the way—Great credulity of Clearchus, the immediate cause of the Massacre of the Grecian Generals—The Persians neglect to seize on the advantages offered, by the occasion—Distress of the Grecian Army, at the Zabatus—Confidence restored by the new Generals; and particularly by Xenophon—The auxiliary Grecian force, had not been formed by Cyrus, into one general command; but existed in separate, and independent bodies.*

**A**FTER crossing the Tigris at *Sitace*, 15 marches brought the Greeks to the river *Zabatus*; at, or near, its conflux with the Tigris; which takes place at about 42 G. miles below the present *Mosul*. In their way, they passed, successively, the

cities of *Opis* and *Cænæ*. Xenophon names this tract, *MEDIA*; but Arrian and others, with more propriety, call it *ASSYRIA*: for Media extended no farther westward than mount *Zagros*.

*Opis* is a position of considerable importance in ancient geography: yet the notices concerning it, are too scanty, to admit of its being placed with any kind of precision, or confidence; for although Strabo, Pliny, and Arrian, all place it at the Tigris, and in the quarter towards *Sittacene*, it is without any specification of positive, or even relative, situation. There is scarcely a position that floats more in uncertainty, in the works of geographers: and what is singular, the origin and course of the river (*Physcus*) that flowed past it, is equally problematical. It is to the march of Xenophon alone, that we are indebted, for what is known concerning its position.

He conducts the Greeks to it, in 4 marches (20 parasangas) from *Sitace*. So that, in order to place Opis at all, the position of the former, is first to be admitted. (See above, page 81, *et seq.*) It was also 7 marches short of *Cænæ*, at the Tigris, taken for the Senn of the Arabian and Persian geographers, 36 Arabic miles below Haditha, at the conflux of the greater Zab, with the Tigris; which conflux is about 42 miles below Mosul. According to these notices, Opis should have stood at 34 miles or more, above the site of Baghdad; or about 44 above *Sitace*.

The identity of the *Zabatus*, with the present greater Zab, cannot be questioned. In the first place, had the lesser Zab been the *Zabatus*, the Greeks would have come to the greater Zab on the 5th march of their retreat, when they were harassed by Tissaphernes; and under such circumstances, the

crossing of a river of 300 feet in breadth, and also deep, could not have been omitted by Xenophon. Moreover, the number of marches, from the Zabatus to the *Carduchian* mountains, will only suit the greater Zab: and more particularly, the ridge of hills near Zaco, on which the battle was fought on the 10th day of the march; and which affords a remarkable point of comparison; will agree only to the greater Zab.\*

\* It will be proper to state the particulars of the distance, along the Tigris between Modāin (that is the two cities of *Seleucia* and *Ctesipbon*) which is not far *below* the supposed site of *Sitace*, and Jezirah, which is not far *below* the supposed place of ascent of the *Carduchian* mountains; together with the general bearing, between the extreme points of Modāin, and the place of ascent. The reader will then be enabled to comprehend at once, the foundation of the geographical construction, of this part.

Baghdad is by observation in latitude	33° 20'
Mosul - - - - -	36 21

Mosul, according to M. Niebuhr's line, is at 1° 17' to the west of the meridian of Baghdad, whence the general bearing between them, will be about N. 19° W. and S. 19° E.

Then Modāin is 19 G. miles to the S. E. of Baghdad; and the site of *Sitace* about 11.

Jezirah, according to the result of the combined authorities of Messrs. Sullivan, &c. lies about 72 G. miles to the N. W. of Mosul. And from Jezirah, the place of ascent is taken at 11 G. miles, in the direction of N. W.  $\frac{1}{2}$  W.

Distances between Modāin and the Mountains:

From Modāin to Baghdad	- - - - -	19 G. Miles.
Baghdad to Akbara	- - - - -	32 $\frac{1}{2}$
Akbara to Samarra	- - - - -	34
Samarra to Senn (conflux lesser Zab)	- - - - -	45 $\frac{1}{2}$
Senn to Haditha (conflux greater Zab)	- - - - -	38
Mosul	- - - - -	42
Jezirah	- - - - -	72
To the place of Ascent	- - - - -	11

The numbers shew the distance, on the construction. The Arabian geographers reckon 61 farsangs between *Bagdad* and *Mosul*, equal to about 194 G. miles: and on the construction, about 192 are found.

As, therefore, the greater Zab, alone, can be taken for the *Zabatus* of Xenophon; so, according to the history, OPIS, taken at 20 parasangas above *Sitace*; and 50 below the conflux of the *Zabatus* with the Tigris,\* can have stood in no other position, (taken generally), than about 34 G. miles in *direct* distance above the site of Baghdad; near which position, during the caliphate, stood a city of note, named Akbara, or Okbara. It may be added, that if Senn be the same with the *Cænæ* of Xenophon, 7 marches,† or 74 G. miles above *Opis*, this will also have a *general* agreement with Akbara; which is short of 80 miles below Senn.

Xenophon describes the country beyond *Opis*, northward, to be the *desert* part of *Media*; which is a circumstance in favour of the position in question: for even in the present times, under the wretched government of the Turks, the country to the extent of 30 miles to the northward of Baghdad, is one of the most fertile imaginable; being alluvial, and well watered, by canals from the lesser Deäfla river; but beyond that, a desert, according to M. Niebuhr.

*Opis* stood on the river *Physcus*, 100 feet in breadth, and near its conflux with the Tigris; for though Xenophon is silent respecting the Tigris, other authors connect it with *Opis*: for example, Alexander sailed up the *Tigris*, to *Opis*. The information is so defective concerning the tract adjacent to the eastern bank of the Tigris, in that quarter; that we know not even the place, where the river crossed by Abdulkurreem, and by Abu Taleb, in their way from Dokhala to Samarra, joins the Tigris. *That* may have been the river of *Opis*: but it

\* Anabasis, Lib. II. c. 18.

† Ibid.

may also have been a branch of the lesser Deällah, or a canal from it.\*

Had the position of *Opis* been left at large, without any regard to its distance from any other place, one would have fixed on *Dokhala* for its site. There, a river, answering to the description of the *Physcus*, is known to join the Tigris; that is, the lesser Deällah, (said to be a branch of the greater;) and it lies in the direct road from *Media* to *Babylon*, by the upper road. But then, *Sitace* must have stood at a considerable distance lower down the Tigris, than the site of *Seleucia*; the distance of 20 parasangas, requiring it: and this seems a very improbable situation for *Sitace*.†

It was at *Opis*, that the Greeks met a large Persian army, coming from *Susa* and *Ecbatana* to the assistance of the king.

There also, Alexander landed, after his expedition up the Tigris, from *Susa*; and proceeded from thence towards *Ecbatana*. But both of these circumstances may be satisfactorily accounted for, without supposing that *Opis* lay in the direct road from Babylon to Ecbatana. Alexander's errand up the Tigris, is said to have been, to demolish the wears and obstructions to the navigation: therefore he went as high up the river, as was necessary for his purpose; without any regard to the road to *Ecbatana*. And with respect to the Persian army, coming from thence, it might either have been directed to join Tissaphernes at *Opis*, (as it will appear that it was intended to join him), or may have come that way merely

\* The river mentioned by Abdulkurreem, occurred at 6 hours short of Samarra, when on his way from Baghdad, in 1741. Abu Taleb also crossed a river in about that situation.

† It must not be omitted, that Mr. Jackson, in 1797, saw a caravanserai, named *Hope*, at the distance of a very few miles up the river *Dokhala*. (Page 113.)

through convenience. And indeed, Akbara, the supposed site of *Opis*, is not more than a good day's march, out of the direct road from *Ecbatana* to *Babylon*.

*Opis* was a large and populous city, in the time of Xenophon. Strabo describes it as the *emporium* of the places round about: but whether he spoke of his own times, or of an earlier period, we know not. It was no doubt, a place of consideration, in the time of Alexander.

The circumstance of meeting a Persian army at *Opis*, together with the length of its march, and destination, illustrates a remark of Xenophon's, (in Lib. I. c. 24.) respecting the military state of the Persian empire. "It was obvious (says he) to any person of attention, that the Persian empire, though strong with regard to the extent of the country, and numbers of men, was however weak, by reason of the great distance of places, and the division of its forces, when surprised by a sudden invasion." It was now about 35 days since the battle: but even that, is but a short space, in comparison of the length of warning, which the king had received from Tissaphernes.

From *Opis*, the Greeks made 6 marches (30 parasangas) through the desert part of Media; and arrived at some villages belonging to Parysatis, the mother of Cyrus and of Artaxerxes. "These," says the historian, "Tissaphernes, to insult the memory of Cyrus, gave the Greeks leave to plunder of every thing but slaves."\* And from thence, 5 marches (20 parasangas), through a desert, with the Tigris

\* It may be remarked that here, as well as in some other places, the Greeks were always ready to plunder, when authorised; or when they thought they had an excuse for it.

on their left, brought them to the *Zabatus* : in all 15 marches from *Sitace*.\*

*Cænæ*, said to be a large and rich city, lay on the opposite, or western side of the Tigris, at 4 marches *short* of the *Zabatus*. From this place the inhabitants transported provisions across to the camp, on rafts, supported by inflated skins. Wine is enumerated amongst the articles of provisions here; as well as at *Carmande* and other places. *Cænæ* has already been spoken of, as the *Senn* of the oriental geographers; which is situated opposite to the conflux of the lesser Zab with the Tigris. Xenophon has not mentioned this river, as it probably occasioned no difficulty or delay. It is the *Caprus*; as the greater Zab is the *Lycus*, of ancient geography.

It appears then, that the first six marches from Opis, *through the desert part of Media*; and the next five, also through a desert country, which brought them to the *Zabatus*,† will agree very well with the descriptions of the country by modern travellers; the position of *Opis* as given in the preceding pages, being admitted. For M. Niebuhr found the whole country a desert, from the Korfa hills (near which, *Opis* is supposed to have stood) to the neighbourhood of Dakook; which is opposite to *Senn*, or *Cænæ*. And the banks of the Tigris, as well as the country to a considerable extent, within them, is described by M. Thevenot and others, to be extremely rough, hilly, and wild; and much infested with lions, between the two Zabs: and even *above* the conflux of the greater Zab, or *Zabatus*, to a considerable distance.‡ These tracts then, are the

\* Lib. II. c. 18 and 19.

† Lib. II. c. 18.

‡ See the Travels of M. Thevenot, Part II. Chapter 13.

deserts, through which Tissaphernes led the Greeks; departing from the great road, which lay considerably to the eastward.

The Tigris is not mentioned in the first 6 marches: and it appears probable that they crossed the Hamrun ridge of hills,\* opposite to Samarra; and did not meet the Tigris again, till they came opposite to *Cænæ*. And it is particularly remarked, that during the last 5 marches, which brought them to the *Zabatus*, they *had* the Tigris on their left. The account is given in so general a manner, that we are not to expect, strictly, that the *whole* of the six days, thrown together in one line of march, should have been wide of the river; or in the other case, that all the five should have kept to its bank. General notices alone, are to be expected; and here they are found to accord.

Here it may be proper to say a word concerning the conduct of the Persian chiefs; and to enquire what part of it, may have been rendered unavoidably necessary; even had they been sincere in their intentions of performing the articles of the truce: for it is possible that they may have been blamed for every act, indiscriminately.

The nature and position of the vast deserts, that shut up both sides of the Euphrates, in the vicinity of *Babylonia*, have been already spoken of, in the course of the work: that on the south and west, extending into the peninsula of Arabia; and that to the north, occupying the whole breadth of Mesopotamia, below the river Khabour; (the Araxes of Xenophon). The reader, therefore, will be aware, that provisions and

\* This is a low chain of rugged hills which extends from the *Arabian Desert* to *Susiana*.

forage for an army of more than 12,000 men, with their appointments; together with an army of observation to attend them; (for it can in no wise be supposed that such a body could be allowed to return, unwatched;) could not possibly be procured on any of the routes that led to the westward, or north-westward from *Babylonia*. Moreover, the army of Cyrus had recently consumed or destroyed, all that lay in the line of the Euphrates. Had the Greeks even been allowed to retire at their discretion, from the truce or provision villages, it could only have been by the *north*, that they could, at any rate, have existed, on their return homewards: first passing the Tigris to the eastward; and after tracing the great road through *Assyria*, by *Arbela*, &c. recrossing the Tigris, in the quarter of ancient *Nineveh*. There they would have entered, what was at that time, a populous district of *Mesopotamia* (although now, absolutely deserted); and thence would have passed through *Asia Minor* to *Iönia*. But such a space, which required *three months of continual marching*, only seems practicable in the event of Cyrus's having been successful; and sending home his Grecian auxiliaries, as friends. But in the quality of enemies, could the most sanguine amongst the Greeks expect that they could have made their way from the heart of the Persian empire, to its western extremity?

The terms of the truce were, that the king should "conduct them without guile, into Greece; providing a market for them; or in failure thereof, the Greeks were to supply themselves with provisions: but in both cases to pay for what they had."

It could be satisfactorily proved, that even the Persians themselves, could not conduct the Greeks home any way but

by the *north* : or perhaps even without carrying them beyond the Tigris, in *some* part of the route : but there was no need to go round by *Sitace*, when they could have gone directly to the neighbourhood of *Opis*, or Samarra; and have easily crossed the Tigris, at any point, with the facilities possessed by the Persian government. If it be urged, that the accommodation of the permanent bridge at *Sitace*, was the inducement, to go round, there was yet no necessity for halting 20 or more days before they began their march : or to lead them through the desert tract between the two Zabs.

But the delays of every kind were evidently contrived to gain time, to assemble choice troops from the different quarters of the empire. One army, as the reader has seen, only arrived at *Opis*, from *Media*, on the day the Greeks passed through it.

There appears to have been a treacherous design in marching them through the desert tract, along the Tigris, between the two Zabs. For the proper road, to the north, from *Babylonia*, lay 30 miles or more, inland from the Tigris : and passed through a well inhabited country, by *Arbela*. Alexander came by this route ; as well as all the modern travellers : whilst those who descend the Tigris, are made sensible of the wild and impracticable nature of the country through which it flows ; particularly on the eastern side.\*

Through this wild and inhospitable tract however, the Greeks were conducted to the *Zabatus*, near the place where it joins the Tigris. Besides the difficulties arising from the nature of the country, and the peculiarity of their situation, which led the individuals of the respective armies into perpetual

\* See M. Thevenot's Travels, Part II. Chapter 13.

quarrels, they had an insurmountable barrier in the Tigris, a deep, wide, and rapid river; had they been inclined or necessitated to escape that way; and in front, the Zabatus, also a large river.

It was then, in this very critical situation, that the enemy, by proceeding to treacherous, and sudden hostility, plunged the Greeks into the greatest peril, and the deepest distresses, by the assassination of their principal officers. They must have supposed, that the general confusion that would arise from the want of proper officers, would produce inaction, until they were subdued; either by the power of numbers, or by hunger, in so desolate a situation.

This line of route was perhaps fixed on, at the outset, with a view to their destruction: and it may be concluded, that the Persians were constantly lying in wait to strike a blow: but that till this time, they were baffled in the attempt, by the countenance and by the vigilance of the Greeks; who perhaps escaped snares, of which they themselves were unconscious.

It appears, moreover, that Tissaphernes originally designed to lead the Greeks amongst the northern mountains; for during the conference between him and the Greek generals at the *Zabatus*, before the massacre, he speaks of the "mountains within their sight, over which *the road lies*;" &c.\* Now it is certain that he pretended to escort them towards Lydia and Sardis; and had no occasion to cross any of the chains of mountains, that were in sight from the *Zabatus*; if he meant to conduct them fairly: for their route through *Assyria*, lay to the south of *Taurus*, and its several branches.

\* Lib. II. c. 21.

It is probable that Tissaphernes meant the ridge of Zaco, where he afterwards attacked them, on the 10th march from the *Zabatus*; and placed them in so perilous a situation.

Upon the whole, it may be supposed, that the Persians concluded the truce, originally, because at the moment, they not only stood in awe of the Greeks, but also thought they could better accomplish their destruction, by fraud and delusion, than by open and immediate hostility. That they afterwards planned their schemes so, that if they might not be able to accomplish their destruction, they might perform their engagements in the mode the most convenient to themselves: but that they never lost sight of the hope, any more than of the means, of destroying them: and for this purpose made use of every wile, to create delay at the commencement; to lead them into hazardous situations, on the march; to ensnare their prudence; and to tamper with the wavering, or treacherous, amongst them. No trait of virtue, honour, generosity, feeling, or even of admiration of their conduct, is shewn: but all is empty profession, and deep dissimulation, in order to conceal dark and murderous designs. Such were the Persian chiefs of Xenophon's days.\*

The history of the conference between the Grecian generals

\* The Persians of the time of CYRUS the Great (about a century and a half before the date of these transactions) are represented by Xenophon, in the *Cyropædia*, to be of a very different character: since a main part of their education is said to have consisted in learning how to practise justice; and to speak the truth. Were those the real manners of the times, or did Xenophon take too much upon trust? Yet 150 years may doubtless very much change the manners of a nation; more especially when that nation had conquered all those round it, and was grown rich and luxurious.

The Persians of the present times do not seem to be much better, than those of the days of Xenophon.

and Tissaphernes, which led to the massacre of the former, by Clearchus's falling into the snare so artfully laid for him, is related very circumstantially and clearly, by Xenophon.\* By that, it appears, that the credulity of Clearchus, was beyond all example: and is the more remarkable, in that he was himself so deeply impressed with the idea of mutual jealousies and suspicions, that he sought an explanation. But Clearchus had in his turn, been guilty of treachery and murder, at *Byzantium*, much in the same kind of way; and like other murderers, was perhaps bereft of his judgment and presence of mind: and thus drew down a just punishment on himself.

The treacherous massacre of the Greek generals and other officers; together with the consequent and sudden hostility at the *Zabatus*; might have effected the entire destruction of their army, had they not been accustomed to encamp apart from the Persians, at the distance of a parasanga: which cautious measure appears to have been adopted from the beginning. This gave the Greeks time to stand to their arms, before the Persians could attack them; and as villainy seldom sees its way clear enough, to accomplish its utmost designs, the Persians do not seem to have taken such advantages, as the occasion offered. Had they kept the main body of their cavalry ready to attack the Grecian camp, at the instant of the massacre, instead of sending a detachment only, to scour the plain, and cut off stragglers, irreparable mischief might have been done. For it may be perceived, that the Greeks found themselves in an awkward situation, when the messenger brought the intelligence of the sudden approach of the king's army, at *Cunaxa*: which seems to shew that the Greeks required a considerable

\* Lib. II. c. 19, *et seq.*

time to prepare for, and to arrange their order of battle: and on the present occasion, the persons from whom the orders should have proceeded, were taken away. Therefore, the distress of the Greeks was very great; and it chiefly arose from the absence of those officers; 25 in number: for of the ranks, 200 only, with some stragglers on the plain, were massacred. Amongst those officers, were the generals highest in command; and moreover, those who had raised a principal part of the men, of which the auxiliary force consisted: so that those soldiers had lost, not only their *commanders*, but also their *patrons*; to whom they looked for immediate protection: instances of which patronage appear, in the course of the history.\*

But in respect of discipline and resources, the loss appears to have been fully supplied, in the sequel. The whole course of events sanctions their choice of new generals: and with respect to the other officers, little doubt can arise, that among any disciplined body of 12,000 men; twenty persons qualified to supply the places of as many officers, under the rank of commanders of corps, would be found. For, it is stated, that these troops had been long inured to war, in other expeditions: and it must be recollected that the *Peloponnesian* war was but lately terminated.

According to Xenophon, (Lib. III. c. 1.) the Grecian army, on the evening which succeeded the massacre of their officers, were in great distress. "They considered, that they were "surrounded on all sides, with many nations and many cities, "all their enemies: that no one would any longer supply

\* For example, in the quarrel between the soldiers of Menon and Clearchus. (Lib. I. c. 25.)

“ them with provisions : that they were distant from Greece  
 “ above 10,000 stadia,\* without a guide to conduct them ; and  
 “ their road thither intercepted by impassable rivers. That  
 “ even those *barbarians*, who had served under Cyrus, had  
 “ betrayed them, and that they were now left alone without  
 “ any horse to assist them. By which it was evident, that if  
 “ they overcame the enemy, they could not destroy a man of  
 “ them in the pursuit, and if they themselves were overcome,  
 “ not a man of them could escape. These reflections so dis-  
 “ heartened them, that few ate any thing that evening ; few  
 “ made fires ; and many that night, never came to their quar-  
 “ ters ; but laid themselves down, every man in the place  
 “ where he happened to be ; unable to sleep, through sorrow,  
 “ and a longing for their country, their parents, their wives  
 “ and children, whom they never expected to see again.”—

It may be supposed that this despondency was general amongst the officers, as well as the soldiers : they being accustomed to look higher, than to themselves, for confidence and resources.

Xenophon was the soul that re-animated this body of Greeks : and perhaps, eloquence was never employed with more effect, than in his speeches to the army, on occasion of electing new generals. He saw that they had “ nothing be-  
 “ fore their eyes but sufferings ; and required that their

\* This number, which at first sight one concludes to be extremely vague, does really approach to the number of stades that they were distant from Ephesus, (the point at which Xenophon's reckoning of the distance commences,) by the nearest route from the *Zabatus* ; and allowing for the usual inflexions of the road. It might be about one-thousand English miles. Although the distance *marched* from Ephesus to the field of battle, was more than 16,000 stades, yet much of the distance was consumed by counter marches and circuitous routes, to accomplish particular purposes.

"thoughts should be turned to action." He adduces every argument that could reconcile them to their present situation, or encourage them to persevere, in hopes of improving it.\*

Although Xenophon says (Lib. II. c. 5.) that "Clearchus *alone*, was equal to the command (of the army), the rest *being* without experience;" yet this, it may be conceived, does not apply to the technical part of the military command, so much as to that which comprised the duty of a statesman, in the use and employment of the army in future: and in the care of its general interests. He was to represent the STATE, as well as the Military COMMANDER.

The auxiliary Grecian force of Cyrus, had not been formed into one general command, but was considered as a number of separate corps, in common with the other troops, which composed the army at large: so that Cheirisophus, Proxenus, Menon, &c. were altogether independent of Clearchus; and of each other. But after the death of Cyrus, the auxiliary force becoming a separate army, a commander in chief became necessary; and Clearchus, as we find, was submitted to, by tacit and universal consent (Lib. II. c. 5.); "not as being elected,

\* The whole of his speech on this occasion, (Lib. III. c. 12,) is worth attention; but more particularly the manner in which he states to the soldiery the advantages which infantry have over cavalry: which is done with great address, as the most formidable arm of the enemy's force consisted of cavalry.

"If (says he) any of you are disheartened because we have no horse, in which the enemy abound, let them consider that ten thousand horse are no more than ten thousand men; for no one was ever killed in an action by the bite or kick of a horse. The men do every thing that is done in battle. But further, we are steadier upon the ground than they on horseback; for they, hanging upon their horses, are afraid not only of us, but also of falling; whilst we, standing firmly upon the ground, strike those who approach us, with greater force and a surer aim. The horse have but one advantage over us, they can fly with greater security."

“ but because they were sensible that he, alone, was equal to “ the command.” The same idea of superior merit, appears throughout, by his being always regarded by Cyrus, as the virtual head ; but without a formal acknowledgement of it. Doubtless Cyrus kept this body of troops in a disjointed state, to prevent any mischief to himself, from a consciousness of its own strength, had it been united under one able commander. He might also encourage some degree of jealousy amongst the commanders of the different corps ; ( as in the case of Clearchus and Menon ) in order to prevent too close a combination of interests.

Upon the whole then, it was not so much the *want* of proper persons, to fill the vacancies, occasioned by the massacre ; as that the troops felt a want of confidence in themselves, until they were filled up.

## CHAPTER VIII.

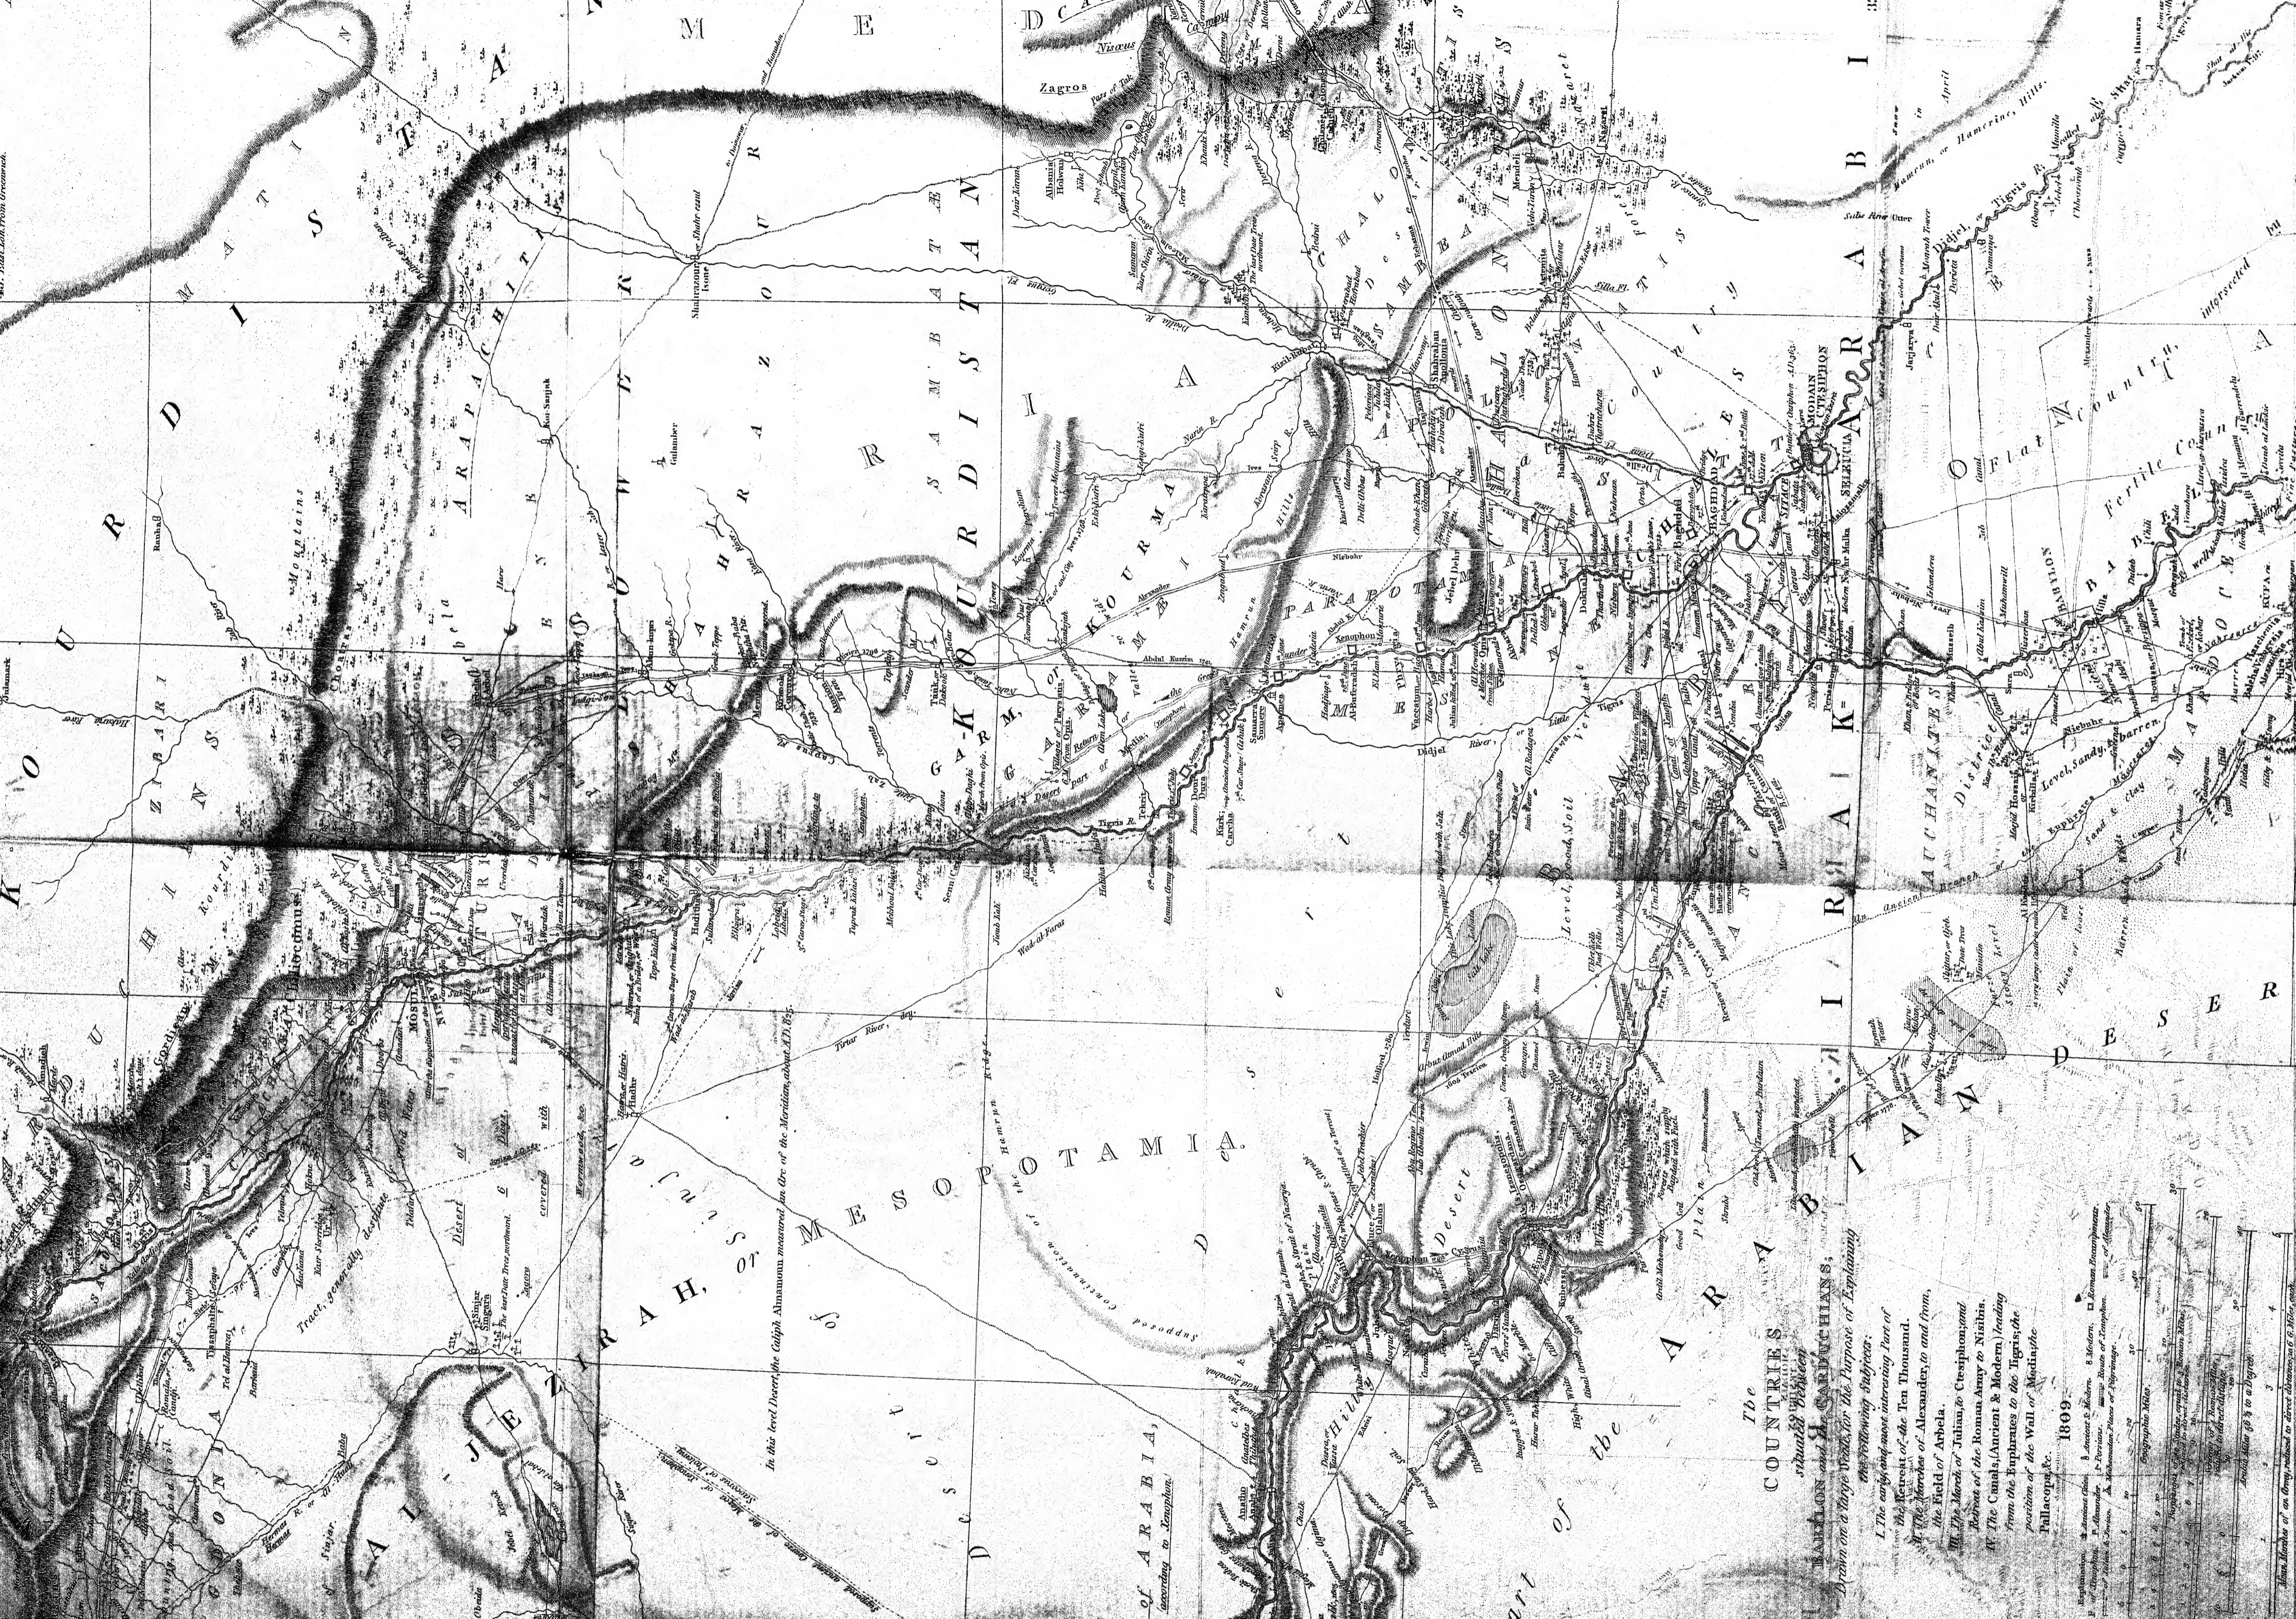

RETREAT OF THE TEN THOUSAND GREEKS, FROM THE RIVER  
ZABATUS, TOWARDS THE CARDUCHIAN MOUNTAINS.

---

---

*The TEN THOUSAND commence their RETREAT; and cross the river Zabatus, in the face of the Persian Army—Order of March—The first march unpromising; through the want of Cavalry, and effective missile weapons—Both defects supplied; and the enemy repulsed on the second march—Continue their Retreat; the enemy only making desultory attacks—Persian practice of shooting backwards, in their retreat—The Greeks pass by the walls of an Ancient City—Improve their Military Disposition, preparatory to their sixth march—The Persians now keep at a wary distance, until the tenth day; when the armies arrive at a ridge of hills, which shuts up the plain, to the banks of the Tigris—Recognised in the ridge situated above Zaco—Calculation of the Distance by the Route, between the Zabatus and the Hills of Zaco—Description of the Zaco Hills, by Mr. Sullivan, and Dr. Howell; and of the same Hills, by Xenophon—Battle on those Hills, on the day of the tenth march from the Zabatus—Modern town of Zaco—Its District, the Sacopodes of Strabo.*

**F**ROM the river *Zabatus*, where the RETREAT properly commences, the TEN THOUSAND pursued their way, keeping near

to the eastern bank of the Tigris : having crossed the *Zabatus*, at the place of encampment ; which, from circumstances, must have been near its conflux with the Tigris.\*

It appears extraordinary that Xenophon should be silent, respecting the mode of passing the *Zabatus*. It was performed under the eye of the enemy, who did not attempt to molest the Greeks, although in full day-light : for no kind of obstruction or difficulty is mentioned. (Lib. III. c. 15.) Yet travellers universally cross it on floats, in the line between Mosul and Arbela ; where it is reckoned very deep and dangerous : and the Greeks crossed it much lower down. Xenophon reckons it 400 feet wide ; and modern travellers allow it to be half the bulk of the Tigris ; which river, however, is only about 300 feet wide at the bridge of Mosul.† But one cannot suppose otherwise, than that the *Zabatus* was fordable, where the Greeks crossed it. It was in the latter end of October ; when the Tigris, (and probably the Zab also,) would be low.

The Greeks marched only 25 stadia, or about two miles and a half, the first day : because the plan which they had previously arranged, was to stop at certain villages to collect provisions ; which, under their present circumstances, was become indispensably necessary.

Their military disposition, on the march, was a hollow,

\* The reader is referred to the Map No. III. for the detail of the route of the Greeks, from the river *Zabatus* to the *Carduchian* mountains. The course of their retreat, brought them to the bank of the Tigris, in little more than one march from the *Zabatus*.

† The bridge had twenty pontoons only. It is probable that they placed it, at a narrow part of the river ; so that 300 feet cannot be taken for the ordinary breadth of the Tigris ; any more than 400 for that of the *Zabatus*. The Tigris is more probably between 400 and 500 ; the *Zabatus* only 300 feet, in breadth.

*equilateral* square; formed by the heavy armed men, or *Phalanx*; with the baggage within it. This latter had previously been reduced to those articles, alone, which were required merely for use in war, or for the support of life. Tents and carriages were therefore destroyed, of course. The light armed troops, though a very large body, (having been 24,00 before the battle of *Cunaxa*,) are not mentioned in the account of the disposition; but it may be collected, elsewhere, that they were distributed, *generally*, round the exterior of the square: but some also, with the baggage, in the centre of it. For it is said, that during the battle on the hills [of Zaco] on the 10th day's march, the targeteers were brought up from *the right of the square*: and in the attack of the hill, on the 14th, the targeteers were *left* by Xenophon, *to protect the rear*, when the enemy were in sight, threatening it. And in the same affair, the targeteers from the *front*, and those that were in the *middle* of the *square*, composed part of the detachment sent with Xenophon to dislodge the enemy from the summit before-mentioned; which commanded the road.

The movements of so large a body, formed in so unusual and inconvenient an order of march, *for a length of time*, must necessarily have been slow: and were probably rendered yet slower, by the necessity of accommodating its motions, at all times, to those of the miscellaneous mass contained within it.

The depth of the lines which composed the sides of the square, is not mentioned; but possibly, might not have been equal throughout. Since they had numbers, more than sufficient to form a square of any reasonable extent and depth, to protect the baggage and stores, the grand point for consideration

would have been, the necessary extent of front to be given to their *lines of battle*; (for such the sides of the square are to be considered) in order to oppose a sufficient force to the attacks of the enemy. The whole force of heavy-armed, would have admitted fronts of 500 men; had they been drawn up with such a depth only, as would allow all the different ranks to present their pikes to the front; which, according to Polybius (lib. xvii.), was *five*. But such an extent would have embarrassed their movements; and been unnecessary in every other point of view. Moreover, very much less than half such an area, would have sufficed. One might conclude, that fronts of about 300 were sufficient: and allowing a depth of *eight*, ten thousand men would give *fronts* of about 315. And even then, the square required a breadth of at least 500 feet to move in. It will soon appear that they were compelled to reduce this extent of front.

Thucydides relates, (Lib. V.) that at the battle of *Mantineia*, a little more than 20 years before the expedition in question, the *Lacedæmonian* order of battle was *eight* deep. And as the order and discipline of this body of Greeks, may be supposed, from known circumstances, to have partaken very much, if it was not absolutely, of the *Lacedæmonian* character, a depth of eight, appears very likely to have been adopted. And hence it may also be inferred, that the depth of *four*, at the review at *Tyriæum*, was that of *half files*. (Anab. Lib. I. c. 7.)\*

\* At the battle of *Leuctra*, 30 years after the date of this expedition, the Thebans reduced the depth of their right wing to *six*, the better to oppose the extended line of the Spartans. So that, although the general depth of the phalanx was regulated; yet it was changed, when occasion required it.

Considering the extreme weakness of the angles of the square, one may conclude

The first deficiency felt, was that of cavalry,\* and slingers, to repel those of the enemy, who taught them this want, during the first very short march; which indeed presented a very unpromising aspect. But the Greeks surmounted every difficulty: they halted during the whole of the succeeding day; and employed it in equipping and mounting 50 horsemen, on the best of the horses, that were found among the baggage, &c.: and also in forming a body of 200 slingers, out of the *Rhodians*, and others, in the army. These new corps saved the Greeks from attacks that would finally have impeded their march, and wasted their strength; for the missile weapons of the Persian cavalry, were so greatly superior in point of *range*, to those of the *original* light armed corps of the Greeks, that the latter had been compelled to retire for shelter within the square; nor could the heavy armed, of course, make any impression on an enemy at a distance. But the reception given to the enemy by the *new* light corps, and horse, on the next day, small as their numbers appear, kept them at a distance the rest of the day; which was the *second* march from the *Zabatus*; and which brought them once more to the side of the Tigris.†

that they had some method of *rounding them off*; at this time: or of cutting them off, so as to form an irregular octagonal figure.

\* The only cavalry which the Greeks brought with them, 40 in number (*Tbracians*) deserted the day after the battle of *Cunaxa*. Whilst the Greeks formed a portion of the army of Cyrus, they of course felt no want of cavalry.

† There needs no argument in favour of employing different kinds of weapons: as occasions happen, when only a particular kind of weapon can be used with effect; and which at those times, often decides the fortune of the day. This applies to the sea, as well as the land service. The *Pique* would not have been taken, but for the musquetry of her adversary. The *Pbalanx* had no means of repelling a charge of missile weapons;

The length of this march, is not given: but for a march, in order of battle, it may be supposed to have been rather long, as they marched undisturbed the greater part of the day; after the repulse given to the Persian horse, and slingers, under Mithridates. If 4 parasangas are allowed (and 5 constituted an *ordinary* march), this would bring them, in our geography, somewhat beyond the site of the *wear* across the Tigris, seen by Thevenot and others, above the place of the influx of the great Zab. Xenophon found near this encampment, a large uninhabited city, named *Larissa*. (c. 18.)

On the 3d march, they proceeded *unmolested* the whole day, and advanced, according to Xenophon, 6 parasangas, or nearly 17 British miles. Here he describes a large city and castle named *Mespyla*, both uninhabited. The extent of the city is said to have been no less than 6 parasangas in circuit, inclosed with a wall of great height and thickness. More will be said respecting it presently. (c. 19.)

The 4th day they marched 4 parasangas, and were menaced with a close attack from the grand army under Tissaphernes. Notwithstanding the vast superiority of numbers, nothing more was done than the discharging of some arrows, and stones: but the enemy were driven away by the leaden balls from the Rhodian slings, which went farther than even the Persian arrows.\* It was remarked, that the body of troops

and therefore was imperfect, without a due proportion of light troops, and of cavalry. A fatal instance of this kind afterwards happened to the *Peloponnesians* of this army, in Asiatic Thrace. (Lib. vi. c. 16.)

\* Xenophon mentions the practice of the Persians, of shooting backwards from their horses, as they retired. This practice has often been referred to the Parthians, alone; but it here appears to have been in use before the Parthian dynasty. The reader is

which the Greeks met at *Opis*, on their way from *Media*, were in the field this day. So that here is a kind of proof, that the delay at the truce villages in *Babylonia*, was studied: and partly, it may be concluded, to bring up these troops.

The Greeks, after refreshing themselves the following day in the villages contiguous to the camp; and collecting provisions for a future time, marched on the succeeding day (the 5th march) *through an open country*;\* Tissaphernes harassing them at a distance.

The length of this march, is not given; but supposing it to be of about 4 parasangas, it would have brought them to the site of ancient *Nineveh*, which lay directly opposite to the present city of Mosul.† *Nineveh* could not but have been known, historically, to every well-informed Greek; but the little leisure left to curiosity, at this time, might account for its site being passed over, unobserved: or even encamped on, without its becoming an object of notice.

However it may be suspected, that Xenophon has transposed some of these encampments; as it is *known* that he has done, some particulars on the coast of the Euxine; and as may be *suspected* he has done, between the *Daradax* and *Araxes* rivers. Accordingly, *Mespyla* or *Mespula*, (see above, page

here cautioned not to be misled by the 38th note of Mr. Spelman, in Lib. III. respecting the *Parthians*.

\* This is the first time of mentioning an open country; and by the distance marched from the *Zabatus*, it agrees with the actual geography, which describes the open country to extend 10 to 15 miles to the southward of Mosul; on the *Assyrian* side.

† For this particular, the reader is referred to the Travels of M. Niebuhr, Vol. 2. The name *Nineveh* is universally applied by the natives, to the site opposite Mosul; which presents the appearance of heaps of ruins, (or rather rubbish) like those of Babylon, through a very considerable extent.

145,) may possibly represent *Nineveh*; although placed at the end of the 3d march, instead of the 5th from the *Zabatus*.\*

It was in this camp, that they devised the means of rectifying certain great inconveniences, arising from their disposition of an *equilateral* square. (Lib. III. c. 21.)

As the text appears to be either corrupted, or deficient, or both, in this place, more was necessary to be said, than could be introduced here, without interrupting the narrative of the retreat, for too long a space. It is therefore reserved till after the end of the retreat; and given in a separate chapter. (No. X.) It may only be necessary to say in this place, that the form of the regular, or *equilateral* square, having been found by experience to be inconvenient, from the difficulty of making its way, even over ordinary ground, with so extended a front; and also from the difficulty of closing up the rear of the square, with sufficient promptitude, so as to exclude the enemy's cavalry, which followed quick at their heels, when forming anew, after coming out of a defile, or close country; a change took place in the disposition and order of march. This seems to have been effected by a conversion of the *regular* into an *oblong* square; and by an arrangement for the more readily closing up the opening in the rear, occasioned by the separa-

\* The word *Mosul* is said to mean a *passage*, like *Thapsacus* and *Dar*. *Mespyla* may possibly have had a reference to the passage over the Tigris, between Nineveh and the *site* of Mosul.

It will probably be allowed that a city of six parasangas in circuit (or a square of  $4\frac{1}{2}$  miles, as *Mespyla* is said to have been, is one of great extent. But ancient Nineveh, is said to have even surpassed Babylon, in that respect: although the latter was a square of at least  $8\frac{1}{2}$  British miles. Might not the *Mespyla* of Xenophon, have been the remains of a *Nineveh*, posterior to the one described as the capital of the Assyrian Empire?

tion of the flanks, on their forming anew. This improvement appears to have been calculated to combine the advantage of such an extent of front, as might be rendered sufficiently secure ; with that which afforded a facility of movement.

The history says, that under their new disposition, they made four marches ; which would include of course the 6th, 7th, 8th, and 9th, marching days from the *Zabatus*. No particulars of any kind, are given, on these four days. It may therefore be inferred, that all was quiet from attack : and that having corrected the errors of their former disposition, and supplied their deficiencies ; the enemy were awed into the measure of keeping at a wary distance, so long as the Greeks continued on ground, where they could act with effect as a phalanx : and where there was no strong ground in the way, for the enemy to post themselves on.

Concerning the general description of the ground, over which they had been retreating for the last five days, there is sufficient information from intelligent modern travellers. The open country, which extends to some distance *below* Mosul, extends also *upwards*, to the foot of certain hills, which the Greeks ascended, early on the *tenth* day (that is, not the 10th day, since they *left* the *Zabatus* ; but the 10th *marching day* : they having made halts by the way),\* and which hills, shut up the plain, at about 40 G. miles above Mosul. The last five marches, therefore, lay through this extensive plain ; which is bounded on one side (the west) by the Tigris ; and on the other, by a ridge of hills, which run parallel, and adjoin to, the *Carduchian* mountains ; of which ridge more will be said presently.

\* It is said to have been the *fifth*, after the change of the disposition. (Lib. III. c. 22.)

Early on the tenth day, then, the Greeks came to a place, where the road lay over *high hills*; and those of considerable extent, as would appear from circumstances. "These *hills*" says Xenophon "*reached down from the mountain, under which there stood a village.*" (Lib. III. c. 22.) From this description, combined with other circumstances, which will presently be made to appear, it may be clearly understood, that the hills in question *projected* from the great ridge of the *Carduchian* mountains; in such a manner, as to shut up the end of the plain, through which they had been marching, the last five days; by stretching across their line of march, to the bank of the Tigris.\* And that it could be no more than a ridge, composed of an inferior order of mountains, projecting from the greater ones, is learnt from the circumstance of the Greeks *crossing it*, and again descending into the plain, beyond it; whilst the greater mountains still continued, on their right (the east).

Before we compare the ancient and modern descriptions of these hills with each other, it will be proper to enter into a comparison of the space that intervenes on the map, founded on the authority of modern travellers; with the distance arising on the marches, performed by the Greeks, since their departure from the *Zabatus*: considering these hills as forming a very important point of recognition in the geography.

Three of the nine marches, which brought the Greeks to the *neighbourhood*, of these hills, have their length given by the historian: the first at 25 stadia, or  $\frac{5}{6}$  of a parasanga; the 3d at 6 paras. (but which appears too long): and the 4th march, at 4 paras; in all somewhat less than 11 parasangas. With

\* See the detail of this route in Map No. III.

respect to the other 6 marches, one would conceive that 4 paras. at a medium, or rather more than 11 British miles, was a sufficient allowance for a body of 12,000 men formed in a hollow square; ordinarily prepared for action; and occasionally engaged in it. Allowance is also to be made for delay, on the score of the sick and wounded men, that were *carried*; and no less on the score of the baggage cattle, contained *within the area* of the square.\* But on the other hand, we may perhaps, calculate upon more than ordinary vigour and exertion, on so animating an occasion, as that, which, in the event of a successful termination, would not only restore to their country and friends, those who took part in the glorious enterprise of THE RETREAT, but confer IMMORTALITY on them and their country. Allowing them, then, to have surpassed the ordinary exertions of mere soldiers, under such circumstances; and to have made 12 miles one day with another, during the 8 marches (for the first can only be reckoned a movement), this rate, under such a disposition must be allowed to be high, when little more than 14 miles, was an ordinary march, at times when neither hostility, nor interruption of any kind occurred. (It is also to be considered, that 5 of these marches, were made, without any interval of halt.) There are then to be reckoned  $34\frac{1}{2}$  parasangas for the eight complete marches; and with the 9th short one, nearly  $35\frac{1}{2}$ ; which brings the account to the end of the 9th march; and if 2 parasangas, or 6 miles be allowed to bring them to the foot of the hills, on the 10th day (as it was *early* on the march); there are to be reckoned in all  $37\frac{1}{2}$  parasangas from the

\* Delay may be inferred from the remarks of Xenophon, on the defects of the square, in retreating before an active and powerful enemy. (Lib. III. c. 21.)

*Zabatus* : which are equal to about 104 British miles *by the road*, or about 80 G. miles in *direct* distance, from the influx of the Zab, to the southern foot of the ridge of hills (which we shall beg leave to name hereafter, the hills of *Zaco*, from a town, or large village, situated on the opposite, or northern side of the ridge.\*)

It is fortunate for the illustration of this critical part of the ground, that certain European gentlemen have gone over it, and noted the character of it. One of these, Mr. John Sullivan, has most obligingly communicated his notes, taken during a journey from Constantinople to Baghdad, in 1781. The observations of the Abbé Sestini, who accompanied him; and who has published an account of the journey (in Italian), have also been referred to. And finally, those of Dr. Howel, who returned from India to Europe, in 1788. These gentlemen severally remark the chain of hills, which obstructs the road between Mosul and Jezirah; not only on the score of delay and inconvenience, but as affording shelter to robbers.

In point of general situation, this chain lies about midway between Mosul and the point of junction of M. *Masius* with the *Carduchian* mountains, where the Tigris issues from the great valley of Diyarbekir; and where, it may be supposed, the river, by tearing away the base of the mountain, has formed the lofty cliffs, which afterwards arrested the progress of the Greeks, along the northern bank of that river.

The town of Jezirah (ibn Omar) situated on the Mesopotamian side of the Tigris, regulates the whole suite of positions,

\* In Strabo, page 745, the *Sacopodes* are synonymous with the *Adiabeni*. By its situation, the present territory of Zaco may have been a province of *Adiabene*; which was comprehended generally between the Tigris and the *Caprus*.

geographically, between Mosul and the abovementioned *defile*, through which the Tigris passes. It is satisfactorily determined, by the reports of Mr. Sullivan and others, as given in the accompanying note, which is extracted from the account of the geographical construction before mentioned. Its general position is  $46\frac{1}{3}$  G. miles to the east, northerly, from Nasebin; 72 to the N. W. of Mosul.\*

The ridge of Zaco took Mr. Sullivan four hours to cross, in a *tahkt rewan*, or litter; and its southern flank, towards Mosul, being about  $17\frac{1}{2}$  hours from Jezirah, 23 from Mosul, may be placed at 41 G. miles from the latter. And as the conflux of the Tigris and Zab, is placed by the construction, 42 below Mosul, the aggregate distance will of course be 83 G. miles: being only 3 miles more than arises on the calculation of the marches of Xenophon.† (See page 151.) Whether we have *under-rated* the marches, or *over-rated* the distance on the construction; it must be allowed that the agreement is

\* Mr. Sullivan and the Abbé Sestini, reckoned Jezirah 22 hours from Nasebin (*Nisibis*), and to the northward of east. Dr. Howel reckoned 19 hours, and Mr. Ives was told 21. Adopting the report of Mr. Sullivan,  $46\frac{1}{3}$  G. miles are allowed.

Between Jezirah and Mosul, Messrs. Sullivan and Sestini reckoned at a mean 39 hours; and Mr. Ives was told, 40. The road being both difficult and circuitous, and the ridge of Zaco also lying in the way, only about 72 G. miles can be allowed: and the intersection of these two lines, places Jezirah in latitude  $37^{\circ} 12' 30''$ ; lon.  $42^{\circ} 1' 20''$ : and in a bearing of E.  $14\frac{1}{2}$  N. from Naesbin.

The mountains of Karadjy-dag, (or *Masius*) according to M. Niebuhr, close on the course of the Tigris, and the greater mountains of Kourdistan; at about 11 G. miles to the N. W. of Jezirah.

† In both these cases regard is to be had to the *bend* of the Tigris, at Mosul: in other words, the line must not be taken *direct*, but *through Mosul*. It may be observed, that the *proportions* of the *direct* distance, differ, on the two portions of  $17\frac{1}{2}$ , and 23 hours. The cause is, that the Zaco hills intervene in the first; and that the road is, on the whole, rougher than in the second portion.

near ; and may to some appear to prove too much : but as the *data* for both, have been exhibited to the reader, he will be enabled to exercise his own judgment, both on the calculation, and on the application of the result.

It will now be proper to extract the several descriptions given, of the ridge of Zaco ; as well as those of the ground in general, between it and Mosul ; as they greatly illustrate this part of the retreat.

The country begins to open, and is generally flat, from about 10 to 15 miles south of Mosul : and continues so, northward, to the aforesaid ridge ; which, as before remarked, is a projection from the *Carduchian* mountains, pointing to the westward, or W. S. W. ; whilst the mountains themselves extend from E. S. E. to W. N. W. ; or nearly parallel to the course of the Tigris : and at 17 or 18 miles distant from the line of the road between Zaco and Mosul. But to the northward of Zaco, they gradually approach the Tigris, until at last, they encroach on it, and form the strait and cliffs, before-mentioned.

But the plain in question, is narrowed to about 12 miles, generally, by ridges of a lower order of mountains (or hills) which run parallel to the *Carduchian*, and are connected, endwise, with those of Zaco : and which approach so near to the Tigris, opposite Mosul, as to reduce the plain to a *slip* of about 4 miles, only. This is the general character of the plain, through which the Greeks had been marching, for the last five days. But from Mosul eastward and south-eastward, it expands to a great extent ; and terminates in the great plain of *Arbela* and *Gaugamela*, the scene of Alexander's warfare with Darius, in ASSYRIA.

Thus it appears, that the country along the Tigris, from a point considerably below Mosul, to the hills of Zaco, is open, and generally flat. Mr. Sullivan, in his way southward, after descending the Zaco ridge, says, "We found ourselves at the entrance of the plain, which extends to Mosul." This is, however, to be understood with some exceptions: for he says, that the ground for some miles short (*i. e.* to the north) of *Tel-Escoff*, is rocky and uneven. *Escoff* itself lies at the *foot* of the inferior ridge. Dr. Howel, to avoid the danger of the direct road, made a circuit from Mosul, and ascended the hills, which he compares to those of *Highgate* and *Hampstead*; the country "broken by frequent ascents and descents."\* And between *Escoff* and *Assee* (at the southern foot of the Zaco hills) "the ground was irregular—we kept close to the hills "on the right" (the north-east). M. Sestini says, that the road was frequently intersected by the beds of torrents, that descend from the hills. And although Dr. Howel found the country broken and irregular, near the foot of the hills, yet Mr. Sullivan found a clear, well-cultivated tract, near the Tigris, between *Escoff* and Mosul. And on the whole, it may be collected, that the tract through which the Greeks marched the five days, previous to their arrival at the Zaco hills, if not answering perfectly to the description of *plain*, was by no means *hilly* or rough.

It is certain that there is no mention made of the Tigris, by Xenophon, from the day of the 3d march, to that of the 14th, when they arrived at the *overhanging* cliffs, which stopped their

\* It must have been on some part of this range of beautiful hills, that the camp of Alexander was formed, before he descended into the field of *Gaugamela*; commonly referred to *Arbela*. *Gaugamela* is now named *Camalis*.

progress. And it is very possible, that until the 12th march, they might never have *seen* it, although their line of march was never very far from it. It is to be concluded, that they were in no want of guides for the great roads, along or near the *general* course of the Tigris; because with attention, they might always be procured, in a well inhabited country. That such roads existed, cannot be doubted, because there are two well-known passes over the Tigris in that quarter; the one at Jezirah (the ancient *Bezabde*), the other, just below the Zaco hills; where Alexander may be supposed to have forded the river, in his way to the field of *Arbela*; as we learn from Arrian. (Lib. III.) See the note to page 63.

We come now, to the modern description of the hills of Zaco.

Dr. Howel came from the same quarter as the Greeks; that is, from the side of Mosul. He says (page 78), "We left Assee\* at day break—after marching 3 miles, we turned suddenly towards the hills, which we crossed by a very rocky and rugged path. These hills produce little else than a few shrubs of an insignificant size, &c. Having gained the plain," &c.†

Mr. Sullivan came from the opposite quarter, and dates his departure from Zaco, in the latter end of June.

He says, "We were this evening to pass a *ridge* of the *Kourdistan* mountains. The way over it, was difficult and dangerous, for *tahkt rewans*. We set out at 5 p. m. and at 9 found ourselves at the entrance of the plain, which extends to Mosul."

\* Apparently the same site with that of the village remarked by Xenophon. (Lib. III. c. 22.)

† That is, the plain on the side towards Jezirah.

The Abbé Sestini, says (page 145, Italian edition), “Leaving Zaco, we directed our march towards the south, across high and steep mountains—in effect, having with much difficulty crossed this whole chain of mountains, which makes a part of those of Kourdistan, we descended into a great plain, having on our right the mountains of Sinjar.” [In *Mesopotamia*.]

These descriptions, although very brief, prove that the ridge of Zaco, shuts up the road, along the Tigris, between Mosul and Jezirah; that it has a base so wide, as to require 4 hours to cross it in a tahkt rewan; that it is lofty, steep, and rocky; and the path, rugged, difficult, and dangerous. And that it is a part of the Kourdistan region, cannot be doubted: because Messrs. Sullivan and Sestini say so in direct terms: and the former, in his journal, describes his leaving the Kourdistan mountains, at 5 miles, only, to the eastward, when at 16 miles to the N. W. of Zaco: and both Dr. Howel and M. Sestini describe the same mountains covered with snow, running parallel to the road between Zaco and Mosul. The reader is requested again to refer to the before mentioned Map, No. III.

Whether the Greeks crossed the ridge by the ordinary road, now in use, or at a point nearer to the great mountains, is of little consequence to the argument: but by the time which they remained on the hills, one might conclude, that it was by the latter; and that they took the first road that offered, in order to escape the enemy's cavalry, as soon as they could.

The history says, “whilst they were on their march, on the 5th day,” [that is, the 5th day since they improved their order of march; but the 10th from the *Zabatus*] “they saw a

“ palace, and many villages lying round it. The road which led  
 “ to this place, lay over high hills that *reached down from the*  
 “ *mountain*, under which there stood a village.\* The Greeks were  
 “ rejoiced to see these hills, and with great reason, the enemy’s  
 “ forces consisting in horse. But after they had left the plain,  
 “ and ascended the first hill, while they were descending from  
 “ thence, in order to climb the next, the *barbarians* appeared,  
 “ and from the eminence showered down upon them, (under  
 “ the scourge) darts, stones, and arrows. They wounded  
 “ many; and had the advantage over the Greek light-armed  
 “ men; forcing them to retire within the body of the heavy-  
 “ armed; so that the slingers and archers were that day en-  
 “ tirely useless, being mixed with those who had the charge  
 “ of the baggage. And when the Greeks, being thus pressed,  
 “ endeavoured to pursue the enemy, as they were heavy-armed  
 “ men, they moved slowly to the top of the mountain, whilst  
 “ the enemy quickly retreated: and when the Greeks retired  
 “ to their main body, the same thing happened to them again.  
 “ They found the same difficulty in passing the second hill;  
 “ so that they determined not to order out the heavy-  
 “ armed men, from the third hill; but instead of that, they  
 “ brought up the targeteers to the top of the mountain, from  
 “ the right of the [oblong]† square. When these were got  
 “ above the enemy, they no longer molested our men in their  
 “ descent, fearing to be cut off from their own body, and that  
 “ we should attack them on both sides. In this manner we  
 “ marched the rest of the day; some in the road upon the

\* The village of Assee appears to occupy the same position at present. See Map No. III. and also Dr. Howel’s remark in page 155.

† This term occurs in the original, but is omitted both by Spelman and Larcher.

“ hills, and others abreast of them upon the mountain, till they  
 “ came to the villages; when they appointed eight surgeons;  
 “ for there were many wounded.” (Lib. III. c. 22.)

The modern descriptions of these hills, which are indeed much too brief for the purpose, do not mention distinct or separate ridges. It is probable that these were nothing more than the broken summits of the main ridge; and that the vallies were neither deep nor wide; for the passing of three hills, together with their intermediate vallies, would have employed more time than the description seems to warrant: but they seem to have taken up no great proportion of the days' march. Moreover, the villages in which they quartered this day, had been *in sight*, before they ascended the hills. It must be understood that the palace and villages stood on the slope of the greater mountains: and that in order to reach them, the inferior chain (of Zaco) must first have been crossed.

The expression, that the Greeks were “ *rejoiced to see the hills,*” because of the enemy's cavalry, seems to shew, that they were the first hills, of any degree of height, or steepness, that they had met with in their route, since they left the *Zabatus*.

In the villages on the mountain, they staid three days; both on account of the wounded, and because they found great plenty of provisions, laid up for the *satrape* of the country. This position must have been situated immediately *over* the present town of Zaco, which stands near the *northern* foot of the ridge denominated from it; as that of Assee\* does at the *southern* foot of the same ridge; and appears to answer decidedly to the village mentioned by Xenophon, which stood under “ the high hills, that reached down from the mountain.”†

\* See Dr. Howel's account, at page 155.

† See above, page 157.

Zaco is the most considerable place that occurs between Mosul and Jezirah; and is surrounded by a fertile district, which produces a great variety of excellent fruits. Hence it agrees with the circumstance of laying in provisions for the satrape: and it may be supposed that Zaco was then, as now, the principal place of the province, which is found in Strabo, under the title of *Sacopodes*. Wine was also found in these villages: perhaps the palm wine before described in *Babylonia*, (page 120): and of which, according to Herodotus, great quantities were brought down the Tigris, from *Armenia*: that is, the quarter above Zaco.

Zaco stands in an island of the river Kurnib, which descends from the Kourdistan mountains; and falls into the Tigris, a few miles below the town. It is ordinarily navigable for Killecks, or floats: of which, many are made here. The Kurnib is a mountain torrent: and at times, contains a great volume of water. It has a fine stone bridge over it. As there is no mention made in the history, of crossing any river between the *Zabatus* and the ascent of the *Carduchian* mountains, it may be supposed that this river, and its adjunct, the Durnah, were both low, at the time the Greeks passed them.

## CHAPTER IX.

THE RETREAT CONTINUED, FROM THE HILLS OF ZACO TO  
THE CARDUCHIAN MOUNTAINS.

---

*The Greeks again attacked, on their descent into the plain—Unmilitary practice of the Persians, of which the Greeks avail themselves, to steal a march—Geographical Discussion, relative to the distance arising on these marches—The enemy dislodged from the eminence which commanded the road, on the 14th March—The Carduchian (or Kourdistan) Mountains close on the bank of the Tigris; and shut up the passage, along it, with an overhanging cliff—Scheme for crossing the Tigris on floats, too hazardous—The Grecian Generals resolve to ascend the Carduchian mountains—Great address displayed, in executing this measure—Ascend, unperceived by the enemy, whilst within their reach—Enter the Carduchian territory, after having struggled with various difficulties, twenty-one days—New hostility with the Carduchians unavoidable—This mountainous region presents an Asylum to the Greeks; and saves them from eventual destruction, by the sword of the enemy.*

**D**ESCENDING again from the hills (of Zaco), the Greeks made only a short march on the morning of the 11th day;

being so closely pursued by the enemy, that they were constrained to halt in the first villages they came to, in the plain; from the number of wounded men, and the loss of the services of those who carried and attended them. Here they availed themselves of the Persian custom of retiring to the distance of about 6 miles, to prevent a surprise in the night,\* to steal a march of about the same length; which not only made up for the loss of distance during the day, but left their pursuers so far behind, (about 12 miles of course,) that they did not appear, during the next two marches; the 12th and 13th.

There is no account given in the history, either of the nature of the country, or of the distance marched, during these two days. It appears clearly, however, that they came down into the *plain* again, on the 11th day: and that *late* on the 14th, or *last day's* march along the Tigris, the enemy were found in possession of the heights in their front. It may reasonably be supposed that Xenophon thought the description of the ground, unimportant, when nothing occurred to render a description necessary; as appears to have been the case, on the two preceding days.

Messrs. Sullivan and Sestini give a good general idea of the ground, between the Zaco hills and Jezirah; which latter, although the extreme limit of their observations, was short of the point, to which the Greeks ascended, along the bank of the Tigris. Nor is there any good modern account of the

\* "The cavalry of a Persian army, are subject to great inconveniences; for their horses are tied, and generally shackled, to prevent them from running away; and if an alarm happens, a Persian has the housing to fix, his horse to bridle, and his cors-let to put on, before he can mount. All these things cannot be done in the night, without great difficulty; particularly if there is an alarm. For this reason they always encamped at a distance from the Greeks." (Lib. III. c. 23.)

ground above Jezirah. All that is known, is, the place where the great chain of Karadjy-Dagh\* (*Masius*) crosses the course of the Tigris, and joins to the Kourdistan (or *Carduchian* mountains): and this we derive from M. Niebuhr, who kept the mountains in view, and had an opportunity of determining in a general way, their line of direction.

It is known from the journals of the before mentioned gentlemen, that the plain extends from Zaco, to the distance of about 9 hours journey upwards, along the course of the Tigris; bounded on the opposite side by the great mountains, which are in this part, named *Jeudi*; answering to the *Carduchian*; and which, approach within 5 or 6 miles of the bank of the Tigris.

Near the northern extremity of this plain, stands the village of Nahrawan;† and soon after the ground rises, and gradually swells into a high mountain; over which the road lies, immediately above the Tigris.‡ But this must not be mistaken for the mountain by which the Greeks ascended finally

\* The Black mountains.

† This village, according to the Mahomedans, is denominated from the Patriarch Noah: and opposite to it, on the high mountains of *Jeudi* (the *Carduchian*), the Mahomedan *derwishes* have erected a small temple, in honour of him. For, according to their idea, the ark rested there. Mr. Sullivan saw the lights, which are kept constantly burning, in the temple. The name *Jeudi* is said to have a reference to the number of persons in the ark.

Since these mountains form a portion of *Armenia*, according to the former division of that country, (for both Herodotus and Moses of *Chorene* include the upper part of the course of the Tigris in *Armenia*) they appear to have at least an equal claim to the title of *ARARAT*, with that celebrated mountain, near Irwân, called *Agri-dagh* by the Mahomedans, *Macis* by the Christian Armenians. For *Ararat* has a reference to *Armenia, at large*; not to a particular mountain.

‡ Mr. Sullivan's Journal.

into the region of the *Carduchians*; because the road *still lies along the bank of the Tigris*, beyond the mountain in question: and it is well known that the Greeks ascended the *Carduchian* mountains, because *they could no longer march along the banks of the Tigris*.

Mr. Sullivan indeed says, that near *Nahrawan*, they had immense rocks of coarse gravel (cemented together), like that, of which the bed of the Tigris is formed, hanging over their heads, and also obstructing the passage, where fallen down. These might at first sight be taken for the overhanging cliffs of the *Carduchian* mountains, which arrested the progress of the Greeks: but the fact just mentioned, contradicts it; and it is certain that the Oriental geographers state, and which is confirmed by Mr. Sullivan, that the mountains of *Jeudi*, are 4 miles within the eastern bank of the Tigris, at *Jezirah*; which place is still 8 or 9 miles *higher* up, than the gravelly cliffs in question; 10 or 11 *below* the place, where *M. Masius* closes on the *Carduchian* mountains, leaving only a passage for the Tigris: which in that place may be supposed to form the impending cliffs, beforementioned.

If the distance marched from the encampment above *Zaco*, to the place where the Greeks were finally impeded, be calculated, it will be found to reach far above the heights described by Mr. Sullivan. For the Greeks, as we have seen, arrived at the *Zaco Hills*, in their way from the southward, *early* on the tenth march: because they afterwards, in the course of the *same day's* march, not only passed over the 3 summits, where they were compelled to fight their way; but marched also, *the rest of the day*, on the hills; and finally, halted in villages, that appear to have been on the slope of the great mountains.

\*

There must then be an allowance of distance, for the *remainder* of the 10th march; for the first part, *to the hills*, has been already fixed at two parasangas only, in the arrangement of the distance, between the *Zabatus* and the *Zaco* hills, in page 150. If 2 more parasangas be allowed for the remainder of the march, this will constitute *a new point of departure*, for the line of distance, northward; at 86 G. miles from the *Zabatus*.\*

The 11th march, even with the addition of the 60 stadia for the stolen march in the evening, would not probably be more than equal to an *ordinary* march, of 5 parasangas; because we are told, that after they had descended from the hills, and Tissaphernes had overtaken them, "they were compelled to halt at the first villages they came to."† The utmost then, probably, has been allowed. The 12th and 13th marches were made, without seeing the enemy; yet from the increased number of the wounded, great delays must have taken place; notwithstanding that one of the marches was through the plain, between *Zaco* and *Nahrawan*; the other, although on the heights above the latter, yet was not over a difficult road. Perhaps, 9 parasangas for the 2 days, or between 12 and 13 miles *per* day, may be sufficient; and then, the encampment of the 12th, would fall on the heights of *Nahrawan*; and that of the 13th, nearly opposite to the site of *Jezirah*. But on the 14th, (or *last march, along the Tigris*) considering the difficulties they had to encounter, in respect both of the enemy, and

\* See pages 151, 152, where 80 to 83 are allowed to the foot of the *Zaco* ridge.

† "Some being wounded, some employed in carrying them, and others employed in carrying the arms of the latter, great numbers were not in a condition to fight. But when they were encamped, the Greeks had greatly the advantage," &c. (Lib. III. c. 23.)

the nature of the country, 4 parasangas, or a little more than 11 miles, may be sufficient.

The account will then give 18 parasangas, or about 50 British miles, by the trace of the road, from the station on the hills, over Zaco, to the highest point, to which the Greeks ascended, along the Tigris. And these, reduced to direct distance, will be  $38\frac{1}{2}$  G. miles; which will reach to a point 9 miles above Jezirah: whilst M. Niebuhr, describes the meeting of the ridges of Karadjy-Dagh and Jeudi (i. e. *Masius* and the *Carduchian* mountains), to be much in the same *general* position: that is, about 11 miles above Jezirah.\* And it may be concluded, that the place where “*exceeding high mountains*” hung over the *river*, and completely impeded the passage along the bank of the Tigris, could be no other than where it forces a passage between the above chains of mountains.†

It would, however, have been more satisfactory to have followed some modern traveller, in his journal to this strait, than to be necessitated to adopt the position, on the foundation of a distant view: but it may nevertheless be conceived, that the near coincidence of the position given, with that assumed from the history, contains much internal evidence of the truth of both.

But even if this point, be given up, the hills of Zaco must be allowed to approach as nearly as possible to a positive proof

\* Here follows a statement of the distances from the *Zabatus* to the *ascent*.

Total		123 G. Miles.

† Lib. IV. at the beginning.

of the position of the Ten Thousand, *at that period* of their retreat. And as the remainder of their march, along the Tigris, was no more than about 40 G. miles, in direct distance, there is no great latitude for error, at any rate: and whether M. Niebuhr's position be admitted, or not, *that* of the Ten Thousand, at the time of their ascending the mountains, may be regarded as a near approximation, in the construction of this species of geography.

Having thus brought the Greeks, *geographically*, to the foot of the *Carduchian* mountains, it will be proper to add some remarks on their proceedings by the way: and also on occasion of their ascending those mountains, in the presence of a vast host of enemies.

It was late on the fourth day's march from the Zaco hills (making the 14th from the *Zabatus*), when the Greeks found a large body of the enemy in possession of certain heights, which commanded the road, in their front; (as we have observed in page 161); they having passed the Greeks in the night.\* Tissaphernes, at the same time, appeared in sight with the main body; threatening their rear. Much generalship, gallantry, and exertion, were employed in dispossessing the enemy, by a detachment led by Xenophon in person: and they finally passed the eminence, which appears to have been another projection, from the greater mountains; and descended into the plain beyond it.† This plain was situated immediately

\* Lib. III. c. 24.

† —“Xenophon observing the top of the mountain, that was above their own army, found there was a passage from that, to the hill, where the enemy was posted.—The enemy, who were upon the hill, the moment they saw them climb the mountain, advanced at the same time, striving to get there before them. Upon this occasion there

below the place where the steep and lofty mountains of the *Carduchians*, close on the bank of the Tigris; effectually barring the passage upwards, and thus preventing their tracing it, till it became fordable.\* Here then they were totally at a stand: the river was found too deep to be forded; and the enemy appeared in force on the opposite bank: no doubt prepared for this circumstance, which *they* had foreseen, though the Greeks could not.

It may be concluded from the subsequent conduct of the enemy, that they never entertained an idea, that the Greeks would be able, or would even attempt, to scale the mountains; but conceived that they were completely entrapped; and that they had only to wait patiently the operation of famine, to make them surrender. It was no doubt to hasten this event, that Tissaphernes attempted to burn the villages, from whence they derived their provisions; the plain having many in it; and those abounding in the necessaries of life.

In this dilemma, a Rhodian proposed to waft 4000 men at a time, across the Tigris, on rafts formed on inflated skins; but this was over-ruled, as, however practicable in itself, it was incompatible with the general safety; the enemy's cavalry being in full possession of the opposite shore.†

was a vast shout raised both by the Greek army, and that of Tissaphernes, each encouraging their own men. At last the Greeks gained the top of the mountain, and prevented the enemy; upon which they fled every one as he could: and the Greeks remained masters of the eminence." (Lib. III. c. 24, 25, and 26.)

\* "The Greeks came to the place where the river Tigris, is, both from its depth and breadth, absolutely impassable: and no road appeared; the craggy mountains of the *Carduchians* hanging over the river." (Lib. IV. at the beginning.)

† This shows a well peopled and flourishing country, if appearances warranted the existence of 2000 domestic animals within reach, around the camp; which the context supposes. (Lib. III. c. 27.)

It is said (in Lib. III. c. 27,) on occasion of the halt of the army, at the place where their progress was arrested by the overhanging cliffs ; that the soldiers *retired to their tents*. But it is said, in the same book (c. 14), that they burned their *carriages* and *tents* ; in consequence of a proposal made by Xenophon (in c. 12) ; who says truly, that “ the tents were troublesome to carry, and of no use either in fighting or in supplying them with provisions ;” whence one may conclude that the word *tents* in this place, meant nothing more than their stations in the camp.

However, M. Larcher supposes, ( Vol. I. p. 241 ) that they only burnt their *superfluous* tents. . But he could not have considered the matter practically. Had tents been in general use (as this idea necessarily supposes), there could not well have been less than 1000, reckoning every description of them. Let it then be considered, what a space, the beasts of burthen requisite to transport them, (admitting that they possessed them) would have taken up, within the hollow square ; where all the baggage must have been placed, in order to its immediate security ; as well as to keep the sides of the square clear for action.

Doubtless, then, they adopted the plan of *bivouacing*, like the armies in Spain and other countries during the late war : and especially since the necessity was so much greater. So that the retiring of the troops to their *tents*, certainly meant only to their station in the *bivouac*.

Had they been possessed of tents, at the time when the *Rhodian* (Lib. III. c. 27) proposed his plan, he would rather have made use of *them*, than have hazarded the chance of being able to catch 2000 animals, and incur the certain labour of

flaying them. For, at *Carmande* (Lib. I. c. 25) the soldiers did actually use the skins of which their tents were made, for the purpose of constructing floats, to cross the *Euphrates*.\*

On an examination of the prisoners, the Greek generals found that it was practicable to pass over the mountains into the territory of the CARDUCHIANS. (Lib. III. c. 28.) This nation, favoured by the natural strength of their country, had preserved their independence, in despite of the power of the great king. They are the ancestors of the modern KOURDS, who have extended themselves along the different ridges and vallies of mount *Taurus*, from Asia Minor to the neighbourhood of Ispahan: and who occupy the country named from themselves, KOURDISTAN.

Unfortunately, from the manner in which the Greeks entered their country, they could only be received as enemies; but it was the only alternative left them: and provided they could force their way through it, they were told that they would soon arrive in the open and plentiful country of Armenia; from whence they might march which way soever they pleased. The certainty of escaping the cavalry of the enemy, was, no doubt, a strong inducement to attempt it.

But to ascend the mountains in the face of so vast a host of enemies, as were now collected together against them, would have been absolutely impracticable, had the enemy been the least aware of what was intended, and had made use of

\* It may be remarked, that at *Cænæ*, at the Tigris, although previous to the destruction of the tents, it is only said that "the barbarians transported necessaries across the river, upon rafts made of skins;" and not that the Greeks crossed over *themselves*, as at *Carmande*. This might well be owing to the different circumstances under which they now were; when every kind of caution might have become necessary.

common precautions, only ; by getting before them, and seizing on commanding situations, from whence stones might be rolled down the steep face of the mountain. In such a case, there had been no mode of dislodging him, by the usual practice of ascending to a higher point, and attacking him from above. The ascending of the mountain, therefore, was a measure which required much delicacy in the execution : and the Greeks appear to have accomplished it, with their usual prudence, and address.

On the day preceding that of the ascent, they had *returned back* from their station near the cliffs, and quartered themselves in some fresh villages.\* The enemy wondered what was intended by this movement, and were at a loss how to act. The Greek generals had not, at that time, examined the prisoners ; nor, of course, determined on their future route ; and as their return, must, from circumstances, have been by a track *more inland*, than that by which they came, it was fortunate that the enemy did not, from the direction of the movement, suspect a design, which the Greeks had not, at that time, even formed. It was thus executed :

From their new position (*i. e.* at the end of the 15th march,) the Greeks decamped, whilst enough of the night remained for them to traverse the plain, and to arrive at the foot of the mountains, unobserved : for on this concealment their existence, probably, depended. They had the good fortune, not only to arrive, unobserved, at the mountain foot ; but even to escape the enemy's observation altogether, whilst it was in their power to annoy them, in ascending it. By this, it may be

\* This movement may be reckoned their 15th march. It must be supposed, from circumstances, to have been very short.

concluded, that the plain was of no great breadth in that part: for they decamped about the last watch of the night, and were got above the enemy, and out of their reach, before they were observed. They, no doubt, took care to point their march across the plain, in such a direction, as not to approach the quarters of the enemy; and as we learn from Xenophon (see above, p. 161, note), that the Persian army, at the approach of night, always retired to some distance in the rear, to prevent surprises, it may be concluded that this very unmilitary custom greatly facilitated the enterprise. It also accounts for their not seeing the enemy, during the ascent. But it shows a total ignorance, or a total disregard of military knowledge, not, at least, to have stationed guards, that might have communicated an account of the motions of the Greeks. It is probable that the passage of the Tigris, was the only part, that was guarded or attended to.

Cheirisophus led the van, which was composed of all the light-armed troops; and Xenophon brought up the rear, with the heavy-armed: because it was expected that the opposition, if any, would be in front: and the light-armed seemed best adapted to the service of repelling such attacks as they were the most exposed to.

The path being narrow, and the mountain lofty and steep, the Greeks employed *the whole day* in the ascent, and in the descent into the villages, situated in the recesses of the summits of the mountains: for it was dark soon after they began to descend. The *Carduchians*, although few in number, from their being taken unawares, attacked the rear of the Greeks with stones and arrows, in their descent, and convinced them of their danger, had they given more warning of their approach,\*

\* Lib. IV. at the beginning.

The *Carduchians* fled from their villages, leaving plenty of provisions for the Greeks ; which they were compelled, from necessity, to use ; but forebore to plunder their houses, in hopes of conciliating them. They, notwithstanding, continued their hostilities : nor could it well be otherwise. A body of 12,000 men, with their attendants, who are either unable to pay for what they take ; or having both the means and the will, yet if unable to establish a friendly intercourse with the natives, must of necessity be compelled to plunder, in order to preserve their existence : and must consequently be regarded as enemies, wheresoever they come. And this would have been the case, in the most fertile and civilized country upon earth ; when food for an additional multitude, is suddenly demanded : but the inconvenience and distress to the natives, must have been much greater, in a poor and thinly inhabited country, like that of the *Carduchians*. So that these people were equally enemies to the Greeks, as to the Persians : to the latter, through hereditary hatred, and dread of conquest, or coercion : and to the former as plunderers ; or for want of a proper explanation in the beginning ; which the necessity of the case, by urging them to a sudden irruption, prevented. And this hatred was probably heightened, by their native ferocity.\*

The choice, if it could so be called, of ascending the mountains, freed the Greeks from the pursuit of their old enemy, the Persians ; who, doubtless, would not have quitted them, whilst their cavalry could act : and as the number of slain and

\* If an explanation could have taken place, it would, no doubt, have been more for the interest of the *Carduchians* to have let the Greeks pass through their country in peace. They would have got rid of them in half the time ; saved the lives of their friends ; and at least half of the provisions ; not to mention acts of violence, and destruction, that might have been prevented.

wounded increased, the Greeks must at last have sunk, through mere weakness. For the losses on the part of the Persians, however great in point of numbers, operated only as a check at the moment; and could with ease be repaired: but the losses of the Greeks, though small in respect of numbers, were of course irreparable: and being continually repeated, must at length, have destroyed them.

The Greeks had made fourteen marches from the *Zabatus*; besides moving their camp on the 15th. In the course of these marches, they were repeatedly compelled to fight their way; and were still oftener harassed, or menaced: they also made 6 halts by the way, in the midst of the enemy: so that they had been 21 days, in a most forlorn situation; struggling with difficulties of every kind. And had the Persians been alert, they might, by sending detachments of cavalry before them, have destroyed all the provisions in the line of march.

As the massacre of the generals is supposed to have taken place about the latter end of October (401 years before Christ) the Greeks would have ascended into this lofty region at the beginning of winter. Mr. Sullivan saw snow lying on these very mountains in the latter end of June.\* The Greeks had no tents† or comforts of any kind, to alleviate the rigours of the season, having destroyed every article that did not administer to their defence, or to the simple calls of nature.

The *Carduchian* mountains, then, in effect, presented an asylum to the Greeks, who could no other way have escaped, at last, the reiterated attacks of such a host of enemies, whose numbers also were augmenting, instead of diminishing. But

\* He got snow at Zaco: so that the inhabitants must have been in the habit of using it.

† See the note to page 142.

as a Persian army could not subsist, or their cavalry act, within the wide range of these mountains; the Greeks, by ascending them, got rid of their dreaded enemy. And although in the mean time, they had to contend with an enemy much more brave and persevering, their numbers were fewer; and they might reasonably expect an earlier escape from them, than from the Persians. Had they known that the Tigris was fordable under the Zaco hills,\* and passed into *Mesopotamia*, they would still have been followed by the Persians: they would also have had the Euphrates to cross; a yet more difficult river, in the line which they must have pursued. Therefore, according to our limited view of things, it appears, that nothing less than such a barrier, as these mountains presented, could have saved the Greeks from eventual destruction, from the attacks of the Persians.

\* Alexander, by the distance at which he passed the Tigris from the field of *Gaugamela* (or *Arbela*) must have forded it near the end of the Zaco ridge. There is a passage at that place, recorded by Hajy-Kalifa. (See again the Map, No. III.)

## CHAPTER X.

CONCERNING THE CHANGE IN THE MILITARY DISPOSITION  
OF THE GREEKS, (Referred to from Chapter VIII.)

---

*Observations on the Change in the Military Disposition, and Order of March, of the retreating army; after the fifth march—Great difficulty in comprehending the entire meaning of Xenophon, respecting this Change; the passage being evidently corrupted—They appear to have changed the equilateral for an oblong square; as affording a greater facility of movement, and greater security to the rear—Concerning the import of the Grecian Military term Lochos, which appears to have been used in different senses, at different periods of time.*

IT has been said, in pages 142 and 147, that the military disposition of the Greeks, on the march, was a hollow *equilateral* square, formed by the heavy-armed troops, or *phalanx*; with the baggage, &c. within it. And that as great inconveniences arose from this disposition, they changed it, after a trial of five days, to an *oblong* square: at the same time, making a new distribution of a certain portion of the troops, in order the better to provide for the safety of the rear. Xenophon thus describes the evils and the remedy.\*

\* Lib. III. c. 24. This passage has been translated by the Author's friend, Dr. Gillies.

“ The form of a regular square now appeared to be a bad arrangement for a retreating army, in presence of an enemy. For when the wings of the square were to be closed, on account of the narrowness of the road; mountains obstructing them on either side; or a bridge to be crossed; the heavy-armed soldiers must of necessity be crowded, and squeezed out of their ranks; and thereby exposed to much danger: as the pressure and confusion would deprive them of the use of their weapons. When emerging from the strait, the wings were to be again expanded; the soldiers that were formerly crowded and pressed together, would of necessity be so far divided, and distracted, as to leave a void between the wings, which could not fail to discourage those nearest to the vacuity, when closely pursued by an enemy. Besides this, in approaching a bridge, or any very narrow defile, it was natural for the men to hasten eagerly, all striving to be amongst the foremost to get over; in which disorderly hurry, they might be assailed at great disadvantage. To obviate these inconveniences, the generals formed six companies of an hundred men each; setting captains over them: and these companies were divided into bands of fifty; and these again into bands of twenty-five: each band with its proper officer. The companies, marching thus appointed, when at any time the wings were to be closed, halted and remained behind; *so that the men in the wings might be no longer liable to compression or disorder.*\* The companies then

\* This passage has also been given from high authority as follows:

—“ so as not to be in the way of the flanks.”

Larcher has,—“ ne portoient point le trouble dans les bataillons, marchant à une certaine distance des ailes.”

But Spelman, “so as not to disorder the rear,” &c. a meaning totally different from the others.

advanced and passed, altogether detached from the wings, and in such an arrangement as to fill up the vacancy left by their expansion: that is, in six bodies of 100 men each, when the vacancy was small; in twelve bodies of 50 each, when larger; and when very large, in twenty-four bodies of 25 each. The same contrivance obviated the danger that occurred in approaching a bridge, or any very narrow passage. For when these were to be crossed, there was no longer any cause for precipitation or hurry; since the companies, dividing themselves, according to local circumstances, passed over in succession; and were thus prepared to be useful in every part of the army, according to the exigency of the moment."

The text here, is, no doubt, corrupted; for this appears to be the universal opinion of all the readers of Greek: and very possibly, mutilated also. It would therefore be vain to seek the entire meaning from the *words* of the passage itself, as it now stands; and consequently, a part of the meaning must be obtained, if at all, from the reason of the thing.

The object in view, appears clearly to have been, the correction of a *faulty disposition*; which exposed them to great inconvenience and some loss: but neither is the cause explained with sufficient clearness, nor is the description of the mode of correcting it, (as it would appear,) free from corruptions. The evil is said to have arisen chiefly from the *equilateral form* of the square, which gave it *too extended a front*; and therefore it appears, they changed it for an *oblong* square, or *parallelogram*. Certain it is, that the disposition *still continued to be a square*; as may be learnt not only from the words of Xenophon (Lib. III. c. 22.) where he employs the term which signifies an *oblong* square, but from circumstances also. For

what purpose, principally, were the new companies formed, but to fill up the voids in the rear of that square? And it appears no less natural, than probable, that the oblong form should have been adopted; as the *equilateral* form, for a body of 10,000 men, presented too wide a front to make its way over ordinary ground: and a like extent of rear, seems to have made it difficult to close it up, *with the requisite dispatch*, whilst forming anew.\*

The inconvenience stated to arise from the compression of the wings, or flanks, into an irregular column, through the occasional straitness of the ground, would have been common to every kind of square. But the evil which Xenophon lays the most stress on, was the difficulty of filling up, promptly, the openings in the rear, made by the separation of the wings, on occasion of forming the square *anew*, after coming out of a defile. For it appears that they were then subject to attacks from the enemy (his cavalry, probably), who broke in and took the flanks *in reverse*; and perhaps attacked the baggage

\* It is worthy of remark, that neither Spelman, nor Larcher, mention the circumstance of the *oblong* square, in their text. Spelman says, "*the right of the square*;" Larcher, simply "*the right flank*:" although the original, (Lib. III. c. 22) has *πλασιον*, or *oblong* square, in contradistinction to *πλασιον ισοπλευρον*, or *equilateral* square, in c. 21. But M. Larcher, in a note on the equilateral square, in this last chapter, (vol. I. p. 225.) gives the Greek terms for both kinds of squares, although he omits the distinction of *oblong*, in its proper place, in the text. (See the distinction in the Tactics of Arrian.)

That the form of a square, although not equilateral, was still preserved, is proved, by Lib. III. c. 22, where the *light troops* are said to have sheltered themselves, *within the body of heavy armed*. Again, they are brought up, *from the right of the square*. And in c. 24, they are taken *from within the square*. All these transactions happened after the change of disposition.

also, which was of course exposed, through the same opening.\* The mischief might probably be occasioned by certain troops of the enemy, who had previously placed themselves in the open country, into which the wings had just *debouched*, from the defile; and were waiting the separation of those wings, to cut in between them.

But here, it may naturally be asked, why the troops which composed the *rear face* of the square, under the old disposition, (and who must be supposed to have marched close to the rear of the wings,) could not have filled up the opening, as fast as it was made; by forming (as well as the wings), as they cleared the mouth of the defile? One cannot well comprehend how the companies, under the *new disposition*, could extricate themselves from a defile, with more celerity than the troops which composed the rear face of the square, under the *old* one: or that, what could have been done by the one, could not have been done by the other, in respect of *filling up a void*. The corps of the army in general were already divided into companies (or into divisions, equivalent to them); otherwise, of course, they would have been unmanageable, both in respect of discipline, and of manœuvres.† Therefore, it can only be supposed, that the newly formed companies (or rather

\* One may suppose the following order of march to have taken place, through defiles, or narrow ground.

First, of course, the *front* of the square, in a column. Next, the baggage, with such a proportion of the light troops, intermixed with it, as might have been deemed necessary for its protection. Then the *wings* or *flanks*, either collectively, in one column; or separately, following each other; as the ground would permit. And lastly, the *rear* of the square, under the *first* disposition: and under the *improved* disposition, the *newly formed companies*; which probably answered the same purpose.

† These permanent companies were of 50 men each. (Lib. I. c. 9; and IV. c. 16.)

*divisions*) must have been in some respects differently constituted from the others; and that a part of the text is wanting, which might have explained it.

That the square, in its original state, was entire; that is, that it *had a rear face*, cannot reasonably be questioned: any more than that it consisted throughout, of *heavy-armed men*. (See Lib. III. c. 13, 20, 21.) For, unless it had been closed up, on every side, it would not have *answered the description* of a hollow square; nor would the army and baggage have been safe, a moment, closely surrounded as they were, by the numerous cavalry of the enemy,

What extent of *front* and *rear*, the *oblong* square might have had, cannot be known. The 600 men of the newly formed companies, cannot be supposed to have been adequate to form a rear face; since a depth of five ranks, is the least that can be reckoned on: for Polybius informs us, that in the order of the Macedonian phalanx, five ranks presented their pikes to the front. The six companies then, would only have given a front of 120 files: too narrow, as well as too weak, to resist the attacks of a powerful enemy; and for a rear closely pressed. So narrow a front, would have rendered their disposition of a *square*, almost nugatory. It has been already supposed (page 143,) that their order was *eight* deep, generally, throughout the square; since their numbers were such as to allow it; and at the same time to allow a sufficient extent to the fronts, and of space within the hollow of the square.

If it be supposed that under the new arrangement, the *oblong* square was formed with a breadth equal to half the length, the front and rear would have had somewhat more

than 200 files in each.\* This may have been the greatest breadth allowed, at any time; and it may have been contracted, as circumstances required. But still, unless the area within, had a considerable degree of breadth, it would not have afforded the space, requisite. It was to contain all the public stores, and private baggage, of the army; the sick and wounded; the followers of both sexes; the spare horses, and probably cattle for slaughter, &c. &c. The beasts of burthen, and cattle alone, must have occupied a very considerable space.† And finally, room must have been left, sufficient to admit the whole of the light-armed troops, on an emergency: and these must have been more than 2000, at that time. The *oblong* square, formed on the above proportions, would have presented a *front* of about 120 yards: but when in motion, would have extended its *flanks* to the length of nearly a quarter of a mile.

If it could be supposed, that there is an error in the *number* of the new companies; and that, instead of *six*, there might have been enough to form a *rear face* of sufficient depth, to the oblong square; a plausible hypothesis might be offered. For, in that case, many doubts would be removed; and in particular, that very perplexing one, respecting the *variation* in the *extent* of the *opening*, left in the rear. For, if it be supposed, that by the new disposition, the wings were only to separate to such an extent, as would suit the ground, on which they

\* Arrian has a specimen of a square of these proportions, in his *Tactics*: With a front of 200 and a depth of 8, *sixteen* companies would have been required, instead of *six*.

† The *Rhodian* who required 2000 skins for floats, appears to have reckoned upon nearly as many *girths* of sumpter horses, to fasten them with. (Lib. III. c. 27.)

were forming, and about to march over, (which to the author appears not improbable,) the extent of the opening, or in other words, that of the rear face of the square, would then vary with circumstances. And it might probably have been the system, according to the idea of Dr. Gillies,\* to dispose the companies in such a way as to fill up the opening, by adapting the depth to the front required; so as to employ the whole force: and which appears to have been necessary; as no part of it could with safety have remained on the outside of the square, whilst closely pursued. And as the *depth* of the companies, so disposed, must necessarily have increased with the *diminution* of their *front*, this may have given occasion to that part of the description, which in its present state, seems to many persons, so much like a paradox.

It is not necessary to suppose, that at the *moment* of filling up the void, *all* the companies should have been formed of an equal depth; but rather that they fell in, in such a way, as to occupy the whole space with the greatest expedition. For, as the extent of front required, might not be known, when they *began* to fill up the *void*; neither, of course, could the depth, which depended on the extent of that front, be known. It is probable that the companies, at the first, fell in, in the columns, in which they had been previously marching: and afterwards extended their fronts, as it became necessary.

It may be concluded with certainty, that their improved disposition was calculated *chiefly* to combine the advantage of such an extent of front, as might be reckoned secure; with that which afforded a facility of movement. And also to provide for the safety of the rear, under particular circumstances.

\* History of Greece, Vol. III. p. 214, Octavo Ed.

But at the same time Xenophon *describes* no other alteration, than that of forming the new companies : (for the change in the *form* of the square, is only mentioned *incidentally* :) and he observes, that after this measure was adopted, there was no longer any confusion of the kind that had before taken place.\*

If then, the Author's supposition be admitted, the newly formed companies (whatsoever their number may have been) are to be regarded as the constituent parts of the *rear face* of the *oblong square*. For, as it is said that "when the wings" were to be *closed*, these companies halted, and remained in "the rear ; so that the men in the wings might be no longer "liable to compression or disorder," it ought of course to be inferred, that at other times they marched *with them* ; by which we should understand that they formed the rear of the square.

A difficulty however occurs, respecting an inconvenience which is stated to have existed under the *old disposition* ; but which was removed by the formation of the new companies. It was, that "when they were approaching a bridge, or any "other strait passage, each soldier would hasten to be amongst "the foremost to get over : "and thus occasion disorder. But that subsequent to the improved disposition, "there was no "longer any cause for precipitation ; since the companies, "divided according to local circumstances, passed in succession." If this refers to the army at large, it is difficult to be understood ; although perfectly intelligible, if it refers to the rear alone.

\* One can hardly account for the omission, in the text, of the circumstance of the change in the form of the square, on any other ground, than that of the passage having been mutilated.

But it must be acknowledged, that the *text*, as it stands, *does seem* to have a reference to the army in general : and accordingly, some highly respectable authorities have supposed, that the evil, arising from the hurry and confusion, described to have prevailed, at the entrance into any narrow passage ; as well as the remedy applied to it ; extended to the army at large. But it does not appear to the author, how any part of the army, except the rear of the wings, or the rear of the square itself, could be exposed to attacks, from an enemy in close pursuit ; any more than how the *army in general* could be benefited by a body of men, whose services appear to have been confined to a particular part of it. Therefore, when it is said that the newly formed companies were always prepared “ to be useful in every part of the army, according to the exigency of the moment,” this could only have been, if at all, during the interval of time, when the square was *compressed* : but surely it appears more probable that the passage is corrupted ; since it involves a contradiction, in respect of the main facts. For let it only be considered, that this body of men had a specific duty to perform, in filling up the voids in the rear : so that their absence, even for a short space, might have been productive of the greatest mischief.

Nor does the narrative describe any Change, but what relates to *the rear of the square* : that is, to the new companies, which were said to have marched in the *rear of the wings*, whenever the square was compressed into a column.

It is possible, that the new companies, subdivided as they were into small bodies, each under the eye of a particular officer, may have been kept in better marching order : and, in consequence, that the pressure and confusion incident to the

hurried march of a large body of troops, on approaching a defile, may have been prevented : but it cannot well be understood to apply to any part, save the rear.

It must be acknowledged, however, that after all the suppositions that have been hazarded, much is still wanting, towards a clear understanding of the subject.

---

*Concerning the Greek Military Term LOCHOS ; and its different Applications.*

Since the term LOCHOS is applied by Xenophon indifferently to a *permanent* company of a battalion, or regiment ; and to a *division* appointed for special services : and as the term is used by other historians, in senses totally different from the former, and also from each other ; it may be proper, in this place, to say a word respecting the modes in which the term has been applied.

It appears to the author, that it has been too much the practice to confound together, the different systems of the PHALANX, which prevailed in different ages : as for instance, the phalanx of the *Lacedæmonians*, at the date of the *Peloponnesian* war ; with the *Macedonian* phalanx of Alexander and of Perseus. For these, although agreeing perfectly in principle, and in general effect, differed considerably in the detail of their establishments ; as in the instance of the *lochos* and *lochagos*, which, in the time of Thucydides, were terms which meant respectively, a battalion, and its commander, or colonel ; but which Arrian applies to a *single file* of the phalanx, and its leader !

The term *lochos* would appear to intend, in its general acceptation, a DIVISION : and to have been applied, at different times, as well to a *division* of an *army*, as of a *battalion* ; and even to that of a *company*. Accordingly, the *lochos* of Thucydides (referring particularly to the date of the battle of *Mantineæ*, 422 B. Christ) is, as we have said, a battalion ;\* that of Xenophon, little more than 20 years afterwards, is a company, or other division of a battalion ; and that of Ælian and Arrian, referring to times, down to 250 years after Xenophon, is a *single file* of sixteen men ; or as many as constituted the depth of their order of battle. Therefore, without entering any further into a comparison of the systems, we may be allowed to consider the *lochos* described by Xenophon, as the one which is alone applicable to the subject of the *Anabasis* ; and regard it, whether *permanent* or *casual*, as a division of a battalion.

According to the manner in which this term is used, on two different occasions in the *Anabasis*, the import of it, is that of a *permanent* division of a battalion, or corps ; formed for the purpose of facilitating the inspection, and for the internal economy and government, of the individuals of it ; agreeing with the modern idea of a *company*.

\* Thucydides (lib. v.) gives the following numbers for the divisions of a *lochos* or *battalion* :

The *lochos* consisted of 512 men ; under a commander (or colonel) styled *lochagos*.

The *lochos* was formed into 4 *pentacosties*, or companies, of 128 men, each under a *pentecontateres*, or captain.

The *pentacosty* consisted of 4 *enomatæ* (or *platoons*) each of 32 men, drawn up 8 deep, and with a front of 4 : the front rank formed of *select* men (similar, perhaps, to the *lochagi* of Arrian). The commanders of these platoons were styled *enomatarechi*.

\*\* One may conclude, from the term applied to the companies, that 50 had been the original strength of a company ; as those of the Romans having been originally of 100 (though afterwards more than doubled) gave the title of *centurion* to the commander.

In lib. I. c. 9; and in IV. c. 16; the term *lochos* must be understood to apply directly to a *permanent* division, into companies; and 50\* is the number given in both places. In the first, Menon is said to have lost *two companies* of his army, amounting to 100 men, heavy armed; in crossing mount *Taurus*. And in the other, at the crossing of the river *Centrites*, the commanders of companies are directed "to divide their companies into two distinct bodies of 25 men each; and to extend "their front, &c."

But the same term *lochos* is also employed in the *Anabasis*, to express certain divisions, formed for special, or occasional services; and without any reference to the permanent distribution, into companies; whose individual strength, as such, might have been insufficient for the purposes intended. There are also *two* occasions, where this occurs.

The first of these is the before-mentioned one of the 6 companies† (Lib. III. c. 21), formed for the security of the rear of the square. And in the other (Lib. IV. c. 44), the whole line of the phalanx was divided into *lochi*, of nearly 100 men each; and formed into *columns*, for the attack of the *Colchian* mountains.

As in the first of the two instances, they are said to have *formed* companies of 100 men each, it must be concluded, of course, that no such description of companies, already existed, as a permanent establishment. And in the latter instance, it may be supposed, that after having decided upon making the

\* Here the companies are again composed of the number, which originally impressed on them the name of *fifties*; although they had previously arisen to 128.

† Or, as many as might have been formed; admitting that the number *six* is a corruption.

attack with separate columns, they threw the line into as many *divisions*, as there were *columns* required; and which would have been determined, necessarily, by the extent of front to be attacked; and the force required to make the desired impression, on the points attacked. Thus it appears, that about 100 was determined to be a proper strength for each column: and this was of course without any reference to their original establishment of companies; although they might possibly have formed each of the new divisions, out of two of the old companies.

Xenophon, then, appears to intend, by *lochi*, certain divisions of a battalion, or corps; whether *permanent*, like our companies, or *casually* formed, for *special services*; in which latter case, they appear to have been formed of the requisite degree of strength, for the occasion; and consequently of arbitrary numbers. The disposition for the attack of the *Colchian* mountains, furnishes an instance of this kind: and it may be remarked, that the strength of the whole column united, being required here, nothing is said respecting a *subdivision* of the companies into *fifties* or *twenty-fives*, for the purpose of extending the front, when necessary; as at the passage of the *Centrites*. And it appears to the author, that the measure of dividing the companies at the *Centrites*, for the purpose of extending the front, throws some faint light on the disposition of the companies; in filling up the voids in the rear of the square.

## CHAPTER XI.

FROM THE ASCENT OF THE CARDUCHIAN MOUNTAINS, TO  
THE DESCENT INTO ARMENIA.

---

*Difficulty of tracing the route of the Greeks, from their uppermost station on the Tigris, to Trebisonde—General Observations on the Geography of their Route—Its direction appears to have been determined by casual circumstances, until they were far advanced into Armenia—The Greek system of Geography at that day, likely to mislead them, in their attempt to reach their Colonies on the Euxine—Remarks on the Geography of their Route across the Carduchian Territory—Pass of Bedlis—Force their way through the Carduchian mountains, by dint of continued exertion and valour—Nature of their Military Disposition and Warfare, totally different from that during the former part of the retreat—Further reduction of the baggage and followers—Bravery and determined obstinacy of the Enemy—Historical particulars relating to the Carduchians—The Greeks descend into the plains of Armenia, and cross (not without difficulty), the river Centrites ; which appears to have been that, which passed by Tigranocerta ; or Seert.*

HAVING now brought the GREEKS within the region of the *Carduchians*, it may not be useless, previous to the attempt to

follow them across it, to enquire concerning their plan of proceeding, in respect of the remaining part of their route : and whether the direction of it, was not dictated as much by necessity, as by judgment and choice.

It is not possible to follow the Ten Thousand, *geographically*, through the whole of their retreat, between the place where they ascended the *Carduchian* mountains, and *Trebisonde* ; in which they employed, in marching only, about 66 days (according to the history), in order to accomplish a distance of less than 300 British miles, in a straight line ; and certainly less than 400, by the road : but then, they wandered during about 3 weeks, between the Euphrates, and the Harpasus rivers, after they had lost their guide.

It appears, however, that to a point, several marches *beyond* the Euphrates,\* they kept nearly to the line of the ordinary road towards Trebisonde ; and that, bating the delay occasioned by the continued warfare in the mountains ; and by the deep snows, newly fallen, near the Euphrates ; their progress was at the ordinary rate of marching. And this includes an interval of more than 20 days ; chiefly during the month of December.

But from the place where the guide left them, they have left no mark to guide us ; as certainly wanting such themselves : no one therefore can undertake to delineate their track ; any more than that of a ship, in which no reckoning has been kept. Although the rivers *Phasis* and *Harpasus* may be recognised, in modern geography, yet the time *said* to be employed in marching between them, and in the neighbourhood

\* That is the Murad, or *eastern* branch, which rises in the quarter of *Bayazid* ; and is the Euphrates of Xenophon.

of the former, appears too great : and nothing more can be collected, than the *general outline* of the tract within which they wandered. Therefore, the time, as well of the reader, as of the geographer, would be unprofitably spent, should it be attempted to describe in detail, the track of the Greeks, after the guide left them. For even if the most exact survey of the ground was procured, the marches could not be traced on it, for want of objects to refer to, from the history : although the rivers and mountains may perhaps assist in forming an idea of the *limits* of the *tract*, within which their wandering was confined.

It may be conceived that the best informed amongst those Greeks, had general ideas of the geography, and outlines of the countries, inclosed between the Mediterranean, Euxine, and Caspian seas : and which must have been somewhat improved by their recent experience. But since the battle of *Cunaxa*, they had been led by so circuitous a route, that before they entered Armenia, it is probable that they could not form any distinct idea of the line of direction, in which any of their colonies on the Euxine, lay.\*

After their arrival in Armenia, there is no direct intimation given, concerning the plan of their route : but as they were told by the guides, before they ascended the mountains, that “ when they should arrive in Armenia, they might, without difficulty, march which way soever they pleased ;” and as after their arrival there, they chose the northern road, it may be

\* It would appear, however, that in a matter which depended on his *own* observation, Xenophon was tolerably exact, when he states the distance of the *Zabatus* from *Ionia*, at about ten thousand stadia ; after they had made a *circuitous* march of more than 19 thousand to the *Zabatus*. (See the note to page 137).

presumed that they had laid aside their plan of going immediately towards *Lydia* and *Ionia*, because the continuation of mount *Taurus* (in that quarter, named *Niphates*, doubtless from its snowy summits;) obstructed their passage; as it runs in a northerly or north-west direction, for nearly a degree. They accordingly struck to the north, through the plains; perhaps because that road offered an easy passage, and a fair prospect of subsistence; objects of the greatest importance at all times; but now in appearance rendered absolutely necessary, from the long continued hardships that they had endured; from the number of wounded and disabled men; and from the near approach of the severe weather, experienced in the country of Armenia.\* And that having been induced by these circumstances to proceed a great way to the northward; and perhaps thinking themselves farther advanced than they really were (which is often the case); they formed the resolution of pushing for the Grecian colonies on the Euxine sea. But no design of this kind, is declared, at the commencement of the retreat: and it was probably adopted after they had crossed the Euphrates, and were arrived amongst a people who had some knowledge of those colonies.†

It is certain, however, that Diodorus says, (lib. xiv.) that having elected new generals, they set out from the *Zabatus* for *Paphlagonia* (meaning probably *Sinope* or *Amisus*, situated in that country). And this may, possibly have been their

\* There is at present a caravan road; and probably there was, at that time, a great road, leading from the quarter of Bedlis, northward, through Armenia. This must have pointed very much in the direction taken by the Greeks.

† The speech of Xenophon at the attack of the *Colcbian* mountains, implies that they had long designed to proceed to Trebisonde; but the phrase is only comparative.

intention; considering it as an intermediate point of rest in their way to *Iönia*: for the *almost immeasurable length of way* from *Assyria* to *Iönia*,\* to men, circumstanced as they were, must have appalled even the Greeks! Diodorus, who evidently had recourse to other materials, besides the *Anabasis*, may perhaps have collected this fact from them.

Nor does the idea collected from Xenophon *contradict* Diodorus. He represents that the Greeks at the commencement of their retreat (from the *Zabatus*), intended to trace the course of the Tigris, upwards, until they came to a fordable part. And it appears to have been equally their intention to arrange their marches, so as to cross the Euphrates (which they probably supposed to consist of a single stream), in the like manner; as the only mode of overcoming the difficulties, presented by those rivers. And perhaps, their return to *Iönia* might afterwards have been facilitated, by taking *Amisus* or *Sinope*, or both of them, in their way.

But the close pursuit of the enemy to the time of their arrival at the foot of the *Carduchian* mountains, confined their attention merely to the objects of *defence* and *subsistence*: otherwise they might, had they been so inclined, have forded the Tigris, as Alexander afterwards did, between Nineveh and the foot of the *Carduchian* mountains. The truth, however, is, that they never thought of crossing the Tigris, until the apparently greater obstacle of the *overhanging* mountains, compelled them to try it, as an alternative. And in that part, as we have seen, it was found too deep. But, as it has been already

\* Taken above (page 137) roundly at about a thousand British miles, from the *Zabatus* to *Ephesus*. And very nearly as much to *Byzantium*.

remarked it would have been the most unsafe course they could have taken.

It may not be improper in this place, to remark, that the geography of the Greeks, at the date of Herodotus, and which may doubtless be applied to the time of Xenophon,\* extended the Euxine very much further to the east, than the truth; at the same time that they reckoned the peninsula of Asia Minor, very much too narrow.† The effect of this would have been, of course, to induce a belief in Xenophon, that the Grecian colonies in question were much more to the *south-east*, than they really were: so that it is not improbable, that he supposed Trebisonde to lie directly to the *north*, when he crossed the Euphrates, although it really lay to the *north-west*.

---

Xenophon reckons in the aggregate, 7 marches through the *Carduchians'* country: but we cannot make out more than 5 marches, and 2 halts. Possibly the space of 7 days was intended to express the whole time of their being within the territory. Diodorus also says, that they passed through the mountains in 7 days. But whether they made 5 or 7 marches, the progress forward, could not be great. "They were continually fighting; and suffered more than from all the attempts of the king and Tissaphernes." (Lib. IV. c. 11.) Add to this, the roughness of the country, and the necessity

\* Scarcely a generation later: both were probably living, at the same time.

† Herodotus reckoned the *Isthmus* to be 5 journies only, across: but it is more than 4 degrees. Eratosthenes allows 3000 stades, which is nearly the truth. Pliny nearly 100 Roman miles too little. Again, Herman Moll was right; and M. D'Anville erred about a degree on the same side with Herodotus.

of often halting, to defend themselves by the way : besides, under such circumstances, they would regard the *quality* of the road, more than its absolute line of *direction*, when closely pressed ; and this would also have the effect of lessening their progress forwards.

It must moreover, be recollected, that the Greeks *traced back* a small portion of their route, near the Tigris, on the 15th day ; when they were about to ascend the mountain. This will also operate to reduce the line of distance, between their uppermost station on the Tigris, and the river *Centrites*, the northern boundary of the Carduchians' territory. And it is probable, that, when all the above allowances and deductions, are made, that the line of distance from the station on the Tigris, to the *Centrites*, short as it may appear, was not more than 28 G. miles, direct. The line of direction was probably north-eastward ; both because it was the shortest line by which they could reach the plains of Armenia ; and that it also leads through a valley, which seems to answer to one described by Cartwright, in the quarter of Cochakan ; and which lies in that direction.\*

According to the geographical construction, they must have descended the mountains, about midway between Sered or Seert (taken for *Tigranocerta*) and Bedlis ; in which quarter, the two ridges of *Taurus*, named *Niphates* and *Masius*, by their junction, form a very wide belt of mountains, generally named from their inhabitants, the *Kourds*, who are the descendants of

\* See Cartwright's, or the *Preacher's* Travels, in Purchas's Collection of Voyages ; Vol. II. This is the line of the caravan route, between Diyarbekir and Tabriz ; *crossing* that of the Ten Thousand.

The valley and town spoken of by Xenophon, occurs in Lib. IV. c. 10.

the *Carduchians* of antiquity. A description of the tract is given by Cartwright, and also by Taverniere; both of whom travelled through it, from west to east, in the line between Seert and Bedlis: as the Greeks appear to have done from south-west to north-east, intermediately between those places. It contains many fertile and beautiful vallies; and some of the mountain sides, are extremely well wooded. No mention is made of snow, by Xenophon: although at the end of November. Mr. Sullivan saw it on the *summits* fronting the Tigris, in June; but it was probably confined to the summits: and it appears that the first snow noticed by Xenophon, fell in the plains of Armenia, about 9 days after the Greeks had left the mountains.\*

The passes leading through this region, from *Mesopotamia* into *Armenia*, are so difficult of access, and so easily defended, that the chief of Bedlis, a large town, situated at the opening of the strongest of the passes, in the road from Diyarbekir to Wan and Tabriz, derives much consequence from his local situation, in the eyes of the Porte.

The march of the Greeks through this mountainous territory, presents a scene of continued labour, exertion, and valour. It is probable, however, that it is often passed over by that class of readers, who attend most to those parts of history, in which brilliant actions, comprised in short descriptions, are not likely to fatigue the attention. The march in question affords a variety of military stratagems, and displays much character. And although as a history, it *appears* to be little more than a narrative of the manner of passing the summits of mountains; and to have much of sameness in it; yet, if it

\* Heavy rain fell, during their passage over the mountains. Lib. IV. c. 7.

be analyzed, much variety will be found, in the different modes of getting possession of them : as well as in that of forcing their way through the difficult passages, generally. Many of these are well worth the attention and remembrance of military men ; and it is not the least to say of them, that they were thought worthy of being recorded by Xenophon.

We cannot help comparing the laborious and hazardous interval spent by the Greeks in the Carduchian mountains, with the state of Captain Cook, and his crew, in the *Endeavour*, whilst engaged in the intricate, and imminently dangerous navigation, amongst the reefs and shallows of New Holland. These long continued perils, are feelingly spoken of, by that GREAT NAVIGATOR, at their conclusion : but it is to be feared that very many, if not most, readers, turn over those leaves, without attending to their contents : chiefly, because a want of knowledge of sea affairs, renders them incapable of estimating the degree of danger, fatigue, and anxiety, that prevailed, during an interval of six weeks.\*

When the Greeks had ascended into the Carduchian territory, they soon found that their future order of march, must necessarily be the very reverse of that, which in the open country below, had, so successfully, resisted the rapid and sudden attacks of the Persian cavalry. In the narrow passages of the mountains, they could no longer concentrate, either their military force, or their baggage. The paucity, and dispersed state of the inhabitants, rendered provisions scarce, and even that scanty supply, became precarious ; because the inhabitants dwelt in situations difficult of access. The nature of the country also converted the roads into passes ; and the

\* See Captain Cook's Voyage, in Dr. Hawkesworth's Collection, Vol. II.

summits of the mountains into citadels; which commanded the ascent on both sides, by the simple operation of rolling down stones. In every sense then, it was a war of posts. Nor were the enemy formidable only, through their natural defences; their arrows of two cubits length, discharged from bows of nearly 3 cubits; and in which operation the left foot had a principal share, pierced the shields and corslets of the Greeks: and, in one instance, completely transfixed a man's head.

The first object of the Greek generals, was to reduce the baggage, and the attendants on the army.\* After this, they forced their way, either by sending detachments by circuitous ways, to surprise and dispossess the enemy of the *passes* and *summits*, or by open attack. In every instance they were successful; but the enemy were often nimble enough to return to the summit, in time to disturb the rear, in their descent. It was fortunate, that they were not more numerous. The *Cretan* bowmen were of the greatest service, here, although they had been less regarded in the plains, against the Persian cavalry, who were enabled to choose their distance.

Xenophon sums up the history of their warfare in these mountains, in the following manner. They were then arrived at the end of the Carduchian's territory. (Lib. IV. c. 11).

“ This day they staid in the villages situated above the

\* Although at the commencement of the retreat, they had reduced the baggage to a scale of mere necessity, as it respected their personal habits and œconomy; yet, the nature of the country, here, requiring a closer order of march; and the difficulty of obtaining provisions, inducing the necessity of lessening the consumption of them; the number of sumpter horses was reduced, and all the slaves recently taken were dismissed. By this arrangement another advantage was likewise gained: for the men who had the charge of them, now augmented the number of the combatants.

“ plain, that extends to the river *Centrites*.—Here they staid  
 “ with great satisfaction, having plenty of provisions: and  
 “ often calling to mind the difficulties they had undergone :  
 “ for during the 7 days, they had marched through the coun-  
 “ try of the *Carduchians*, they were continually fighting, and  
 “ suffered more than from all the attempts of the king and  
 “ Tissaphernes. Looking upon themselves, therefore, as  
 “ freed from these hardships, they rested with pleasure. But  
 “ as soon as it was day, they saw a body of horse, on the  
 “ other side of the river, completely armed, and ready to op-  
 “ pose their passage; and *above* the horse, another of foot,  
 “ drawn up, upon an eminence, to hinder them from pene-  
 “ trating into *Armenia*.” This accordingly was a fresh source  
 of disquiet; for on descending to the river side, (6 or 7 stadia  
 only, from the mountains,) it was found too deep to be con-  
 veniently forded, in the line of the road; and the *Carduchians*  
 were collecting in great numbers, on the eminence which the  
 Greeks had quitted.

The next day, however, a convenient ford was discovered :  
 and having, with great address, baffled all the attempts of the  
 enemy, on both sides of the river, they passed it, with very  
 little damage. And having crossed the valley through which  
 it flowed, and ascended the eminence beyond it,\* they came  
 into the plains of *Armenia*: in which, for a considerable inter-  
 val, they marched forward, relieved both from hostility, and

\* It appears, therefore, that there was a ridge of hills, or rather *rise*, beyond the *Centrites*, which flowed through a valley adjacent to the foot of the *Carduchian* mountains: moreover, that the summit of the *rise*, was the commencement of the plains of *Armenia*; and the valley, most probably worn down from the level of those plains, by the river.

great bodily fatigue; and accommodated with provisions in abundance. What a change of circumstances!

Although they were again entered into the dominions of the great king, yet they had now, only the proper force of Armenia, opposed to them: the nature and extent of the mountainous tract, which they had just quitted, effectually preventing the Persian army from penetrating it.

Xenophon gives the following historical fact, concerning the *Carduchians*, on the report of the Persian prisoners.

“That they were a warlike nation, and not subject to the king [of Persia]: and that once, the king’s army, consisting of 120,000 men, penetrated into their country; from whence not one of them returned; the roads being hardly passable.” (Book III. at the end.)

Plutarch informs us that Artaxerxes, (the same, against whom the expedition of Cyrus was undertaken) afterwards marched into the country of the *Carduchians*, at the head of a vast army of horse: and that this army had, in all probability, perished through famine, had not Teribazus, governor of Armenia, procured a peace.

It is an error to suppose that the posterity of these *Carduchians*, were the *PARTHIANS* who subverted the throne of the *SELEUCIDÆ*; and who defeated Crassus. The Parthians came from the province of that name, beyond the Caspian sea; and established a dynasty in Persia, at large. And those who defeated Crassus, were *PERSIANS*, under the government of that *PARTHIAN* dynasty. The practice of shooting arrows backwards in retreating, was as much Persian as Parthian; as we learn from the *Anabasis* (Lib. III. c. 15); although very commonly referred to the Parthians alone; perhaps,

because it was so fatally experienced by the Roman army, under Crassus.

It appears highly probable that the *Centrites* of Xenophon is the same with that, described by Hajy Kalifa, and other oriental geographers, as the river of Bedlis; as originating from, or passing very near to, that place, which has been so much celebrated on the score of its *pass*. (See above, page 196.) Hajy Kalifa conducts the river of Bedlis through the plain, to the southward of Seert, Sard, or Sered (the ancient *Tigranocerta*) situated within the great valley of Diyarbekir. It is by no means certain, however, that the river of Bedlis, is also the river of *Tigranocerta*, anciently called the *Nicephorius*; but that it passes through the plain, to the southward of it; for another, but smaller river, is said, by the same authority, to join the river of Bedlis, in that quarter; as will presently appear.

Again Hajy Kalifa says, that the river of Bedlis passes near *Kala Zerke*, situated also *in the plain*. Here then we obtain for certain, a point in the general course of this river, below the mountains: for *Zerke* occurs in a caravan route of M. Taverniere, at the distance of one stage to the eastward of Seert; (which is easily recognised in the Ziarat of that traveller :) and at a like distance to the westward of *Cochacan*, taken above, (page 195,) for the town and valley, in which the Greeks found themselves so much at their ease, when they had nearly accomplished their passage through Kourdistan. *Zerke* was also three caravan stages short of Bedlis itself. So that the river of Bedlis certainly passes at one caravan journey eastward from Seert; having then freed itself from the *Carduchian* mountains; and proceeding still more to the

west, or south-west, advances to the neighbourhood of Seert, and is there joined by a smaller river, which may possibly be that of *Tigranocerta*; as the *Nicephorius* seems to have been too easily forded by the army of Lucullus, to answer to the *Centrites*.

It appears then, that the river of Bedlis certainly penetrates the great body of the *Carduchian* mountains: as also, that it appears to be the same with the *Centrites* or *Kentrites*, of Xenophon. And although it may at first sight, appear improbable that so small a body of water, should sap so vast a mass of mountains; yet the fact is, that although the Greeks descended from those mountains, to the river, the descent towards Armenia is small, compared with the ascent from the side of *Mesopotamia*: and this may at once be understood by the circumstances of the case. The whole descent, that is, the whole length of the *slope*, was only 6 or 7 stadia: whereas the Greeks employed a whole day in the ascent; probably equal to 10 or 12 times the length of the other. Consequently the level of Armenia, must be very greatly elevated above that of *Mesopotamia*; and of course, the river of Bedlis must run on a very considerable declivity, to the Tigris.

The *Centrites* was said to be 200 feet in breadth. M. D'Anville supposed the river Khabour (of Armenia) to be the *Centrites*; but Hajy Kalifa says, that the Khabour flows by Zaco: so that this latter answers to the Kurnib of Sestini, which comes from Amadieh in Kourdistan; and is perfectly distinct from the river of Bedlis.

## CHAPTER XII.

FROM THE CARDUCHIAN MOUNTAINS, TO THE VILLAGES OF  
SHELTER AND REFRESHMENT, BEYOND THE EUPHRATES.

---

*The TEN THOUSAND proceed northward through western Armenia, a beautiful Tract—Arrive at a point beyond the head of the Tigris—Geography of the Route, between the Centrites and the Euphrates—Cross the Teleboas, the Arsanius of Lucullus; a beautiful stream—Arrive at the first villages of refreshment, south of the Euphrates; supposed to be Yezidkoi—First snow of the winter—Petty warfare with the Satrape of Armenia—Enquiry into the position of the source of the Murad, or Eastern Euphrates—The Greeks ford it, in the district of the Chaoi, taken for Khanoos—Arrive at the second villages of refreshment, to the north of the Euphrates—Dreadful sufferings of the Grecian army, from cold and privations—Their lives preserved, by the shelter and food, afforded by these villages—Armenian winter houses described.*

FROM the *Centrites*, it appears that the Greeks marched *northwards*: and in 3 marches, according to Xenophon, they were advanced “above the head of the Tigris.”\* But the river

\* The reader is again referred to the Map No. II. for the geography of the retreat, after ascending the *Carducbian* mountains.

intended in this place, is not the one which either the Romans or the moderns, have regarded as the proper Tigris: for this springs from a place very far to the westward of the city of Diyarbekir; and so near to the course of the Euphrates of Xenophon (that is, the Murad) that *two* marches would have carried them from the one to the other; whereas, they made no less than *ten*, from the station in question: not to mention that the *Teleboas* river lay between. That head of the Tigris meant by Xenophon, was probably the remote eastern one, named Arzen, by the oriental geographers. Xenophon spoke of the only Tigris known to him: and which was perhaps pointed out to him, because that having got *beyond* it, the Greeks might, if they had been so inclined, have directed their course more to the west. And hence it had become an object of enquiry, and of attention, to them.\* And for a like reason, the eastern branch alone, of the Euphrates (the Murad) was known to them.

On crossing the *Centrites* the Greeks were said to have entered the *western part of Armenia*; described to be a country of "plains, intermixed with hills of an easy ascent." And this description seems to apply to the whole tract, till within 3 marches of the Euphrates: that is, an extent of ten marches from the *Centrites*. At this point, a chain of hills, or a lower order of mountains, occurred; in which was a pass, through which the road led; and where Teribazus, the Satrape of the country, took post, in order to oppose the passage of the

\* No branch whatsoever of the Tigris could, at this time, have interfered with their route, which lay very wide of that river. But perhaps, their thoughts had been so long bent on the measure of passing over the Tigris, to the westward; that the idea still occupied their minds, although the state of things was totally changed.

Greeks.\* However, he was himself surprised and defeated; such was the close intelligence and active vigilance of the Greeks: and this was the only hostility that occurred, from the time of their leaving the Carduchian territory, to their encountering the united forces of the *Chaldæans*, (or *Chalybians*,) *Taöchians*, and *Phasians*, at two marches beyond the river called *Phasis*, by Xenophon; but truly the upper part of the *Araxes*.

From the pass just mentioned, to the Euphrates, in distance 3 marches, the country was said to be a desert; but was then covered with snow: and beyond the river, (*i. e.* to the northward) plains, also covered with snow, the length of 3 other marches: after which, a fourth, through a hilly or mountainous tract, brought them to the villages, where they found such ample means of refreshment: and whose position forms the term of the present head of enquiry. So that the whole tract, from the mountains of the Carduchians, to a point four marches north of the Euphrates, 17 marches in all, was, with very few exceptions, "a plain, interspersed with hills of an "easy ascent." But this plain is exceedingly elevated above those of *Mesopotamia* and *Assyria*; as is the whole country of *Armenia* and its adjacencies: for, as it has been before remarked, the ascent of *Taurus*,† from the south, is out of all proportion greater, than the descent to the plain of Armenia, on the north. Accordingly, the great body of land, constituting the *two Armenias*, according to the ancient division,‡

\* This too, was after he had made an amicable treaty with them (Lib. iv. c. 19.)

† Called in that part, the *Carduchian* mountains; and farther to the north-west, *Niphates*.

‡ That is, *Armenia major*, on the east of the Euphrates, or *Frat*, above *Taurus*;

may be regarded as an upper level, or kind of *table-land*; from whence the rivers descend in every direction: and on the northern side of which *table*, the *Moschi* and *Sanni* mountains, form a steep descent towards the Black sea.

We shall now enquire, from these *data*, and other notices, and circumstances, into the probable situation of the ford of the Euphrates, where the Greeks crossed it; as well as into that of the villages of refreshment, both to the *north* and *south* of it.

When the Greeks enquired of the country-people, at the southern foot of the *Carduchian* mountains, concerning the roads; they were told amongst other particulars, that the road over the mountains, to the north, led to the *Carduchians*; and that beyond these people, was *Armenia*, a spacious and plentiful country; "from whence they might march which way soever they pleased." (Lib. III. at the end.)

After their arrival in *Armenia*, nothing is said respecting their line of direction, until they had crossed the Euphrates; when it is said, that the last day's march was very grievous, because "*the north wind blew full in their faces*:" (Lib. iv. c. 23.) As no good reason can be assigned, why their course should have been otherwise, at this point of their progress, than at any intermediate point, since they entered the open country; one may infer, that they had proceeded *north*, or much *northerly*, the whole way from the *Centrites*. This is all that can be collected from the history: but there are other circumstances, which render it probable that they went north, or very much northerly. One is, the position of mount

*Armenia minor*, on the west. The *western Armenia* of Xenophon, was, however, included in the greater *Armenia*.

*Niphates*, which interposed between them and the line of direction towards Asia Minor: and another, that the river, to which they came in 6 marches from the *Centrites*; and which they named *Teleboas*; answers to the *Aksou*, or white river, in M. Delisle's map of Armenia; whose line of direction being northerly, and nearly in the meridian of the pass of the *Centrites*, would necessarily be intersected or skirted by the line of march.\* And lastly, that the fine plains of western Armenia, answer to those of Moosh (*Moxoene*) described by Abulfeda and Sherefeddin, as occupying a great part of the space between Moosh and Aklāt: so that it may be conceived that the Greeks marched nearly in the midst, between the mountains of Moosh (*Niphates*) and the lake of Wan; on whose western shore Aklāt is situated. And had they marched in the *neighbourhood* of such a range of snowy mountains as those of Moosh, it is probable that Xenophon would have mentioned them.† Upon the whole, then, it appears highly probable that

\* Xenophon says that the *Teleboas*, "though not large, was beautiful, and had many fine villages on its banks: this country was called the western part of Armenia." (Lib. iv. c. 19.)

This river answers to the *Arsanius* of Plutarch; to which Lucullus came, on the fourth march from the northern foot of *Taurus*; called in that part, the *Carducian* mountains. This river is also the *Arsinius* of Procopius, or a branch of it: for he only knew the northern, or Erzerum, branch, as the Euphrates; as Xenophon only knew the eastern one. Lucullus was at this time on his way from *Tigranocerta* towards *Artaxata*. Here he gained a decisive battle over Tigranes: but the near approach of an Armenian winter, made him relinquish his design of marching northwards.

There is no contradiction arising from the different lengths of the marches of Xenophon, and Lucullus, from the foot of *Taurus*, to the river in question; although both might have set off from the same point: the route of the one being north, the other north-east, would intersect the river in different places, and at very unequal distances from the point of outset

† Sherefeddin, in his history of Timur, relates that immediately to the westward of

the course was generally northward ; or perhaps inclining rather to the *west* : for it may be supposed, that as they had guides in this part of their way (as we are told Lib. iv. c. 23), they would naturally be conducted on some great road, that led towards the nearest parts of the Black sea ; which bore to the west of north from them.\*

The distance given on this northerly line, from the river *Centrites* to the villages of refreshment, lying to the NORTH of the Euphrates, and which necessarily includes the ford of that river, and the villages of refreshment to the SOUTH of it), is as follows :

From the *Centrites* to the *Teleboas* was six marches ; and three more to the villages of refreshment, *south* of the Euphrates, where they had the first snow. Thence to the pass where Teribazus was defeated, one *short* march ; and 3 more to the ford of the Euphrates : in all 13 marches from the *Centrites* to the *Euphrates* ; and four more to the villages of refreshment beyond, or to the north of it. In all 17.

The 9 marches which brought them to the *first* villages of refreshment ; and where the first snow fell, are given at 5 parasangas each ; equal to 45 parasangas ; and the 4 remaining ones, to the Euphrates, for which no distance is given, being through a deep snow, *newly fallen*, must of necessity,

Moosh, there were very high mountains, covered with snow, in the spring season : and that Timur in crossing them, lost many of his beasts of burthen, through the cold. Moosh is 4 journies to the N. E. by E. of Diyarbekir ; three west of Aklat ; the fine plain of Moosh lying between.

\* It appears by the travels of *Père Avril*, at the latter end of the 17th century, that there was a *caravan road*, between Bedlis and Erzerum : but no particulars are given, on an occasion where they are so much called for. It is merely said, that the journey was 8 or 10 days, in performing. He doubtless went by way of Yezidkoi, and Khanoos.

have been *very short*; as we are afterwards told that the horses sunk up to their bellies.\* One of the marches was, moreover, rather an *excursion* than a *march*; for it was no farther than they had previously ventured to go, from their camp, in order to surprise Teribazus; and to which camp they had returned the same day. It seems, therefore, that if 2 parasangas be taken, for the excursion to the pass, and  $7\frac{1}{2}$  for the other 3 days, through the snow, it may be deemed sufficient: and then the 13 days will give  $54\frac{1}{2}$  parasangas: equal to nearly 117 G. miles, in *direct* distance, between the *Centrites* and the Euphrates.

Before we endeavour to apply this line of distance, to the geography, it will be proper to lay before the reader, as much of the account of the geographical construction, relating to the place of the source, and future line of course of the Euphrates, (meaning the Murad, or *eastern* branch, which is the Euphrates of Xenophon)† as will enable him to judge for himself, how far the statement of the positions, on which the argument turns, deserves credit. It must, in the first instance, be assumed, that the surrounding positions of Diyarbekir, Jezirah, Moosh, Wan, Malazkerd, Bayazid, and Erzerum, are all placed upon the best authorities that could be obtained. The reader is again referred to the map No. II.

The source of the Murad was once thought to be *near*

\* The head man of the village north of the Euphrates, taught them to tie *bags* to the feet of the horses: without them, the horses sunk up to their bellies, in the newly fallen snow; which they measured, and found to be six feet deep. Lib. IV. c. 28.

† It seems scarcely necessary to remark that the Euphrates crossed by Xenophon at *Tbapsacus*, in Syria, is formed of the joint waters of the one in question, (*i. e.* the Murad) and those of the Erzerum, or western branch (the Frat); the conflux taking place previous to the passage of the Euphrates, through *Anti-Taurus*.

Bayazid ; but is now said to be at a place, 30 miles or more, farther to the westward. It was pointed out to Mr. James Morier, when at Diadin, at about 10 miles to the south-west of that place. However, it is certain that Hajy Kalifa says, that " the Murad, which has its fountain head in *Aladag* ( the " mountains of *Ala* ) traverses the plain of Bayazid." And this circumstance is added—" That in the same plain, the Murad is swallowed up ; and issues out again at the distance of four hours travelling."\*

The mountains of *Ala* form a lofty ridge, which extends from west to east, between the source of the river Arash (*Araxes*), near Erzerum, and mount Ararat ;† and which appears to *terminate* in the latter. On the south, *Ala* detaches a parallel ridge ; and thus forms a spacious valley, of about an hundred miles in length ; in the eastern quarter of which, the town of Bayazid is situated. The source of the Murad, pointed out to Mr. Morier, springs from the southern side of this valley : so that either the *southern* ridge is to be regarded as a *member* of *Ala* ; or there are other sources nearer to Bayazid ; (as H. Kalifa says that there are several springs). Certain it is, however, that Mr. Morier crossed no stream, whatsoever, in his way westward from Bayazid ; the Murad at the same time flowing in the like direction, along the valley, and skirting his route on the left.

But as Bayazid contains an extensive district ; in which a part at least, of the above valley is known to be included ; (or it may be the greater part) ; may not the source near Diadin,

\* Hajy Kalifa's Geography of Armenia, translated by M. Hammer, of Vienna.

† That is, the mountain of that name near Irwân ; but called *Macis* by the Armenians ; *Agri-dagb*, by the Turks.

which certainly flows through the valley in question, be the fountain head of the Murad, intended by H. Kalifa ?

This source appears to be the one spoken of by Pliny, (Lib. v. c. 24), on the report of Corbulo ; as springing from the mountain of *Aba*, in the province of *Caranitis*, in Armenia. The name *Aba* or *Abi*, is said to be still known in Armenia : possibly the *Haboudja* of M. Delisle may have some relation to it.

The Murad is also the Euphrates of Strabo (page 521). So that the ancients, generally, applied the name of the *confluent* stream, to the eastern branch, as the natives do *Frat* (probably the origin of Euphrates) to the western. It may be supposed that Xenophon gave to the Greeks, the first distinct notices, concerning the general position and course of the Murad ; to which he naturally gave the name of Euphrates ; and was followed by the ancient geographers in general.

Pliny says that the Euphrates only takes that name, after having passed through the mountains : being previously named *Omiras*. He seems to have heard indistinctly, concerning the *Murad*, *Arsanius*, and other rivers, which flow into the Euphrates, or its branches : but it may be understood, that he did not consider the *Omiras* (Murad ?) so much a branch, as the main river itself, under a different name. The *Arsanius* has been already spoken of, as the *Teleboas* of Xenophon, in the note to page 207 : but it appears probable to the author, that through the great want of knowledge that had so long prevailed, concerning the subject of the upper branches of the Euphrates, and the countries through which they take their courses ; that the name *Arsanius* has been very differently applied, by different persons amongst the ancients. But a

discussion of the subject, would not only be too long; but out of place, here.

From Diadin, the Murad takes a general westerly course, through the valley above-mentioned; by Utchkilisse, Alishgherd, and Turpakala: Mr. Morier's route, keeping either to its bank, or to its neighbourhood, during an extent of 60 or 70 miles: thus ascertaining to a moral certainty, that its course is such, as to agree with the march of Xenophon; which requires that it should have kept to a high northern parallel, from its source, to the place where he crossed it: and which must have been after it had pierced the southern ridge of Ala-dagh, in its way to the west.\*

From thence, its general course bends more to the S. W. and even to the south; so as to enter the great plain of Moosh: for this is its description, in the Armenian geography of Hajy Kalifa. It is, moreover, confirmed in this part also, by the map of M. Delisle, and by the report which Mr. Morier heard of it. It receives, by the way, several considerable streams, one of which is the Aksou, or *Teleboas*, before commemorated (page 207); and another, the Karasou, which joins it in the plain of Moosh.†

Hajy Kalifa describes very particularly, the town and province (or Sanjigat) of *Khanoos*, situated to the south-east of Erzerum, at the distance of three journies. It occurs also in a route given by M. Niebuhr, from Erzerum to Wan, under the name of *Kanis*; at the distance of 20 hours travelling, from the former: and south-easterly, of course; as pointing

\* M. D'Anville describes its course very differently: but M. Delisle's delineation agrees with Mr. Morier's report.

† Hajy Kalifa's Geography of Armenia. *Karasou* means the *Black* river.

towards the head of the lake of Wan. Ibrahim Effendi, also, in his map of Persia, &c. has *Kanis*, with the river of Murad near it. And to complete the information respecting this particular, Mr. Morier was informed that the Murad, after quitting the neighbourhood of Turpakala, passed through a province of the name of *Kensus*. One may readily conclude that there was an error, either in collecting the name, or in writing it down; and that *Khanoos* or *Kenus* was intended.

Here then is a satisfactory proof, not only that the province of Khanoos exists, in this general situation; but that the Murad, by its general course, must pass through it.

Now Diodorus, who (as we have before remarked,) evidently made use of other materials besides the *Anabasis*, attributed to Xenophon, says, that the Greeks, in their retreat, passed through the countries of the *Chaoi* and *Phasiani*; and afterwards traversed what was called the country of the *Chalcidians*. It is proper to state, that he omits the Euphrates, altogether; having, apparently, confounded it with the *Phasis* (or rather the *Araxes*). For he says, that from the *Phasis*, they passed through the countries of the *Chaoi* and *Phasiani* to that of the *Chalcidians*.\* Since then the districts of Khanoos (or *Kanis*) and *Passin* border on each other, at this day,† it appears probable that they represent the *Chaoi* and *Phasiani* of ancient times. And as the Euphrates of Xenophon (the *Murad*) really passes through, or by, the province of Khanoos, as

\* Diodorus, Lib. XIV. 29. He has transposed the order of time, in which some of the events and transactions, took place; as well as the geographical positions of places: as may be seen by a comparison of his history with the *Anabasis*; and indeed, with the reason of the thing. By *Cbaltidians*, he must be supposed to mean *Chaldeans*.

† Hajy Kalifa's Description of Armenia.

appears to have been satisfactorily shown, by combining the different notices derived from M. Delisle, Mr. Morier, and Hajy Kalifa; as well as those contained in the chart of Ibrahim Effendi, and the route given by M. Niebuhr; it can hardly be doubted, that the Ten Thousand really crossed the Murad, either within that province, or near its boundary. The northerly direction of their march, and the distance given, accord with this idea; for there are measured on the geographical construction (See Map No. II.) 103 or 104 G. miles, between the *Centrites* and the Murad, on that general course: and 117 is the result of the marches: taking the first 9, at Xenophon's statement of 5 parasangas each.\* But then, we have here calculated, as if the line of the road was generally straight; and as it might well have happened otherwise, a part of the difference, ( $13\frac{1}{2}$  miles) may be owing to *that*; and perhaps the remainder of it, to an erroneous construction of the Geography, and an over-rating of the original distance; which Xenophon is apt to do. (For it may be observed, that after crossing the Euphrates, *five* parasangas are allowed for each of the three marches, through a deep snow, newly fallen; that is the same rate, as when they were marching over a naked plain.)†

This arrangement, then, appears on the whole, to be satisfactory: and thus an important point in the retreat is established. For M. D'Anville and M. Larcher place the ford of the Euphrates, a degree and a half to the eastward of Khanoos: and for this, no other reason appears, than because Xenophon says "it was *not far* from its source." But this could only be

\* See above, page 208.

† Perhaps, however, an error of Editors or Copyists.

speaking comparatively : for by Mr. Morier's route, the ford could not be less than 90 or 100 G. miles from that source near Diadin. For the Greeks are said to have marched through plains, for several days ; and, as it appears, in a northerly direction, both in their approach to the Euphrates, and after leaving it ; which they could not have done at a point higher up, because its course is there shut up, by chains of mountains.\*

The ford of the Euphrates, thus approximated, is upwards of 60 miles to the S. E. by E. of Erzerum ; and was said to be *navel deep*.

Before we proceed to the villages of refreshment, *north* of the Euphrates, it may be proper to say a word respecting a circumstance, which adds strength to the above opinion, concerning the line of direction northwards.

Certain villages of refreshment, at nine marches from the Centrites, have been mentioned ; where the Greeks halted 3 days, including the attack of the pass, and of Terribazus' camp. Xenophon says (Lib. IV. c. 20.) " They came to a *palace*, " surrounded with *many* villages, abounding in all sorts of " provisions." And it is also said, that some of the villages were " at a distance from one another."† In a country where villages do not often occur, (for villages are only mentioned 3 times in the course of the 9 days) ; so many of them lying together, and those so well provided, may be considered as a position of some note. Now in the map of M. Delisle, before

\* As the Murad is fordable at Palou, near its conflux with the Frat, it is not at all necessary to go high up in search of a ford.

† These are probably to be considered as *hamlets*, forming, collectively, one town or jurisdiction. Other groupings or clusters, appear in the course of the march through Armenia.

quoted, as having furnished so much important matter, in the quarter, there occurs, in a position answering to the villages just mentioned (taken in respect of the crossing place of the Euphrates), the village of the *Jesidians* or *Yezidians*; (i. e., *Manichæans*); and in M. Niebuhr's route, before quoted, it appears also, under the name of *Yezid-koi*, which means the same thing. It is given at 19 leagues to the S. E. of Khanoos; 17 to the N. W. of Malazkerd: all being on the same road, leading from Erzerum to Wan. Here then is a second point of agreement: and the result shews, that the line upon which the Greeks marched through Armenia, was very much *north-erly*: for the presumptive proof of the identity of Yezidkoi, with the *first villages of refreshment*, is certainly strong.

Taking the ford of the Euphrates, as a new point of departure, the next consideration, is, the length of the 4 marches from thence to the *second villages of refreshment*, which lay to the north of the Euphrates: and whose position forms the term of the present head of enquiry.

These four marches were made through a *deep snow*, recently fallen; and which was in one place no less than *six feet* in depth.\* All of them, of course, must have been very short; and the two last, remarkably so. It is mentioned, that on the 3d day, the *north wind blew full in their faces*, and that the march was very grievous; so that 30 soldiers, besides many slaves and horses, died of cold and hunger. And but for their arrival at the villages which sheltered them, on the 4th day, few could have escaped: for when they slept, they were often covered up in snow.

\* See Lib. IV. c. 23, where Xenophon accounts for the manner in which they ascertained it.

Xenophon allows no less than 5 parasangas, or about 14 B. miles each, for the first three of these marches, *through a deep snow*. But this is probably an error in the copying: for in the first place, 5 parasangas formed an *ordinary* march, on *clear ground*: and where horses sunk up to their bellies, what proportion of an ordinary march, could be accomplished? probably 22 miles may be sufficient for the whole; or 16 to 17 G. miles in direct distance. The course must be considered to be northerly; or north, somewhat west; from the ford of the Euphrates, to the villages in question. These, therefore, are placed on the geographical construction, at nearly E. S. E. 50 or more geographic miles from Erzerum; and at 18 to 20 to the southward of the river Arash, or *Araxes*.\* Hence, the position would be sought for, about midway between the towns of Khanoos and Deli-baba; and on the skirts of the mountains of *Ala*: for they were amongst hills,† on the 4th day: although the 3 first, from the Euphrates, were through a plain, and northwards.‡ Such is the general position of the *second* and *principal* cluster of villages of refreshment; and which might be truly styled the villages of PRESERVATION; considering the actual state of the Grecian army. For it may be remarked, that the comfortable quarters, and good cheer, which they met with here, though, as too often happens, abused by the possessors, was the most critical and opportune, possible: since a very few more such marches, and nights, as they

\* This is on the calculation of their having advanced 16 or 17 G. miles to the northward of the crossing place of the Euphrates; and which, added to the 103 or 104 between the Centrites and the Euphrates, (see above, page 214,) gives a total of about 120 from the Centrites: and, reduced to one line of distance, about 143 from their *uppermost station*, on the bank of the Tigris; in a direction, *due north*.

† A valley is mentioned, Lib. IV. c. 23.

‡ See again the Map No. II.

had lately experienced, would have ruined both their constitutions, and their discipline.\*

It cannot have escaped the reader of the *Anabasis*, that, in the conversation between Xenophon and the chief of the village, the latter said, that the horses, of which they found a considerable number there, "were bred for the king of Persia, as a tribute." And also, "that the horses of that country, were smaller than those of Persia, but had a great deal more spirit." (Lib. IV. c. 28.)

Now Hajy Kalifa, in his description of the province of Khanoos, in Armenia, says, "Khanoos is famous for its *jailahs*, "or summer quarters, in the mountains of *Bingeul*, *Sooshehr*, "and *Sherefedin* (meaning *pasturages*, on the hills, when the plains were burnt up.) Its horses are famous for their swiftness. It contributes (to government) 400 horsemen."

This, no doubt, strengthens the idea of the identity of Khanoos, with the *quarter* in which the Greeks were sheltered and refreshed. The position of the *town* of Khanoos itself, does not suit the *northern course*, through Armenia: it seems also to be too far from the *Chaldaeans* or *Chalybians*, who are said, Lib. IV. c. 28, to inhabit the *neighbouring* country: and who appear to have been seated in the plains now called Chalderan, between the rivers Arash and Harpasou (*Araxes* and *Harpasus*).

No habitations are mentioned, between the two places of

\* Diodorus speaks of their sufferings, in the following manner: (Lib. xiv.)

—"Not being able to endure so grievous a march, every man was compelled to remain, in the place, in which the storm found him. And though all were in extreme want, yet they patiently endured, that whole night and day, the extreme cold—so that they could take no rest."—"Every man had perished, had they not found some small villages where there were provisions in plenty."

refreshment, on the different sides of the Euphrates ; although at least 4 or 5 good marches apart. It has been remarked above (page 215,) that villages very seldom occurred in the way from the *Carduchians* to Yezidkoi, and then in clusters : so that it appears to have been the mode of living in the country ; but which proves it to have been thinly peopled. In the instances of the two sets of villages of refreshment, we find clusters of small villages or hamlets, forming one community : and some of them so far distant from each other, that the troops quartered in them, were thought to be too widely dispersed. (Lib. IV. c. 20.)

At the latter of these places, which was situated in the most elevated part of Armenia, the habitations (at least the winter ones), were singularly constructed.

“ Their houses (says Xenophon) were under ground, the mouth resembling that of a well ; but spacious below : there was an entrance dug for the cattle, but the inhabitants descended by ladders. In these houses were goats, sheep, cows, and fowls ; with their young. All the cattle were maintained within doors, with fodder.” (Lib. IV. c. 26.)

Tavernier, who crossed this part of Armenia in a caravan, saw at Halicarcara, a town calculated to be within 20 miles of Xenophon's station, and to the north-east of it, habitations of the very same kind. He says “ they are made under ground like caves.” He says also, that the snow was so deep, that they could not travel during 8 days. This was in March : Xenophon's arrival there, was after the middle of December.\*

\* The elevated part of western Asia, must be excessively cold, from the circumstance mentioned by Della Valle, of his ink freezing in a room at Hamadan (*Ecbatana*) which is below the parallel of 35°.

In Kamschatka, the winter habitations are precisely like those in Armenia; but there are also summer houses. (See Capt. Cook's last voyage, vol. 3.)

The Greeks staid in these villages 8 days; at the end of which time, they again set forth in the snow: but of course refreshed and heartened at the expense of the unfortunate inhabitants.\* The head man of the village which had been occupied by Xenophon's party, was their principal guide: but no intimation is given, concerning their intended route. However, they probably had, at this time, determined to go to *Trapezus* or Trebisonde, which being much less than 200 B. miles by the road, must certainly have been known by report to the more intelligent part of the people of the villages: or at least, they could not but have known in what quarter the Black sea, was situated.

\* The extravagance, waste, and thoughtlessness of an army, or any other set of men, in *free quarters*, is shewn, by Xenophon's description of what passed on this occasion. Their previous sufferings may perhaps be thought to plead in excuse for *them*; more especially as they considered themselves in an enemy's country. (Anab. Lib. IV. c. 27.)

"The soldiers rested that night in their several quarters, in the midst of plenty."—  
 "The next day Xenophon went to *Cheirisophus*, and, in every village through which he passed, made a visit to those who were quartered there; and found them every where feasting and rejoicing. They all would force him to sit down to dinner with them; and he every where found the tables covered with lamb, kid, pork, veal and fowls; with plenty of bread, some made of wheat, and some of barley. When any one had a mind to drink to his friend, he took him to the jar, where he was obliged to stoop, and sucking, drink like an ox." (This is explained by what went before (c. 26): "There was beer in jars, in which the malt itself floated even with the brims of the vessels; and with it reeds, some large and others small, without joints. These, when any one was thirsty, he was to take into his mouth, and suck.")

"When they came to Cheirisophus, they found them also feasting, and crowned with garlands made of hay; and Armenian boys, in barbarian dresses, waiting on them. To these they signified by signs, what they would have them do, as if they had been deaf."

\* \* \* The opinion of Ptolemy respecting the upper part of the Euphrates, was by accident, omitted in its place, page 211.

He describes both of its branches, the *Frat* and the *Murad* ; but applies the name of Euphrates, to the former ; or the branch from Erzerum. His delineation has a coarse resemblance to the truth : but he derived advantages from the discoveries and improvements made by the Romans, posterior to the times of Strabo and Pliny. He describes in the course of the branch, which answers to the *Murad*, a great bend to the north ; like that in the quarter of Khanoos. (See the Map No. II.)

## CHAPTER XIII.

FROM THE VILLAGES OF SHELTER AND REFRESHMENT, BEYOND (i. e. to the north of) THE EUPHRATES, TO THE RIVER HARPASUS.

---

*The Greeks depart for Trebisonde\*—The guide deserts them, in the midst of the deep snow—They wander during twenty-one days; chiefly between the rivers Phasis and Harpasus—Geographical discussions and remarks—The Harpasou a well-known river, from Georgia—The Phasis not the river of Colchis; but the Araxes; flowing through the country of the Phasians—The Taöchians, the present Tahoskari—The Chalybians (or rather Chaldæans) the people of Chalderan—The city of Gymnias taken for the present town named by different travellers Comasour, Coumbas, and Kumakie; situated on the river Arash, or Araxes—The above points, if admitted, fix the general limits of the space, through which the Greeks wandered.*

THE Greeks left their quarters of refreshment and repose, under the guidance of the chief of the village, which had fallen to the lot of Xenophon to quarter in; (its inhabitants for

\* Although it is not declared, that such was their precise destination, yet that alone can be understood. For when they were preparing to attack the *Colchian* mountains, Xenophon, in his speech to the army, observes, (Lib. IV. c. 44) that the enemy before them “are the only remaining obstacle, that hinders them from being already in *the place*, “whither they were long since hastening.” They were then within three marches of Trebisonde.

want of warning, having had no opportunity of escaping, like the rest, when the Greeks arrived). The son of the guide, "a youth in the flower of his age," accompanied them, as a hostage for the good behaviour of his father.

After three day's march through the snow, without meeting with any villages, Cheirisophus grew angry with the guide, on a supposition that he had purposely avoided them; and struck him: upon which, being at large, he made his escape in the night, leaving the youth behind him.\*

The author is of opinion, contrary to the usually received one, that the guide may well be exculpated from any design to mislead. In the first place, it was surely his interest to lead the strangers out of his own neighbourhood as speedily as possible. And if the state of the country was such, *beyond* his village, as on *the way to it*, there ought to be nothing extraordinary, in meeting with no villages, in the course of 3 very *short* marches (necessarily short because of the deep snow), when none are mentioned, in the course of the preceding 8 marches, of the same kind: nor had they slept under cover during all that time.

Thus the impatience and indiscretion of Cheirisophus, in first punishing, and afterwards (whether the guide was in fault or otherwise,) allowing him to be at large, plunged the Greeks into a scene of confusion and distress. That Cheirisophus was blameable, is to be inferred from Xenophon's disapprobation of his conduct, alone: but all must condemn him, on the strength of their own judgment. But who is wise at all times? And the guide, by abandoning his son, a promis-

\* Cheirisophus having charge of the van, whilst Xenophon himself brought up the rear, the guide would of course be consigned to the care of the former.

ing youth, to the mercy of hostile strangers, is yet more censurable. The terms in which Xenophon mentions the manner of disposing of this youth; together with his commiseration of the soldiers, when lying in the snow; and his active and affectionate attention to their wants; exhibit his merit as a man of feeling, in as favourable a light, as his public conduct does that of his political and military character.\*

It has been said, that it would be vain to attempt to trace the Greeks, after they had *lost themselves*; as appears to have been actually the case, from the time the guide left them, to their arrival at the river *Harpasus*; from whence they appear to have suddenly turned back, and are next found at the city of *Gymnias*; where they procured guides, who promised to conduct them to a place, from whence they might *view the sea*. But we shall, notwithstanding, beg leave to offer our conjectures on the situation and general extent of the tract, through which they wandered: and shall solicit the reader's patience, whilst we attempt to engage his attention to what can be offered on a subject, which has so much divided the opinions of geographers.

\* It appears (Lib. IV. c. 29) that the youth was confided to the charge of Episthenes of *Amphipolis*. The same Episthenes had been previously spoken of, as having distinguished himself, at the head of the Targeteers, at the battle of *Cunaxa*. (Lib. I. c. 45.)

There is also an Episthenes, said to be an *Olyntbian*, mentioned in a less respectable manner, in Lib. VII. c. 36. Now unless it be a misconception of the *index-makers*, both Spelman and Larcher have supposed these circumstances to relate to the same person. Certain it is, however, that Xenophon speaks of an Episthenes of *Amphipolis*; and another of *Olyntbus*. And one would be loth to suppose that Xenophon intended the same person, when he speaks of the disposal of the youth; with him in the VIIth book: not but that we must condemn the levity with which he speaks, in the latter place,

On the presumption that the guide had been directing them towards Trebisonde, the point at which he deserted them, may be supposed to have been at about 36 G. miles to the eastward of Erzerum; 8 to the S. E. of the bridge of *Kobankupri* (over the river Arash). From this place, after an interval of 21 days, they found themselves at the river *Harpasus*: and on the 29th came to *Gymnias*; from which place, they made 10 or 11 more to Trebisonde. And it is possible that *Gymnias* was not more than 10 or 12 miles, from the place where the guide left them.\*

It is morally impossible to trace their route to the *Harpasus*; but from it to *Gymnias* and Trebisonde, does not appear very difficult; provided certain positions are admitted. These are, 1. The river *Harpasus*, and the station of the Greeks on its banks. 2. The *Phasis*, according to Xenophon; but in fact, the *Araxes* of Armenia: and the district of the *Phasians*, through which it flowed. 3. The country of the *Taochians*. 4. That of the *Chalybians* of Xenophon; or rather *Chaldæans*. And, 5. The city of *Gymnias* or *Gumnias*.

First, of the *Harpasus*, as forming the supposed eastern limit of the tract, through which the Greeks wandered.

This river then is most evidently recognised in the Harpa-sou, or Harpa river,† being the northern branch of the Arash, or *Araxes*.

M. Tournefort, to whom, on the score of his instructive and entertaining Travels, the public are indebted for the illustration of the geography of this quarter of Armenia; gives the most

\* See again the Map No. II.

† *Sou*, or *Soo*, signifies *River* in the Turkish language; and is equally applied to the *Mæander*, in the west, and the *Euphrates* in the east.

clear and positive information respecting this river; which he crossed twice; once in his way from Kars to Teflis; and a second time, on his return from Irwân to Kars and Erzerum. In the first instance, he crossed it not far from its source, which is situated in the mountains that form the south-western frontier of Georgia, or Gurgistan. The second crossing was much lower down, and not far from its place of conflux with the Arash (the *Phasis* river of Xenophon). It was now a considerable stream: for it had received the river of Kars, and another from the Balakez lake, in the intermediate space. But it was still fordable; although the ford was deep and dangerous: and had nearly proved fatal to M. Tournefort. It formed the boundary between the countries of Turkey and Persia.\*

Xenophon says nothing more concerning it, than that it was 4 plethra, or 400 feet in breadth; which agrees with Diodorus, and appears probable, from the description of it by Tournefort. The ford was near Ani, a ruined fortress, mentioned in the history of Timur.

The new Russian map describes its course, together with those of its adjunct streams: so that on the whole, the information respecting it, is very clear and satisfactory.

That it should preserve its ancient name so completely, is no matter of surprise; when it is considered, that not only most of the considerable rivers of this region have preserved their's,† but also a considerable proportion of the towns.

\* Hajy Kalifa informs us, that the Harpa-sou river is crossed, in the way from Kars to Irwân; at 16 hours to the eastward of the former.

† As Kur, (*Cyrus*); Arash, (*Araxes*); Faz, or Fash, (*Phasis*); Alazan, (*Alazan*); Aragua, (*Aragus*); Frat (*Euphrates*); and Pliny no doubt means the Murad by the *Omiras*.

The Harpa-sou is said to abound with fish, in a greater degree than any other river in that country.

2. The river *Phasis*, and tribe of *Phasiani*. Hajy Kalifa, in his description of Armenia, mentions the "district of *Passin*, " which contains, amongst other places, Hassan-kala, half a " day's journey from Erzerum."\* As Hassan-kala is so well known from M. Tournefort's description, and drawing of it; and from Mr. Morier; one cannot be at a loss where to place the province of *Passin*: that is, immediately to the eastward of Erzerum; and containing the sources of the Arash or *Araxes*. Hajy Kalifa moreover says, that "from the plain of *Passin* " rises a stream which joins the Arash."

M. Tournefort sufficiently points out the source of the Arash itself, which is situated, according to him, on the opposite side of the same mountains, which give rise to the *Frat*, or western Euphrates. And as these mountains lie between Erzerum and Hassan-kala, which are only a day's journey asunder, the source of the Arash, which river passes under Hassan-kala, cannot be mistaken.

The point at which Xenophon crossed the *Phasis*, cannot be placed; because it occurred after they had lost their guide: and perhaps had in the interim, wandered very considerably. But from other quarters it may be well understood, that it is the same river with the Arash; and doubtless obtained its name, in the upper part of its course, from the tribe of the *Phasians*. And it may with equal probability be concluded, that the present district of *Passin*, was the seat of the *Phasiani* of Xenophon.

M. D'Anville (*Geog. Ancien.* vol. II. p. 100,) quotes a

\* It is rather a whole day's journey.

Byzantine author, who says that the name of *Phasiana* is applied to a district, traversed by the Arash river, in the early part of its course. And M. Delisle (*Mém. Acad. Roy. Scien.* 1721) quotes Constantine Porphyrogenetes, who says that the river *Phasis* ran near Theodosiopolis: that it separated *his* empire from *Iberia*: and that it was also named *Erax*. *Theodosiopolis* is universally referred to Hassan-kala; so that the river in question is perfectly distinct from the *Colchian Phasis*; although this passage in Xenophon misled some of the geographers, ancient as well as modern:\* but the *Colchian Phasis* has its sources from *Caucasus*, and its members; very far distant to the north-eastward. And indeed, the sources of the *Phasis* and *Cyrus*, in Ptolemy, ought to change places. (See his *Asiæ*, Tab. 3).

3. The *Taochians*.† The notices respecting the seat of this tribe are not so clear as the former. M. D'Anville (*Geog. Ancien.* vol. II. p. 101) again quotes a Byzantine author to prove that "a district named *Tahoskari*, agrees, in point of "local circumstance, with the place of the *Taochi* in Xenophon." The author's name is not mentioned, so that we

\* Strabo and Dionysius both thought that the *Phasis* (of *Colchis*) had its source in *Armenia*. Doubtless, they were misled by the *Phasis* of Xenophon, which, as we have seen, was denominated merely from the tribe seated on its banks.

But it may be suspected, that Xenophon himself thought the *Araxes* to be the *Phasis* of *Colchis*: for in Lib. V. 33, 34, he seems to connect the *Phasians*, known to him, with the river *Phasis* of *Colchis*: for that river alone can be intended in those places. The *Colchians* of Trebisonde, and the supposed *Phasis*, might easily have misled him.

† M. Delisle, in his Dissertation on the Marches of the Ten Thousand (*Mém. Acad. Roy. Scien.* 1721), says, that *Taochir* is marked as a province in a map of Georgia, made by a Georgian prince. And this is very true; but this *Taochir* is distinct, and very distant from the country of the *Taochi* of Xenophon. But they may have migrated since that time.

are precluded from making a comparison: but the position assigned to the Tahoskari, by M. D'Anville, is much the same as would be given to the *Taochi*, by the context of the history; that is, nearly adjoining, on the N. E. to the *Phasiani*. For the Greeks came to the post occupied by the combined forces of the *Phasiani*, *Taochi*, and *Chalybians*, at the passage of the mountains, in two marches from the river *Phasis*; and as this is said to have been no more than 100 feet wide, or one fourth of the width of the *Harpasus*, the crossing place must have been very high up; since the *Phasis* (in other words the *Arash* or *Araxes*) cannot be regarded as a smaller river than the Harpa-sou, at the place where they meet. Therefore it may with some probability, be concluded, that it was crossed within the *bounds* of the province of Passin: (and perhaps the name *Phasis* was only applied to that part of the river contained *within* it.)\*

How much soever the Greeks may have wandered, between the passage of the *Phasis* and the *Harpasus*, it is incontestible that their general course was north-easterly; or much to the *northward* of *east*; otherwise they could not have reached the Harpa-sou: and the distance being about 150 British miles, including the windings of the road, the 14 marches would average  $10\frac{3}{4}$  nearly, had they made the *shortest cut*, from the supposed crossing place to the conflux of the Harpa-sou and Arash: so that the excess, reckoning by mean marches of about 14 miles each, is only *one-fourth part*.†

\* It is very common in the east, to call a river by the name of the place it passes by; or the country it penetrates; although the river may have a proper and general name. But to obtain *this*, the inquiry must be pointed.

† This seems to shew, that, being without guides, they were proceeding on a *geogra-*

Admitting that they crossed the *Phasis* in the quarter of Koban-kupri, they would then have fallen into the great road,\* from *Arze* (Erzerum) to *Iberia*, by way of Kars, (*Karsi* or *Chorsi*); in which the mountain that so much disquieted M. Tournefort, (on the score of the banditti, lying in wait there for the Caravan), would answer to that, on which the combined tribes took post to oppose the Greeks, at the distance of two marches from the passage of the *Phasis*.† As the mountain described by Xenophon (IV. c. 32) was no more than 60 stadia in length; and having crossed it, they descended immediately into a plain, one cannot reconcile this circumstance to the description of the *main* ridge of mountains of the *Moschi*; but it was probably a projection, or shoulder of that ridge; as the one described by Tournefort really appears to be.

It may readily be conceived that three adjoining tribes, as these are described to be by Xenophon, would have joined their forces, in a situation somewhat central to the whole, when an eligible position occurred in the same quarter, rather than towards the extremity of either; for their mutual convenience: and it really happens, that the supposed situation of the *post* in question, is nearly central to the three districts, according to the assumed positions of the *Phasiani* and *Taochi*; as well as of the position which the *Chalybians* must necessarily have occupied; in order not only to agree with their relative situation to the *Harpasus* river (*within* which, alone, they *pbical system* of their own; which, in all probability, placed Trebisonde very much too far to the east.

\* It was necessary, of course, that they should travel on *a* road, although *that* road might not point *exactly* to the place they wished to arrive at finally.

† See M. Tournefort's Travels, Vol. 3, Letter vii.

ought to be placed); but in conformity to the general tenor of the history. And this leads naturally to the consideration of the next article; that of the *Chalybians*; as they are denominated by Xenophon.

4. The *Chalybians*, or rather *Chaldeans*. It may be proper to remark at the outset, that the name CHALYBIANS, *here*, appears to be a mistake; and that CHALDÆANS are certainly intended. Xenophon indeed passed through a tribe of *Chalybians* on the shore of the Euxine: but then they were denominated from their being *workers in iron*: and doubtless it was a *nick-name* given by the Greeks; (as *Mosynæcians* to the dwellers in wooden fortresses, in another place): and as it is admitted that Xenophon wrote a great deal from memory, it is possible that he sometimes confounded the two together. On one occasion, he actually names *these*, CHALDÆANS:\* although it is certain that in 3 other places, he writes *Chalybians*.

Diodorus (lib. xiv. c. 29,) writes *Chalcidæans*: and it is pretty certain that he had access to other materials, besides the *Anabasis*.† And probably the reader will be of opinion, that the name ought to be written *Chaldæans*.

\* That is, when at *Cotyora*, he was conferring with the Ambassadors from *Stinope* (lib. v. c. 23,). The application cannot be mistaken; because he says "The *Chaldeans* and *Taoebians*, though no subjects of the king," [of Persia] &c. So that he meant the people, whose territories he had passed through, during the 7 days before he came to the *Harpasus*: answering to the plain of Chalderan. Moreover, he speaks next in order, of the *Macronians*: thus shewing that he all along spoke of people who lay to the eastward of Trebisonde; and not of the *Chalybians* on the sea-coast, in the opposite quarter.

† It is not meant that the authority of Diodorus is better than that of Xenophon; but that as errors in writing of proper names easily happen, and are not easily detected; we ought not to slight such kind of information, as is contained in the different modes of writing proper names, by different authors.

This tribe (whom the author will beg leave in future to call *Chaldæans*) was situated *beyond* the *Phasiani* and *Taochi*, and extended to the *Harpasus* river. Seven marches are said to have been made, through their country (so also says Diodorus); so that it must have been extensive. It had many towns, and those fortified: and it appears, from what Xenophon says afterwards, that this tribe (as well as the *Taochians*), was independent of the king of Persia. It may be clearly perceived that they were different from all the other people whom the Greeks had yet encountered; they meeting them in close combat, and effectually preventing them from obtaining any provisions, whilst in their country: so that the Greeks lived upon the cattle which they had previously plundered from the *Taochians*. (Lib. IV. c. 39.)

The *Chaldæans*, then, (or those intended by the *Chalybians*) were seated *within* the *Harpasus*, and *beyond* the river *Phasis*, or *Arash*. The Harpa-sou is admitted to be the *Harpasus*; and the point of distance given, (see page 231) is not so much in excess, as to destroy probability; considering the circumstance of wandering. And to this, may be added, that the distance on their return, from the *Harpasus* to Trebisonde, agrees very well with the construction.

Hence, therefore, it may be concluded, that the extensive plain named CHALDERAN, extending to the Harpa-sou eastward; and along the course of the *Arash*, westward to *Passin*; and north-westward to the reported seats of the *Tahoskari*, represents the tract inhabited by the *Chaldæans* in question.\*

It may be remarked, that the chief man of Xenophon's

\* It would appear from Hajy-Kalifa, as if the plain of Chalderan or Shaldiran, extended eastward to mount Ararat.

village told him, that the *neighbouring* country was inhabited by the *Chalybians* (*Chaldæans* ?) and informed him concerning the road that led to it. According to our idea of the site of the village, the country in question might be 30 to 40 miles to the north-eastward of it.\*

#### 5. The city of *Gymnias*.

Much, respecting the arrangement of this part of the route, depends on the geographical position of this city; and there can hardly be said to be any *authority* for placing it; so that it depends very much on opinion. M. D'Anville in his *Géog. Ancienne*, has placed it on the western Euphrates or Frat; below Erzerum. The objections are, that it is *too near* to M.

\* M. D'Anville places the *Chalybes* (our *Chaldæans*), *Taochi*, and *Scytbini*, together with the city of *Gymnias*, in such relative situations to each other, and to the ford of the Euphrates, that one is obliged to confess, that it is difficult to comprehend his train of ideas, on the subject. In the mode in which he has placed his *Chalybes*, in respect of the site of the villages of refreshment on the north of the Euphrates, it is impossible that they could in any sense be reckoned neighbours to each other; as the chief of the village described them to be.

The tribe of *Chaldæans*, whose description differs so much from that of their neighbours, and who were independent of the great king, may be conceived to have been one of the many northern tribes, who crossed mount Caucasus in quest of settlements in southern Asia. It appears from Xenophon that there were also tribes of *Scytbians* established in the same quarter; whose territories the Greeks passed through, between the river *Harpasus* and M. *Theebes*. Again, it is known that another tribe of *Scytbians* occupied the province of *Sacasena*, situated along the southern bank of the river *Cyrus*, (now *Kur*,) adjoining on the south to Georgia, or Gurgistan; and whose district still preserves the name of *Kasaki*, and its inhabitants a distinct character from that of the surrounding people. This permanency of character may be owing to the nature of the country, which is exceedingly rough and mountainous: whilst it has been lost in the plain of *Cbalderan*. These circumstances altogether, seem to prove, that the northern tribes were continually making irruptions, and establishments, in southern Asia: of which the account of the Scythian invasion in Herodotus (Clio. c. 103, *et seq.*) is a pointed instance.

*Theches* (Teke), and to Trebisonde; and *very much too far* from the Harpasus. His opinion, however, had undergone a great change: for in the map of the Retreat for M. Rollin's Ancient History, it is placed on the Shorak river, (that is the *Apsarus* or *Bathys*) to the eastward of Trebisonde: and it is very remarkable, that in the same map, he places the *Taochi* and *Chalybians* beyond, or to the east of the *Harpasus*, which appears quite contrary to the order of events in the history! In the map to M. Larcher's translation, there is a most astonishing departure from historical fact. The Greeks are carried first to the sea, from the *Harpasus*; and then to *Gymnias*. The map therefore, of course, could not be M. Larcher's own!\* The differences, however, seem to prove the total absence of all kind of authority for the position of *Gymnias*.

Since the matter turns on opinion, the author will merely state his own; without enquiring into the motives which induced others to differ so widely amongst themselves.

A town or large village named by some *Comasour*, and by others, *Coumbas* and *Kumakie*, stands on the northern bank of the river Arash, about 35 miles below its source; and on the eastern border of Passin, or the country of the *Phasiani*. This we conceive may be the site of *Gymnias*: not merely on the resemblance of the roots of the names; but also on the score of its occupying a position, agreeing generally, in point of distance, with that of *Gymnias*, in respect of the river Harpasus, on the one hand; and Trebisonde on the other. For it is about  $91\frac{1}{2}$  G. miles from the nearest part of the Harpa-sou; 118 from Trebisonde. Now the distances given in the history,

\* Yet, on the whole, the map in M. Larcher, is the best that the author has yet seen, of the very many that have appeared of the Expedition and Retreat.

are 8 marches, and 10 marches, respectively; but on examination it will be found, that the latter number should be 11, instead of 10: for the *two* marches given, for the distance between the *Colchian* mountains and Trebisonde, appear to be wrong; *three* coming nearer the truth. For M. Tournefort's distance from Trebisonde to the *foot* of those mountains, was equal to 26 or 27 G. miles *direct*:\* so that the Greek encampment (where the honey was found) which appears to have been near the top of the ascent from the *opposite side*, may well be reckoned three ordinary marches from Trebisonde, or nearly 15 parasangas of Xenophon's scale, instead of the 7 given in the history; and which would not accord with any place of descent from the *Colchian* mountains, in coming from the eastward, to Trebisonde.†

If then 8 marches are taken, (according to the history,) for the distance between *Gymnias* and the place of encampment, on the *Colchian* mountains, these will agree to the distance on the construction; which gives nearly 86 G. miles, between Comasour and the summit of the mountain ascended by M. Tournefort: that is  $10\frac{3}{4}$  for each march; and  $10\frac{1}{2}$  is the received proportion for a *mean* march.

On the other hand the distance between Comasour and the Harpasou, at Ani,  $91\frac{1}{2}$  G. miles, is rather above the mean march, as it gives nearly  $11\frac{1}{2}$  instead of  $10\frac{1}{2}$ : but this is surely no just objection, as the distance may be over-rated on the

\* M. Tournefort (Vol. III. Letter 6,) went two journies of 14 miles each; besides 4 hours of a third, to the foot of the mountains: perhaps 38 British miles; which would give in direct distance, at least 26 or 27 G. miles; and possibly 29.

† Anab. Lib. IV. c. 46.

Diodorus says that they were three days between the villages where they found the honey and Trebisonde; which appears to accord with the ground.

geographical construction, which, in this part, is founded on computed distances alone.

There is still another line of distance that respects Comasour. The Greeks made 5 marches from *Gymnias* to the mountain from whence they first saw the sea; as the guide had promised them; at least it was *on* the 5th march; and near the conclusion of it.\* Now this distance agrees with the *passage* of the mountain, in the ordinary road between Erzerum and Trebisonde;† and which is a continuation of the ridge, on which the castle of *Teke* stands; unquestionably, the *Theches* of Xenophon: "the HOLY mountain of THECHES." Nor does the title of *holy* belong merely to this part of the ridge: for the extremity of it, which forms a very remarkable promontory, at 60 miles to the westward of the castle, was named *Hieron-orus*; and the remains of the name still subsists in *Jorus*, or *Yorus*.

This is what we have to offer, in support of the opinion that *Gymnias* stood on the site of Comasour.

If it be allowed that the above positions, taken generally, are properly adjusted, it follows of course, that the general limits of the space through which the Greeks wandered, between the rivers *Phasis* and *Harpasus*, are also determined: but the distance between the place where the guide left them, and the crossing place of the *Phasis*, which one would suppose to have been small, is given at 7 marches! This appears to be so much out of rule, in every view of the matter, that one may suspect, that the passage is corrupted; but whether or not, it appears impossible to apply it: and it must be given up, accordingly. Diodorus affords no assistance.

\* Lib. IV. c. 41.

† Tournefort, Vol. III. Letter 6th.

## CHAPTER XIV.

FROM THE RIVER HARPASUS, TO TREBISONDE.

---

*Supposed Causes of the long-continued wandering of the Greeks—*

*One of these, perhaps, their system of Geography, which placed their Colonies on the Euxine, very much too far to the eastward in respect of Issus, and Babylon—Probable cause of detecting their error, at the Harpasus—No direct intimation in the history concerning their having wandered at all—Route from the Harpasus by Gymnias, to Trebisonde—Holy Mountain of Theches, now Teke—Valley of Baibort, the seat of the Macro-nians—Affecting scene, on the first view of the sea—Tumulus of stones erected on the spot—Attack of the Colchian mountains—Honey in the Villages ; its violent effects on the soldiers—Arrival and friendly reception of the Greeks, at Trebisonde.*

THE cause of the wandering of the Greeks, was obviously the loss of their guide : and the difficulty of procuring another prolonged it. At that time, they were in an uninhabited tract ; and when they afterwards came to an inhabited part, a guide, if to be obtained at all, was to be hunted down ; because they had no person with them, who by speaking the language of the country, could entice others to come in : and thus keep up

a succession of guides.\* Generally, in the course of their marches, they appear to have had plenty of guides, even in the Carduchian mountains; for whensoever the natives opposed them, there was always a chance of taking prisoners.

When, therefore, they were left to find their way, they could only follow their own ideas of the general geography; or apply the casual, and perhaps imperfect, knowledge, derived from their former guides. And even this, if ever so correct, went no farther than to the *general line of direction*; which often differs from the *detail*.

Their ideas of the general geography, may in a great measure be collected from the systems of the times: that is, for instance, of Herodotus, who immediately preceded Xenophon; or of Eratosthenes, who lived about 200 years after him. It has already been stated, that Herodotus extended the Euxine much too far to the east: but even Eratosthenes, after the improvements made in geography, by the Macedonian conquests, supposed, (according to M. Gosselin) that the mouth of the Phasis (of *Colchis*), lay somewhat to the east of the meridian of Babylon: although in fact Babylon lay three degrees to the eastward of the other!† So that Xenophon, even had he known his true situation, in respect of Babylon, when at the foot of the *Carduchian* mountains, would have erred more than 3 points of the compass, in his estimation of the bearing of Trebisonde; which he would have supposed to

\* This is spoken from the Author's personal experience.

† This is an error that has been gradually reduced; and has only been done away in the present age. As Eratosthenes erred  $3\frac{1}{2}$  degrees; M. Delisle erred 2; and M. D'Anville about  $1\frac{1}{2}$ . The head of the Caspian sea, or at least Astrakan, is two degrees too far to the east, in M. D'Anville's latest maps.

bore about N. by E. but which in truth, bore more westerly than N. N. W. And by the same rule he might have supposed it to bear north-easterly, when the guide left them, although it bore N. W. by W. nearly.\*

Thus, the position in which the Greeks found themselves at the *Harpasus*, which was so very far to the eastward of their intended line, towards Trebisonde; may be in part accounted for, from the error of the geographical system, with which they set out. But it may be supposed, that they also wandered very much in quest of provisions, in the countries of the *Taochians* and *Chaldæans*, where they were the most distressed: but perhaps still more, from the nature of the atmosphere, in an Armenian winter. For M. Tournefort says, that in *June*, there were intervals when they could scarcely see each other, for the thick fogs. The snow storms must have been equally bad, or worse. When therefore, neither sun nor stars could be seen, how could strangers even guess their way?

But it is a very remarkable circumstance, that Xenophon has not said in any place, or given any intimation, that they had wandered: insomuch that a perfect stranger to the geography, would not discover, by the text, either of Xenophon or of Diodorus, that they had ever lost their way! The whole delay, according to the history, compared with the geography, was 29 days; for they were hardly any nearer to Trebisonde when at *Gymnias*, than when the guide deserted them.

At the end of 21 days after that desertion, they are found at the *Harpasus*, (or Harpa-sou of the present times); from which

\* As they continued to advance on the same line, the difference between the *real* and the *supposed* bearing, would, of course, increase.

point, they evidently *retrograded*; having, as may be conceived from this circumstance, discovered their error. And from thence they proceeded, if not *directly* towards Trebisonde, yet perhaps by the nearest convenient route.

Whether the Greeks themselves, discovered their error in respect of the position of the Black sea; or that they received their information from the natives, cannot be known; but it appears probable that they might be told by some of the prisoners, taken amongst the *Chaldæans*, who had found out their destination, that they had left the Black sea *behind them*. For an army that had been marching and countermarching, during three weeks, within the space of 150 miles, must have occasioned much speculation amongst the surrounding tribes; and their history being made known to them, the probable cause would be developed. And when the fact of the position of Trebisonde was made known to them, they might derive conviction from another source. For when they saw the *Harpasus* running to the south-east, and learnt that it received the *Araxes* (their *Phasis*); and that the collective stream continued on the same S. E. course; they would have been convinced, that those waters could not reach *that quarter* of the Black sea; since the mountains in which they had their sources, lay to the north, between them and the quarter in which the Black sea would necessarily be looked for. For, in their estimation, that sea extended eastward, even beyond their station on the *Harpasus*. It was not necessary that intelligent persons should have seen all these particulars, with their own eyes; but having seen a part, and satisfied themselves concerning the rest, conviction would readily follow.

Their *return* from the *Harpasus* must have been, in a great

part, by a different route from that, by which they came; as they went the first four days through the country of the *Scythians*: who are then mentioned for the first time. Perhaps they may have inhabited the province of Kars, or *Chorsene*.\* And as nothing is now said respecting the *Chalybians*, or the *Taochians*, it must be supposed, either that their countries were avoided altogether, or that they were averse to recommencing hostilities. The Greeks provisioned themselves in the country of the *Scythians*; and were received as friends in that of *Gymnias*. Their military character, now so well established in this quarter, might perhaps have been the means of preserving the peace.

It is not said to what country *Gymnias* belonged; but it appears to have been the capital of a district, occupying the space between *Passin* and the plain of *Chalderan*.

Their guide from *Gymnias* had promised to shew them the sea, in *five* days; and performed his promise, accordingly, when on the fifth day they ascended "*the holy mountain of Theches*."† In their way to it, they passed through a country which was at enmity with *Gymnias*: and which appears to have extended to the foot of that mountain. The guide invited the Greeks to invade and destroy this country, which they seem to have agreed to very readily: because, on occasion of the great and universal shout raised by the van of the army, on the first view of the sea, it was believed by Xenophon, that they were attacked in front by new enemies, whilst *those they had plundered*, were following them.

In effect, considering their numbers and their necessities, it

\* We ought, perhaps, to read *Scythians*, instead of *Scythians*.

† Lib. IV. c. 41.

is rather surprising that they should have been received on a friendly footing, any where.

There is no question, respecting the situation of the mountain of *Theches* ; whatsoever there may be, respecting the way by which the Greeks came to it, from the *Harpasus*. Hajy-Kalifa mentions one of the *Sanjigats* (or districts) of Erzerum, under the name of Tekman ; “ which has two castles.” He adds, that from its great elevation, its weather is so severe, that in some years, they have no harvests : and that it lies to the northward of Erzerum.

Travellers remark the castle of Teke, situated on the crest of a ridge of high mountains, extending from east to west, and lying intermediately between Trebisonde and Erzerum. This chain is the same with that named Agatsbashi, or Agatchbashi, by Hajy-Kalifa ; by whom it is said to extend from Trebisonde, to the distance of 50 farsangs, eastward. These are the *Moschi*, or *Moschica* mountains of ancient geography ; and the mountain of Teke or *Theches*, is a portion of this chain ; which (as we have said in page 238,) terminates on the west at cape Jorus, or Yorus, the same with the *Hieron-orus* of the ancients : and clearly identifies the *holy mountain* spoken of by Xenophon.\*

Here it is proper to observe, that the ridge of Agatsbashi, is the southern boundary of the beautiful and extensive valley of Baibort, watered by the heads of the river Shorak, which is the *Apsarus* and *Bathys* of antiquity. This valley, which is

\* The most distinct notice respecting the castle of *Teke*, occurs in *the new Memoirs of the Missionaries*, 1723, Vol. III. It is a day's journey to the eastward, (or E.S.E.) of *Gumish-kend*, the noted silver-mine, situated at about two journeys to the S. E. of Trebisonde ; and in the upper part of the great ridge of Teke or *Theches*.

said by Hajy-Kalifa to have an extent of three days journey from west to east; and is also of great breadth; is the western part of the country, anciently denominated from the *Moschi*; situated between *Iberia*, *Colchis*, *Armenia*, and the Euxine sea.

The northern boundary of the valley of Baibort, is a lower ridge of mountains, running parallel to the coast of the Euxine; at 15 to 20 miles distant; separating from the before-mentioned ridge, near the castle of Teke; and at the point where the road from the valley in question, leads over the mountain, into that of Trebisonde: in other words, the mountain of the *Colchians*, which was forced by the Greeks. This northern ridge, is at present named *Mesjidi*; most probably the same name with that of *Moschi*: but the ancients seem to have applied the name more particularly to the Agatsbashi, or southern ridge. As the country of the *Moschi* was comprised generally between these two ridges, it is possible that the same name might have been applied to both.

The valley of Baibort was anciently occupied by the *Macronians*, whose territory, according to Xenophon, bordered on M. *Theches* (Teke) on the one hand, and on the *Colchian* mountains, on the other; and according to Pliny, (Lib vi. c. 10) had the river *Apsarus* (our Shorak) flowing through it. The territory of the *Macronians* is therefore completely identified: a point of considerable importance in the present discussion.

It is not in proof from what part of the ridge of Agatsbashi (or Teke) the Greeks first saw the sea: but it has been suggested, in page 238, that it was at the place, where the great road passes over it, between Erzerum and Trebisonde; on a supposition that they came from the quarter of Comasour, regarded as *Gymnias*. But this is no more than a supposition:

and as it is possible that the reader, in conformity with the opinions of some great authorities, may believe that *Gymnias* was situated somewhere on the river *Shorak* (*Apsarus*) in the heart of the country of the *Moschi*, it will be proper to state that such a supposition presents a very great difficulty to the author. For if the Greeks advanced from the east, through the country of the *Moschi*, and the valley of *Baibort*, the mountain of *Teke*, would have lain very far to the southward of their route. It cannot be imagined that they would have allowed themselves to be carried thither, out of their way, and induced to climb a lofty mountain, merely to obtain a view of the sea: for as they, after marching more than three days, from *M. Theches*, ASCENDED the mountains of the *Colchians*, it is clear that they did not *keep to the mountains*, after having had a view of the sea; but descended into the *vallies*: of which the territory of the *Macronians*, through which they marched three days, appears, by the narrative of the passage through it, to have chiefly consisted. To which may be added the testimony of *Pliny*, that the *Macronians* were seated at the river *Apsarus*; which appears most decidedly to be the *Shorak*, which flows through the valley of *Baibort*; in which the *Macronians*, from all the above circumstances, ought to be looked for.

Moreover, had they advanced by the country of the *Moschi*, and the valley of the *Apsarus* (or *Baibort*) they must have crossed the territory of the *Macronians*, in order to arrive at *M. Theches*; which is contrary to the order of events in the history: and since the ridge of *M. Teke*, or *Theches*, forms the southern boundary of the *Macronians*, how can it be reconciled to the history, that the Greeks came first to *M. Theches*,

and afterwards to the *Macronians*, but by their coming from the quarter of Comasour ?

The most natural supposition therefore, appears to the author to be, that the Greeks ascended the ridge of Teke in their proper road from Comasour (*Gymnias*), and descended from thence into the valley of Baibort, (that of the *Macronians*); and after somewhat more than three marches through the valley, finally ascended *from the opposite quarter*, the same mountains which M. Tournefort first came to, *after leaving the valley of Trebisonde*; and which are the *Colchian* mountains of the Greeks; so named from their forming the eastern boundary of the territory of Trebisonde; reckoned by the Greeks, a part of the country of *Colchis*, taken at large.

The summit from whence the Greeks first saw the sea, appears to have been full six ordinary marches short of Trebisonde; although the history gives little more than five very short ones. For the country through which the road led, is so strongly marked, by its mountains and vallies, in the above description; and by the space occupied by them; that if the Greeks really came by way of Comasour, there appears to be no room for doubt, concerning the distance.

In the first place, some distance is to be allowed between the *summit*, and the boundary of the *Macronians'* territory; for the guide is said to have "*shewed them the road that led to that territory*" (Lib. IV. c. 41): and to which they came, in the course of the first day's march, after the guide left them. Nor can it be supposed that their camp of the preceding evening, was on the mountain itself, but rather that they descended into the valley before they halted: whence the boundary of the *Macronians* ought to have been at a considerable

distance, from the point of view. In the next place, the Macronians "conducted them through *their* country during three "days, till they brought them to the mountains of the Colchians;" (c. 44). And after the Greeks had possessed themselves of the passages of these mountains, they encamped in the villages above the ascent, (where the *honey* was found) c. 45 : from whence, according to the history, they made two marches *only*, to Trebisonde. (c. 46.)

But it appears from M. Tournefort's report, that the distance is no less than 38 British miles from Trebisonde to the *western* foot of the *Colchian* mountains, in the road towards Teke and Comasour (see page 237, and note);\* and probably

\* M. Tournefort's route from Trebisonde to Erzerum, in the suite of a Turkish Pasha, was very circuitous : not merely from choice, (although this was the smoothest road) ; but partly on matters of business. Leaving the valley of Trebisonde, by the east, they ascended the Mesjidi mountains, or those which shut up the valley of Baibort, on the north, and proceeded along them in an E.N.E. direction, until they descended near *Gresi*, situated in the just mentioned valley, at about 70 miles from Trebisonde, but at a day's journey only, from the sea coast ; and at the northern extremity of the valley. These mountains were perfectly bare of wood ; whereas the southern range (see above, page 244) appear to have derived their Turkish name of *Agatsbashi*, from their being covered with forests.\*

From *Gresi* they proceeded southward, crossing the valley, which is remarkably well watered, by the streams that form the head of the *Shorak* or *Apsarus* river ; and is from 35 to 40 miles in breadth in that part. On leaving the valley of Baibort they crossed the ridge of *Agatsbashi*, or *Teke* ; (but without mentioning any name) and possibly by the same road as that by which we have supposed the Ten Thousand to have come. (See M. Tournefort's Travels, Vol. III. Letter 6.)

A second road from Trebisonde to Erzerum, leads much more direct, from the first ascent of the *Colchian* mountains, by *Arouska*, leaving the castle of *Teke* to the south, at no great distance ; and crossing *Agatsbashi* by the same road as the former. And a

\* A vast forest of timber trees in Asia Minor, penetrated by the *Sangarius* river, is named by the Turks, *Agats*, or *Agatch-Degniz* ; i. e. the "*Sea of Trees*."

4 more may be allowed, from the mountain foot, to the *opposite* brow of the same mountain, on which the Greeks encamped; that is 42 miles in all; equal to three mean marches: and it has been remarked that Diodorus reports that number.

Upon the whole, therefore, one cannot suppose that the point of view, was nearer than 6 marches to Trebisonde: and the castle of Teke itself, appears, by the routes of travellers, to be about 4 marches from the same place. (See the note to page 244.)\*

It is certain, that if the text of Xenophon be followed, the distance would be very much less: for no more than 17 parasangas are allowed for five marches, from their entry into the country of the *Macronians* to Trebisonde: or less than  $9\frac{1}{2}$  miles for each day: when they may be supposed to have been very impatient to reach the sea; since a mere glimpse of it from a great distance, had produced such effects. The reader

third road, the most direct, but the most difficult, is by *Gumishkend* (or the silver mine) situated in the higher part of the mountain of Teke.

The shortest road is reckoned 6 ordinary journies; although M. Taverniere, from report, states it at 5. The Pasha made 13 easy journies of about 14 miles *per* day.

\* It may be concluded, that the point from whence they had the first view of the Black Sea, could not be less than 45 Geographic miles (52 British) from the nearest shore: and the castle of Teke itself, about 30 British miles. Some persons may possibly doubt the fact: and in this case, it must have been such a view, as would not leave a shadow of doubt. However, travellers are aware that the sea is distinctly seen from a much greater distance. It chiefly depends on the elevation of the point of view: and that of Teke or Tekman is exceedingly elevated; as appears by the description of it by Hajy-Kalifa. (See page 244.)

Some of the ancients, according to Strabo, believed, that from the summit of mount *Argæus*, near *Cæsarea-Mazaca*, both the Mediterranean and Euxine seas could be seen. One may reasonably doubt, in respect of the Euxine, at nearly 200 miles distant; but the Mediterranean, at somewhat more than 100, was probably visible: for one can scarcely believe that there was no foundation for any part of the story.

however will, of course, decide for himself ; but it is necessary to repeat, that however erroneous the opinion of the author may be, respecting the position of the *point of view* ; that of the castle and mountain of Teke cannot be disputed ; as it rests on the authority of travellers, and on the geographical descriptions of Hajy-Kalifa.

Xenophon's description of the scene, on the arrival of the van-guard of the army on mount *Theches*, where they caught the first glimpse of the sea, is highly pathetic (Lib. IV. c. 41). No one, we presume, (and indeed hope,) can read it without emotion. What a number of tender ideas must have crowded at once into their minds ! The thoughts of home, wives, children, friends,—thoughts which they had scarcely ventured to indulge before that moment ! In a word, it was a prospect of DELIVERANCE ; like an opening view of HEAVEN to DEPARTING SOULS !

Military discipline was dissolved in an instant ; and the SOLDIER was lost in the MAN : for, in their eagerness to delight their eyes with a view of the sea, the whole army, not excepting the rear-guard, set a running ; so that the beasts of burthen and horses were driven forwards ; and the whole, forming one mass, rushed towards the summit of the mountain. To feel the full force of the description, although the facts speak so strongly for themselves, one must either be deeply read in the human heart ; or, by a long course of fatigues, privations, and dangers, be fitted to sympathise with men, who had struggled so long with hunger, cold, and a succession of new enemies, from the plains of *Babylon*, to the craggs of *Caucasus* ! Men who had passed a winter, and that ordinarily without cover, amidst the snows of Armenia : and

who appear in every situation, to have accomplished more than could have been expected from human means !

During the interval that discipline stood suspended, the army, of their own accord, raised a large Tumulus of stones, and erected a trophy on it. As it is very unlikely that the stones should have been dispersed; it could be wished that it was enquired after : for, as a monument of antiquity, it is nearly as curious as the *Tumulus* of Hector : and with those who disbelieve the story of the *Iliad*, much more so. It would be curious alone, on this ground ; to see what quantity of vegetable earth has been collected on it, in the course of 22 centuries : but it would infallibly mark the line of march of the Greeks.\*

The *Colchian* mountains, which separated *Colchis* from the *Macronians*, are a marked feature as well in the history, as in the geography. The place of ascent of these mountains, from the quarter of Trebisonde, remarked by M. Tournefort, is said by Hajy-Kalifa to form a pass, of such a nature as to have been sometimes shut up with a gate, and guarded. It seems not improbable that the Greeks, who advanced towards Trebisonde from the eastward, should have entered the *Colchian* territory by *the same road across the mountains*, which M. Tournefort took, in his way from Trebisonde to the eastward : and where probably there might have been a kind of *gap* in the ridge, in which the pass was situated. And it may be supposed that this *point* would have been common to either of the

\* The author is sanguine enough to believe, that there would be no great difficulty in finding it ; as it must doubtless be situated on some principal road, leading from Trebisonde to the eastward or south-eastward ; and either on the *summit* of a mountain, or in some very elevated situation.

routes; whether the Greeks had advanced from the quarter of Comasour, or through the country of the *Moschi*. And here of course, the *Colchians* would post themselves, in order to oppose the entrance of the Greeks. It has been already remarked, that it is in this part, that the mountains separate into two diverging ridges, to inclose the valley of Baibort, and the country of the *Moschi*, generally.

The mode of attack employed by the Greeks, is well worth the attention of military men; and is exceedingly curious in itself. The *Colchians* had formed their line on the brow of the mountain: and the Greeks had originally formed theirs, at the foot of it; with a view to ascend, under that disposition. But finding that their line would not only be outflanked, by that of the enemy; but that it would also be broken, by the steepness, and difficult nature of certain parts of the ascent; it was deemed necessary to make a total change in the mode of attack.

The new disposition, was that of forming the whole of the heavy-armed men, into columns of about 100 men each; and these were placed at such a distance from each other, as to form a *line of columns*, that would outflank the enemy; at the same time, that the columns were near enough to derive support from each other, if required. The light troops were formed in three bodies, of about 600 each; of which two were placed beyond the extremities of the line, and the third in the centre. By this mode, each column being at liberty to seek its own way, was enabled to ascend by a part of the mountain that was found the easiest of access.

The attack succeeded accordingly. Cheirisophus and Xenophon had posted themselves at the head of the two light-

armed divisions, which were placed on the flanks: and of course, beyond the enemy's line: and these, as it may be concluded, advanced with greater celerity, than the heavy-armed could possibly do. Hence the enemy, fearing to be taken in flank, filed off to the right and left, in such numbers as to leave a great void in their centre; which the central division of the light armed took advantage of, and running forward, gained the summit: after which the enemy made little resistance. (Lib. IV. c. 44.)\*

The Greeks having gained the summit, encamped in the Colchian villages on the mountain: and here the honey was found, which produced those violent and extraordinary effects on those who eat of it. (c. 45.) It is well understood that this honey, is made from the flowers of a species of *Rhododendros*; which M. Tournefort saw, and describes, on his way from the river Sackariah (*Sangarius*), to some distance beyond Trebisonde. But it is worthy of remark, that he saw the plants after he ascended the mountains, beyond Trebisonde; which we have supposed to be the same, with those on which the Greeks encamped, after they had possessed themselves of the passage. For, on the day on which he ascended the mountain, he remarks, that two sorts, with purple, and with yellow flowers, frequently appeared by the side of streams.† He observes, in another part of the book, that the natives have an idea, that the honey made from the purple flowers, stupifies those who eat of it, and causes lethargies: as also, that the effluvia of the flower, produces dizziness.

\* M. Larcher, Vol. I. p. 332, says, " Cette disposition est très-savante, et doit être méditée par tous ceux qui se destinent au commandement des armées."

† M. Tournefort's Travels, Vol. III. Letter 6.

It appears extraordinary, that no enquiry has been made concerning the use to which the honey was applied. Is it used in small quantities, to produce gentle intoxication ; as a substitute for opium ?

The reception of the Ten Thousand by the people of Trebisonde, was the most hospitable imaginable : but they were unable to supply such an army, for any continuance, from their own proper stores. The Greeks, therefore, plundered those of the *Colchians*, who were not in alliance with the people of Trebisonde. Such a proceeding was to be feared at all events ; but more so, as the *Colchians* had themselves originally provoked the hostility of the Greeks, by the opposition given to them, on the frontier.

Trebisonde, or rather *Trapezus*, which was its ancient Greek name,\* was situated “ in the country of the *Colchians* ;” and was a colony from *Sinope*, which was itself a colony of the *Milesians*. It derives its historical fame, more from the circumstance of its receiving the Ten Thousand, after their wonderful retreat, than from having been the capital of a portion of the Lower Empire : since the former event fills the mind with ideas of a more lofty and magnificent kind.

It is still a place of some consideration. For a description of modern Trebisonde, see Tournefort's *Travels*, Vol. III. ; and M. De Beauchamp's *Voyage*, in the *Mémoires sur l'Égypte*, Vol. II.†

\* The eastern nations, generally, are said to call it *Trabizon*.

† The territory which included Trebisonde, continued to bear the name of *Colchis* down to the time of Arrian ; although the tribes of *Heniochi* and *Sydratae* lay between it and the river *Apsarus*, generally reckoned the western boundary of the *proper Colchis*. Perhaps, the districts of those tribes, may have once formed a part of

*Colchis* ; they occupying the narrow slip of country, between the *Moschian* mountains, and the sea ; and thus Trebisonde became an extension of the *proper*, or *Phasian Colchis*.

According to Xenophon, *Colchis* extended to the distance of three marches, westward from Trebisonde. He even includes *Ceraxunte*, (or Kirason) in it : but this is an error, as will be shewn.

The *Machelones* (of Arrian) said to border on the *Colchians*, are probably the *Macrones* of Xenophon and Pliny. (See the Periplus of the Euxine Sea.)

## CHAPTER XV.

THE GREEKS PROCEED FROM TREBISONDE TO BYZANTIUM.  
THEIR WINTER CAMPAIGN WITH SEUTHES, IN THRACE:  
AND THE TERMINATION OF THE EXPEDITION, BY THEIR  
JUNCTION WITH THE NATIONAL ARMY OF GREECE, IN  
ASIA MINOR.

---

*The TEN THOUSAND remain a whole month at Trebisonde—From thence, the army in general, marches along the coast, to Cotyora, in their way to Byzantium; the remainder, with the baggage, accompany them in ships—Warfare amongst the Mosynoecians—Visit Cerazunt or Cerasus; called also Pharnacia—Cotyora, the term of the Land Expedition from Trebisonde; the whole army embarking at that place—Pass the Jasonium promontory, where the Argonauts landed—Mouths of the rivers Thermodon and Halys—Anchor in Harmene, a port of Sinope (now Akliman)—Second Voyage, which carries them to Heraclea of Pontus—Here they divide into three bodies; one going by land, two by sea—The division composed of Peloponnesians, lands at Calpé in Bithynia, on a predatory expedition—The greater part of them cut off by the natives; the remainder saved by the sudden appearance of Xenophon's Division—The three divisions again unite, at Calpé—Calpé a kind of Gibraltar; and with the same Greek name—Death of Cheirisophus—March to Chrysopolis,*

at the Bosphorus of Thrace—Critical situation of the Greek army there; and at Byzantium—Compelled by want, to enter the service of Seuthes, a Prince of Thrace—Make a winter campaign of two months—Salmydessus, famous for shipwrecks—The remains of the army, now reduced to about 6000 men (out of 12,800), are engaged to join the Grecian national army, under Thimbron; who had taken the field against the Persians—They proceed, accordingly, by way of Lampsacus, Troas, and Adramyttium, to Pergamus—XENOPHON from a state of actual poverty, finally enriched by a capture.

AFTER staying 30 days at Trebisonde, the main body of the Greek army marched by land towards *Byzantium*; first sending on board the ships which they had collected, all the sick persons; the men above 40 years of age; the women and children; and such of the baggage as was not absolutely necessary on the march. (Lib. V. c. 11.)

The history brings the army, at the end of the *third* march, to *Cerazunt* or *Cerasus*: and afterwards in the course of the march (without notice of time or distance) to the borders of the *Mosynæcians*. Through their country, it is said they made 8 marches; which brought them to the *Chalybians*, who inhabited a small district: and finally to *Cotyora*, situated in that of the *Tibureniens*. (Lib. V. c. 20.)

Here then, are 11 marches given, besides the space whose length is not recorded; and yet the whole distance between *Trebisonde* and the site of *Cotyora*, is no more than 8 or 9 ordinary marches. Nor is the error in the aggregate distance the only one: for *Cerazunt* is nearer 6 than 3 marches (as is represented in the history), from *Trebisonde*. Arrian allows

745 stades : but although this distance is over-rated, yet Kira-son, which is doubtless the same place, is, according to M. De Beauchamp, at least 60 G. miles in direct distance, from Trebisonde ; or equal to very nearly 6 ordinary marches.\*

There are yet, other difficulties. *Cerazunt* is said to be situated within the country of the *Colchians*. (Lib. V. c. 11.) If this was correct, *Colchis* would be extended westward to an improbable length : nor would there be room for the districts of the *Mosynæci*, *Chalybes*, and *Tibureni*, between *Cerazunt* and *Cotyora* ; which places are not more than about 30 G. miles distant from each other.†

It must therefore be concluded, either that Xenophon wrote entirely from recollection, which sometimes failed him ; or that his notes were intermixed and confused : as appears in another place, where he describes the *Jasonian* shore, and the mouths of the *Thermodon* and *Halys* rivers, to be to the west of *Sinope*, instead of the east.

There is no question, however, but that *Cerazunt* was visited by the Grecian army ; for they halted there 10 days ; during

\* The southern coast of the Euxine, from the canal of Constantinople to Trebisonde, was traced by M. De Beauchamp, in 1797 ; and was corrected in 15 different points, by celestial observations ; or by time-keepers. See *Mém. Egypt.* Vol. II. The tracing of the coast, was obligingly procured for the author, by the favour of M. Otto, in 1802.

The author is indebted to his friend, Dr. Charles Wilkins, for a translation of the modern names of places, along the southern and eastern coasts of the Euxine ; from a Turkish chart of that sea, drawn by Ibrahim Effendi, in 1729. They are there written in the Arabic character : and it may be observed, by the specimens given in the Map No. II. how close an agreement there is, between the roots of the modern names, in the Turkish Map ; and those of the ancient Greek names, in the *Periplus* of Arrian. The names at large, which are very numerous, will appear in a Memoir on the subject of that Periplus.

† According to Arrian 330 stades.

which time there was a review, and an account of their numbers taken. There was also, a distribution of prize money. And we learn also, that whilst the camp was at *Cotyora*, individuals of it were in the habit of going to *Cerazunt*; a certain indication that it was not within three marches of Trebisonde. Moreover, Xenophon speaks as if they had met with no interruption, between *Cerazunt* and *Cotyora*; when he says, "This happened the same day on which we left *Cerazunt*, to march hither."\* If, according to the order of the events in the history, they had made war on the hostile tribe of the *Mosynæci*, after they had left *Cerazunt*; Xenophon, in all probability, would not have spoken in the above manner, respecting the march. But perhaps, the best proof of the existence of an error, is, the want of space for the 8 marches through the country of the *Mosynæci*, between *Cerazunt* and the *Chalybes*, &c.

It may be supposed, therefore, that the first three marches from Trebisonde, brought the Greeks to *Coralla* (now *Korabali*), which might well be within the boundary of *Colchis*; and that the minutes or notes for the journal, *from thence*, may have been lost: so that Xenophon confounded the former with *Cerazunt*. That they afterwards came to the border of the hostile *Mosynæcians*; and successively to that of the friendly tribe of the same name: and that the 8 days said to be employed in *marching*, were rather the number of days employed altogether, *amongst* those tribes: and which included both the warfare, and the time of waiting for the arrival of the flotilla of their allies.†

It may be suspected that *Cerazunt* was situated within the territory of the friendly *Mosynæci*. For Xenophon speaks of

\* See Lib. V. c. 34.

† C. 15.

“ towns upon the mountains, belonging to the *barbarians*, who “ were in alliance with the people of *Cerazunt* ;” and with which the people of the camp had a friendly communication. These towns, therefore, we conclude, belonged to the friendly *Mosynæcians* : for the mountaineers at 3 marches from Trebisonde, were the *Drilians*, with whom the Greeks had waged actual war, whilst at Trebisonde.

*Cerazunt*, which was also called *Cerasus*, and *Pharnacia*, was a colony of the *Sinopeans*. It has been celebrated on occasion of its having produced the cherry trees, which were said to have been first introduced into Europe by Lucullus.

The country of the *Mosynæcians* is described by Xenophon as consisting of a succession of very deep, hollow vallies, with fortified posts on the intervening heights. The *Mosynæcians* were thought by the Greeks, to have been, in point of manners, the farthest removed from civilization, of any tribe, with whom they had communicated in the course of their expedition. (Lib. V. c. 19.)

The precise site of *Cotyora*, is not known in modern geography ; but its general position cannot be misunderstood ; since according to Arrian, it was 180 stades to the eastward of the promontory of *Jasonium* ; 330 to the westward of *Cerasus* : the former of which is so well known, under the modern name of Jasoun, or Yassoun ; the latter under that of Kirason. At the time of Arrian's visit, it was only a small village. Four centuries and upwards, may be expected to make great changes in the condition of a city : but it is possible that it might never have recovered from the effects of the visit of the Ten Thousand.

From *Cotyora*, the Greeks “ having collected as many ships

“ as were necessary, embarked and sailed with a fair wind,  
 “ all that day, and the next night ; keeping *Paphlagonia* on  
 “ their left hand :\* and the day after, they arrived at *Sinope*,  
 “ and anchored in *Harmene*,† one of its ports.” (Lib. vi. c. 4.)  
 It appears that a passage which occurs afterwards (in chapter  
 10,) ought to have been inserted here ; namely, that in their  
 passage “ they saw the *Jasonian* shore (or *promontory*) where  
 “ the ship *Argo* is said to have come to land :‡ and the mouths

\* The country of *Paphlagonia* at this time, extended much farther to the east than in Roman times ; when the *Halys*, at its *embouchure*, formed the common boundary of *Paphlagonia* and *Pontus*. For the Greeks, whilst at *Cotyora*, foraged within the limits of *Paphlagonia* : and that it extended to the eastward of the *Thermodon* river, is shewn in Lib. V. c. 26. It is probable that the *pass* mentioned by *Hecatonymus* was situated in the mountains that bound the plain of *Themiscyra*, on the east ; and that the plains said to lie beyond the pass, were those of *Themiscyra*. (See also c. 1. and 21.)

† *Harmene*, now Ak-Liman (the *white port*) is a sheltered anchorage at 4 or 5 miles to the northward of *Sinope* : and is in effect the same to the bays of *Sinope*, that *Ramsgate* pier is to the *Downs* ; there being no sheltered anchorage at *Sinope* itself with certain winds.

*Sinope* is still known by the name of *Sinub*. This city, so highly celebrated in ancient history, as the first in point of rank, of the Grecian colonies within the *Euxine*, was founded by the *Milesians*. At present it is in a low state of decay, though not utterly extinguished, like its parent city. It is situated at about 20 miles to the S. E. of *cape Indgé* ; and so placed, as to occupy the *Isthmus* of a peninsula, about 6 miles in length, which affords cultivated land, pasturage, and security to their cattle, in the event of a siege : at the same time that it has a bay for anchorage, on either side of the town.

The reader will find many curious particulars relating to its modern state, in *M. Tournefort's* 3d volume ; and in *M. De Beauchamp's* account of his voyage, to and from *Trebisonde*, in the 2d vol. of the *Mém. sur l'Egypte*.

‡ See *Apollonius Rhodius*, Lib. II. and *Strabo*, p. 543. See also *Pliny*, Lib. VI. c. 4.

This promontory projects so far from the general direction of the coast, and from the deep gulphs on both sides of it, as to present to navigators, when opposite to it, the appearance of an island. It therefore seems perfectly natural, that the *Argonauts* should have landed there, in preference to many other places. It is named *Genetes* by *Apollo-*

“ of several rivers ; first that of the *Thermodon*, then of the “ *Halys*”—because these objects really occur between *Cotyora* and *Sinope* ; and not between *Sinope* and *Heraclea*, as the text has it. In whatsoever way this transposition happened, there can be no doubt, what the *true reading* ought to have been.

Two days are stated in the history, as the time employed in the passage from *Harmene* to *Heraclea* (of *Pontus*). After this, the rivers *Thermodon* and *Halys* are mentioned, as above said ; but which are misplaced ; and then the *Parthenius*, which really occurred within that interval. And “ having sailed by “ the last, they arrived at *Heraclea*, a Greek city, and a colony of the *Megareans* ; situated in the country of the *Maryandinians*.”\* (Lib. VI. c. 10.)

The time employed in the voyage from *Cotyora* to *Harmene* (the port of *Sinope*) is said to have been two days, with the intervening night : and it being in the month of June, when the night was so short, that they might have sailed on, uninterruptedly, during the whole included interval ; the time may be regarded as equal to nearly  $3\frac{1}{2}$  ordinary days' sail. And

nus and Strabo ; and Pliny speaks of the *Genetæ* as a people. A tribe of this name still exists, in the country within *Kirason* (ol. *Cerasus*) ; and it appears probable that the modern name of the province of *Janik*, (which includes generally the sea coast of *Pontus*) is derived from *Genetes*. M. De Beauchamp remarked an *ancient square tower*, on the pitch of the cape.

\* *Heraclea*, distinguished by the addition of *Pontus*, has filled the page of history by its grandeur and by its misfortunes : and its remains testify its former importance. It is now named *Arakali*, and also *Pendaracby*, a corruption of Pont-Arakali. For an account of its remains, see M. Tournefort's *Travels*, Vol. III ; and also M. De Beauchamp, in *Mém. sur l'Égypte*. Vol. II.

M. Larcher has been led into an error, respecting the river *Lycus*, at *Heraclea*, in his first note on chapter 10 of the *Anab.* Lib. VI. It is a different river from the *Lycus* of *Armenia*.

the *coasting* distance being about 142 G. miles, the mean rate may be taken at about 41 per day.\* According to the above statement, they must have passed the mouth of the *Thermodon* river, in full day-light on the *first* day : and that of the *Halys* during day-light of the *second* ; but the *Iris* would have been passed during the night ; which may account for its not being mentioned ; for it lies at the head of a deep bay or gulf, whilst the others are at projecting parts of the coast ; and also form very extensive mud banks in the sea ; which could not fail to attract attention.†

A like portion of time, as is said before, was employed between *Sinope* and *Heraclea* : and which being a coasting distance of 190 miles, requires a rate of 54 instead of 41. It may be remarked, that the *Billæus* river is not noticed by Xenophon any more than by *Hecatonymus* of Sinope, in his description of the way between *Cotyora* and *Heraclea* : probably because it was too shallow, to present any impediment to the march. (Lib. V. c. 26.)

From *Heraclea*, the Greeks set out in three distinct bodies for *Byzantium*. One of 4500 and upwards, consisting of *Arcadians* and *Achaïans* ; all *heavy-armed*, set out by sea, in order

\* The *mean* daily rate of sailing of ancient ships has been taken from a number of examples, at 37 Geog. miles, or between 440 and 450 Grecian itinerary stades. (See *the Geog. System of Herodotus*, p. 31, and 679.) Five hundred stades have sometimes been stated roundly, as a day's sail of a ship of those times : equal to about 42 Geog. miles.

† The rivers here mentioned by Xenophon retain nearly the same names to the present times : as the *Thermodon*, now Tarmeh ; the *Partbenius*, Partin, or Bartin. The *Halys* was *nick-named* from its saline quality ; as at present by the Turks *Kizil*, or *Red* river : for *Atoe-sou* appears to be its real name, in the country through which it flows.

to come upon the *Bithynians*, unawares: for they had concerted a predatory expedition merely for the sake of booty; and had placed themselves under the orders of *ten* commanders, who aided their design. They landed at the port of *Calpé*, said (Lib. VI. c. 21) to be situated in the *Asiatic Thrace*; by which the country of the *Thynians* of *Asia* is intended; in other words, *Bithynia*; which formed a part of the dominions of *Persia*, under the government of *Pharnabazus*. *Calpé* is also said to have been situated midway between *Heraclea* and *Byzantium*.

A second body of 2100, of whom 1400 were heavy-armed, marched with *Cheirisophus*, through the territory of *Heraclea* (or of the *Maryandini*); and thence entering *Thrace*, kept to the sea-coast: and the third body, under *Xenophon*, consisting of 2040, of whom 1700 were heavy-armed, proceeded by sea, and landed on the common frontier of *Heraclea* and *Thrace*;\* supposed to be the river *Sangarius*: from whence he marched through the interior country, towards *Chrysopolis* and *Byzantium*.

\* As the text stands, there appears to be a contradiction between the sections 10, 14, and 21, of Lib. VI. respecting the extent of *Asiatic Thrace*. *Calpé* is said to be "situated about the middle of *Thrace*," in 14: and in 21, *Thrace* is said "to begin at the *Bosphorus* and to extend as far as *Heraclea*." Again in 14, *Xenophon* is said to have "landed upon the confines of *Thrace*: and of the territory of *Heraclea*:" and that *Cheirisophus*, "leaving *Heraclea* travelled through the country; but when he "arrived in *Thrace*, he kept near the sea." Moreover in c. 10, it is said that *Heraclea* "is situated in the country of the *Maryandinians*." We can only understand that it was a mistake to say that *Calpé* was situated in the middle of *Thrace*; and that the description in 21, is more correct, where it is said that "*Calpé* lies midway between *Byzantium* and *Heraclea*." For if *Calpé* lay in the middle of *Thrace*, that country must have extended nearly to *Heraclea*; which the voyage of *Xenophon*, as well as the march of *Cheirisophus* disproves. It is most probable that the territory of *Heraclea* extended to the *Sangarius*, where *Asiatic Thrace* began.

The army of the *Arcadians* and *Achaïans* advancing a few miles into the country from *Calpé*, after plundering the villages around, were attacked, and two of their divisions completely cut off, by the *Bithynian* light troops; who were enabled to choose their distance; the others consisting, as is said before, of heavy-armed alone. The remainder, besieged on a hill, were only saved by the sudden appearance of Xenophon's division. They then retreated to *Calpé*, at which place Cheirisophus being also arrived, the remains of this army were once more re-united; though with the loss of about 900 men on the part of the *Arcadians* and *Achaïans*.

Here, the force of the country being collected against them, they were in some danger of perishing through hunger, 500 more being cut off, in their first attempt to forage. But fighting a general battle with the enemy, they gained a complete victory, and were no longer molested. Thus they were compelled to fight for subsistence, even to "*the gates of Greece*."

*Calpé*, their present place of rendezvous, is fully described by Xenophon (Lib. VI. c. 21): and is also mentioned by Arrian in his *Periplus*. It appears to be the present port of *Kirpé*, or *Garpah*. The description of this place by Xenophon, agreeing in so many points, with that of *Gibraltar*, whose ancient name also was *Calpé*, leads one to conclude that the term was descriptive of the nature of the place, in both. At this place Cheirisophus died; having been long ill.

From *Calpé*, the Greeks marched through *Bithynia*, unmolested, to *Chrysopolis*, opposite to *Byzantium*, in 6 days: which, by the distance, allows a mean rate of  $13\frac{1}{4}$  British miles per day. They are supposed to have arrived about the beginning of August, B. C. 400.

The condition of the Greeks after their arrival at the *Bosphorus*, was very unpleasant; and in some degree critical: for on one side they had the *Bithynians*, and whatsoever power the Persians possessed in that quarter, for open enemies; and on the other side, the Lacedæmonian power, newly erected in *Byzantium*, for treacherous friends. The Persian governor of *Bithynia* (*Pharnabazus*), was justly uneasy at their being on his side of the water; and therefore intrigued with the Lacedæmonian admiral, *Anaxibius*, to carry them across, into Europe. This he effected, by the promise of pay; which he never performed: so that they were reduced to the necessity of subsisting, by "taking provisions out of the villages" of the Thracians:" in other words, by plunder. For they had been thrust out of *Byzantium*; and but for the address and resolution of *Xenophon*, would have plundered it, in resentment of the ill usage they had received there. At this time the Lacedæmonians, by the termination of the *Peloponnesian* war, being complete masters of Greece and its colonies, ruled in *Byzantium*, as every where else, with a high hand; and even sold for slaves, 400 soldiers of the Grecian army, who had been left there sick. (Lib. VII. c. 16.)

*Anaxibius*, in resentment of a slight which he had received from *Pharnabazus*, was taking steps towards conveying the army back again into Asia: and for this purpose had directed the troops to be conducted to *Perinthus* (afterwards called *Heraclea*) on the *Propontis*. But the new governor of *Byzantium*, *Aristarchus*, prevented it, in favour of *Pharnabazus*: the two officers of government, thus counteracting each other.

In this dilemma, from the want of subsistence, and of regular employment, the Greeks were compelled through necessity

to enter the service of the *barbarian* Seuthes; a petty prince of *Thrace*, and governor of the *European Thracians*, subject to the king of Persia. His proper territory appears to have consisted of a large part of that triangular space, situated between the approximating parts of the *Euxine* and *Propontis*, above *Byzantium*: but chiefly on the side towards the *Propontis*. As he offered (or affected to offer) to Xenophon, the towns of *Bisanthe* (Rodosto) and *Ganos*, his dominions must have extended along the *Propontis*, as far to the west as the *holy* mountain of *Ganos*.

In his service they continued upwards of two months; during which time they reconquered for him, his paternal inheritance.

It is not easy to trace the route of the Greeks during this short campaign. Seuthes was at first encamped at 60 stadia distant from *Perinthus*, inland. From thence they marched to attack "the mountain *Thracians*;" and having gained the summit, descended into the plain of the *Thyni*. Thence they marched into "the country called the *Delta*, belonging to the " *Thracians*, who lie above *Byzantium*:" and from thence, against "the upper *Thracians*;" and "with the *Euxine* sea on their right hand, they arrived at *Salmydessus*."\* This appears to be the most distant point of their march from *Perinthus*; and is very far short of *seven* marches; though Seuthes says, in answer to a question of Xenophon's, that he shall not go to a greater distance than *that from the sea*.† The *Propontis*, no doubt, is to be understood; the sea, on whose shore they then were: in other words, the distance from the original place of outset, of the Greeks. The *Euxine* could not have been in the contemplation of Seuthes.

\* Lib. VII. c. 41, and 44.

† C. 25.

It would appear then, that the *mountain Thracians* should be the inhabitants of the mountainous ridge lying north from *Heraclea* (or *Perinthus*) ; and extending between the *Euxine* and the *Hebrus*, from the quarter of Kirk-kilissa, to that of Midya, or *Salmydessus*. That having crossed this ridge, they descended into the plains between it and the *Euxine* : and which may be the plain of the *Thynians* ; as we find a corresponding narrow tract along the *Euxine*, on the east of the *Bosphorus*, named from the *Thyni*. There was also a town named *Thynias*, on the sea-coast within the tract described by Xenophon : now called *Aineada*.

It would, however, appear at first sight, as if the country of the *Thynians* was that in which Xenophon first met Seuthes ; that is, near *Perinthus* : but in the progress of the army, no *Thynians* are heard of, until they had passed the mountains. (Lib. VII. c. 34.)

The *Delta* we cannot but regard as the triangular space between the *Euxine*, the *Propontis*, and the *Bosphorus* ; and which has *Byzantium* at the lower extremity : perhaps the tract generally, which the Emperor Anastasius afterwards shut up on the land side, with a wall. It is true that M. D'Anville referred this to the *triangular point* of *Dercon*, or *Derkous* : but it is not only styled a *country*, by Xenophon (Lib. vii. c. 41) ; but *Cyratades*, in the same book, (c. 11) proposed to carry the army thither, from *Perinthus*, in order to enrich them with the booty. This of course is only applicable to a tract of some extent ; and not to a mere point of land. One month of their service had expired, whilst they were in the *Delta*.

This position of the *Delta*, is moreover strengthened, by what follows : for they marched from thence, keeping the

*Eurine* on their right hand, to *Salmydessus* ; now *Mydia*. (C. 44). At this place, shipwrecks were so common in those days ; (and indeed that whole coast is very dangerous at present ; from the *apparent* necessity of keeping close to the shore, to prevent missing the narrow entrance of the *Bosphorus*) ; that the *Thracians* of the coast (the *Thynians*) raised pillars, in the nature of land-marks or boundaries ; in order to point out each man's jurisdiction ; that when wrecks came to land, there might be no disputes concerning the property of them. (C. 44.)\*

\* According to the Poet :

—" rich shipwrecks bless the lucky shore."

The same state of things having existed at all times, on that particular part of the coast ; it must be owing to some natural cause, perpetually operating. This cause, without doubt, is in the first instance, the necessity, real or supposed, of keeping close to the shore, in order not to miss the mouth of the *Bosphorus*. This, of course, subjects them to be *embayed*, in a situation, where the frequency of boisterous sea-winds, places them on a very dangerous *lee shore* : and where the *general surface* of the sea, is in motion, towards the opening of the canal of Constantinople ; impelling them towards it.

The author is informed, by a correspondent at Constantinople, that there are two lofty hills on the Asiatic side of the strait, which furnish a *line of direction*, on which ships, from a distant offing in the Black sea, may run securely in, to the opening of the strait, or canal. Of course, in clear weather, there need not be any danger incurred, either of missing it, or of being embayed on a lee shore : and in thick weather, prudence would dictate the measure of keeping aloof, until a more favourable season.

There is yet another serious danger, occasioned by the mistake of a small bay, for the mouth of the canal, in thick weather. This bay is much nearer to *Salmydessus* than to the canal.

Xenophon in the same place, speaking of the articles found with the people who plunder the wrecks, says, there are many "*books* and several other things, which the sailors " are accustomed to carry in their chests." M. Larcher wishes to substitute *cordage* for *books* ; from the similitude of the two names, in the Greek, and the improbability

From *Salmydessus*, the Greek army, with Seuthes, returned towards the *Propontis*; and encamped in the neighbourhood of *Selymbra*. It is not said, by what route they returned.

Two months had now nearly elapsed, since their engagement with Seuthes, when commissioners from the Lacedæmonians, came to engage the army to join that of Thimbron, in Asia Minor; with an intent of making war on Tissaphernes. Seuthes, by this time, had no further use for the Greeks; so that both parties were content to separate: but Seuthes, like a true barbarian, withheld the pay which he had agreed to give; and it was not without much difficulty that any part of it was obtained. The pay agreed for, was a *Cyzicene* (about 18 shillings) per month, for each private man, 2 for the captains, and 4 for the generals. The pay now agreed for, by the Lacedæmonian commissioners, was a *Daric* instead of a *Cyzicene*; and was of the value of somewhat less than 13 shillings; and although little more than two thirds of the former pay, yet the proposal was said to be received by the soldiers with satisfaction. For in this case, they felt that they were in the immediate service of their country; that is, Greece at large: but in the former, they found themselves fighting for objects, with which their country had no concern: or it might happen, which were contrary to its general interests. Such distinctions have been made at all times: and is a proof,

of there being such a plenty of books in that age, as to constitute an article of commerce, &c. But sailors do not carry *cordage* in their chests; and it appears probable that the sailors had books for their use or amusement, as at the present day. The people who navigated the Euxine at that time, were generally Greeks. So that, by his translation, an interesting anecdote is lost.

that patriotism resides in the breasts of the lowest orders of the community.\*

It is not said at what place the army embarked for Asia Minor : but as *Perinthus* was the port first intended by Anaxibius, it was probably there. Xenophon, who now conducted the army, landed at *Lampsacus*, and proceeded thence by *Troas*, *Antandrus*, and *Adramyttium*, to *Pergamus*. At *Parthenium*, or near it, he afterwards was joined by Thimbron, the Lacedæmonian general, with the rest of the Grecian forces ; the whole composing the army destined to attack the Persian provinces in Asia Minor, which were subject to the command of Tissaphernes and Pharnabazus, their governors.

In this age of luxury and frivolity, in matters of expense (but which, for the best of reasons, cannot be charged upon the military), many will smile, at hearing that Xenophon, who, it might perhaps be supposed, must have had opportunities of enriching himself in the course of the expedition ; yet, whilst in the act of conducting the army to its rendezvous, was compelled to sell his favourite horse, to raise money to pay his expenses on the road ! Such was the character of the times, when a general officer received no more than four times the pay of a private soldier ! They will however, be gratified to find, that before the arrival of Thimbron, Xenophon made a capture, in the plain of *Pergamus*, which not only rendered his circumstances easy ; but “ enabled him to oblige a friend.” (Lib. VII. c. 61).

\* Lib. VII. c. 22. Nothing can shew the striking difference between the customs of ancient and modern times, more than the fact of a captain having only double the pay of the private soldier ; and the general only four times the pay of the private. The proportions in the regular service of Greece, appear to have been precisely the same.

## CHAPTER XVI.

CONCERNING THE NUMBERS OF THE GRECIAN AUXILIARIES,  
EMPLOYED IN THE EXPEDITION: AND WHAT PROPORTION  
OF THEM, FINALLY REMAINED. ALSO CONCERNING THE  
DATES OF THE EVENTS AND TRANSACTIONS.

---

*The Numbers of the Grecian Auxiliaries appear to have been corrupted, in certain places, in the copies of the Anabasis—About two thirds of the original number reach the place of Embarkation, at the conclusion of the Retreat; but not much more than half remained, when they joined Thimbron—The Seasons in which the events took place, collected from the several circumstances of*  
1. *The low state of the Euphrates, when they crossed it at Thapsacus; 2. the ripening of the dates, whilst in the Babylonian villages; 3. the coming on of the severe weather of the first winter, in Armenia; and of the second in Thrace—The Expedition and Retreat employed full two years—Supposed dates of the principal transactions.*

CONCLUSION.—*Some Remarks on the foregoing History—Much to be learnt from it, by every description of Persons—No Recital so well calculated to inspire Confidence in our own Resources.*

SINCE the numbers of the Grecian Auxiliaries, as they stand in the copies of the *Anabasis*, at different periods of the

expedition and retreat, are, in some cases, evidently erroneous; it may be proper to say a word, here, in addition to what has been already said in the course of the Enquiry.

It has appeared in page 111, that the numbers at the review, before the battle of *Cunaxa*, were 10,400 heavy-armed men, and 2400 light-armed: total 12,800.\*

No enumeration took place between that and *Cerazunt*: but the numbers are given by *computation*, at the ascent of the *Colchian* mountains. And the last statement of the numbers, is on occasion of the separation of the army at *Heraclea*.

At the *Colchian* frontier, when drawn up in columns, for the attack of the mountain, Xenophon says (Lib. IV. c. 45), "they amounted to about 80 companies of heavy-armed; each of which consisted of nearly 100 men; the targeteers and archers were divided into three bodies of nearly 600 each."—Hence the heavy-armed may perhaps be taken at 7700, at least; and the light-armed at nearly 1800: Total 9500.

At *Cerazunt* (Lib. V. c. 11), the *total* number was said to be 8600. And Xenophon adds, "These were all that were saved, out of about Ten Thousand: the rest were destroyed by the enemy, and by the snow: and some by sickness."†

\* Diodorus reckons the Greeks roundly at 13,000 (Lib. XIV.), which has a near agreement with this statement. The numbers given at the outset of the expedition, in the *Anabasis* are therefore probably wrong. (See above, page 25.)

The principal part of the men who composed this army; at least of the heavy armed, were *Peloponnesians*. Xenophon says, Lib. VI. c. 12, "It was true that the *Arcadians* and *Achaians* made above half of the army." Of the remains of the army, at *Heraclea*, 4500 out of 8640, were either *Arcadians* or *Achaians*.

† It may be supposed from Xenophon's manner of speaking, that a great number perished in the snow.

Three hundred and sixty had deserted to the Persians, in *Babylonia*, &c. and of these 340 were *Thracians*.

M. Larcher translates 8600 *heavy-armed*: on a supposition that this enumeration did not include the light armed. But Mr. Spelman translates "*soldiers*;" meaning, (it may be supposed) the bulk of the army. And as the number of heavy-armed, at the Colchian mountains, *appeared* to Xenophon (Lib. IV. c. 45), to be *about* 80 companies of nearly 100 men each; perhaps 7700; there could not of course be 8600 of that description, at *Cerazunt*.

Moreover, it will be found, that the numbers at *Heraclea*, agree perfectly with those at *Cerazunt*, the *total* being the same: whilst the two classes of heavy and light are distinguished; and prove incontestibly, that the light armed were included in the total of 8600 at *Cerazunt*. \* For at *Heraclea*, the heavy-armed were only 7600; and the light armed 1000. Now the interval of time between the two, was only about 10 weeks; in which time no hostility had occurred excepting some trifling matters with the *Paphlagonians* at *Cotyora*, &c.

But the diminution of the light armed, between the ascent of the *Colchian* mountains, and *Heraclea*, is very considerable. At the former, Xenophon reckoned three bodies of nearly 600 each, or a total of about 1800; but at *Heraclea*, 1000 only are found: and, no doubt, the number was the same at *Cerazunt*; since the totals agree. So that the great loss on the part of these troops, must have been *chiefly* during the predatory expeditions, for provisions and necessities, at Trebisonde, during a whole month; and in some degree amongst the hostile tribe of *Mosynæcians*. For it may be seen, that the light troops were constantly exposed; and accordingly suffered in proportion: there being 7600, out of 10,400 heavy-armed, remaining;

or about *three-fourths* of the whole: but of the light-armed 1000 only, out of 2400; or little more than *two-fifths*.

The losses suffered in *Bithynia*, which were equal to 1400, reduced the Greeks to about 7200, at their arrival at *Byzantium*: or perhaps, allowing for natural deaths and accidents, there might have been 7100 passed over from Asia. This calculation is borne out by a remark of Xenophon's, when he says (Lib. VII. c. 54), that Seuthes, by a just mode of conduct towards the Greeks, "might be praised by *six thousand* men." This was at the close of the Thracian campaign; in which none of the Greeks were either killed or taken prisoners (c. 48): and if we deduct from 7100 men, (the supposed number that crossed over from *Chrysopolis*,) the 800 withdrawn by Neon, and the 400 sold for slaves by the *unfeeling* governor of *Byzantium*, (a *Lacedæmonian*; c. 16, and 18,) the number serving with Seuthes, would be 5900: which would justify the expression of Xenophon; who, of course, on such an occasion, would speak only of a round number. It may also be concluded that, if the corps of Neon rejoined him, together with such of the slaves as could be redeemed,\* Xenophon would have carried between 6700 and 7000 men, to Thimbron.

The seasons in which the foregoing events took place, are only to be collected from circumstances; there being no positive information concerning them: save only that the campaign with Seuthes, is said to have been made during the depth of winter. There are, however, three other circumstances, by which, collectively, one may arrive at some degree of certainty, concerning the seasons: but none that will fix

\* But of these, nothing is said.

the time with exactness. And, notwithstanding the additional information, respecting the campaign with Seuthes, yet the interval between it and the former transactions, is too loosely given, to afford the means of connecting them together.

The fording of the Euphrates at *Thapsacus* is represented as an unusual circumstance, by the inhabitants of that place ; and proves, (if that report be true,) that it must have been at a season, when the river, which has periodical changes, was unusually low ; or that the season itself had been a remarkably dry one.

The description of the fruit of the palm, or date trees, in Mesopotamia, shews that the dates had been recently gathered. And,

The severity of the weather in *Armenia*, shews that it must have been in the depth of winter (the one preceding the campaign with Seuthes), that the Greeks were there. We shall accordingly discuss these three points, and afterwards compare the results, with the intervals of time between.

1. It is known that the Euphrates (as well as the Tigris), has a periodical swelling, and that to a considerable height, in spring, and part of summer ; but whether, like the Tigris, it also swells in some considerable degree, with the winter rains (in January, according to M. Niebuhr) is unknown to the author. And hence a doubt may arise, whether it may be lowest after the full subsidence of the flood in summer, or after that of the winter ; if such there be.\* Now the Ganges, and most

\* The notices respecting the season, and the height of the swelling of the Euphrates, are not given, on the same authority, as those respecting the Tigris. For certain European residents, on the banks of the latter (at Baghdad) have observed and reported them : but as there have been no such residents near the Euphrates, the information is

other tropical rivers, have one regular period of swelling in summer; and after they begin to fall, although the decrease be, out of all proportion, the most rapid, in the early part of it; yet they do continue to fall, although in small degrees, until the period of swelling returns.\*

But there is the most positive information concerning the *low state* of the Euphrates, in August and September, whatsoever may happen between that and April; which is the season of its beginning to swell; and which swelling continues till late in June: from which time, it falls again, very rapidly. For M. Thevenot says, that at Beer, it filled only *half* its bed, in the beginning of July, O. S. And from Dr. Pocock we learn, that in the middle of September, O. S. at the same place, it occupied only *one third part* of the breadth of its bed: for that bed was 630 yards over, from bank to bank; and of this space, only the breadth of 214 yards was covered. It was said to have been near its *lowest pitch*, at that time.

Mr. Drummond was at Beer, the 25th August (O. S.); and he says, (page 205) that "the Euphrates has *two sets* of "banks, one for summer, and one for winter: these last "being *full half a mile* wider than the other." Although his guess concerning the width of the river bed, was a very bad one, as appears from Dr. Pocock's admeasurement, yet it may clearly be understood that the river was very far retired within its bed; and consequently may be supposed to have been near its lowest state. It may here be remarked, by the bye, that

derived from casual sources, alone. However, there appears to be little doubt, that the Euphrates begins to swell in April, and is at its height in June.

\* The fall of the Ganges, in particular, is very rapid, when it begins to take place; so that about two-thirds of the whole perpendicular fall, takes place during the first 10 or 11 weeks: but it continues to fall for six months longer.

the *guesses* of *ordinary* travellers, respecting the breadth of rivers, lakes, and inlets of the sea, are generally too vague to merit any kind of attention.

Mr. Eldred, who navigated the Euphrates in 1583, (see Hakluyt's Collection of Voyages, Vol. II.) says, that it is at its lowest in July, August, and September: that is to say, it begins to be *very low* before the *middle* of July, (or allowing for the difference of style, the latter end of July): and continues so, during the remainder of that month, August, and September. This, of course, applies only to the state of the river, in respect of its navigation, without any reference to the period of its attaining its lowest pitch; which might therefore be in September, as M. Thevenot reports. It is probable, however, that, like other rivers, subject to periodical swellings, it may continue to fall till the season of swelling returned: although the difference would escape a casual observer. Both Eldred and Thevenot's testimonies prove, that the subsidence of the river is very sudden: and the marked difference between its state in July, and in September, shews that it had decreased very considerably during that interval: and probably from the latter period, its decrease may have been very inconsiderable.

It may therefore, be admitted, that in August and September, the Euphrates is in a *very low* state: and might have been no more than *breast-high* at a particular ford, as it was said to have been at *Thapsacus*: and although this circumstance affords no authority for fixing the date of the transaction in question, yet it may be allowed to furnish a strong presumptive proof, that it could not well have taken place, *earlier* than August.

2. The season of the ripening of the *date* fruit in *Babylonia* and *Mesopotamia*. Xenophon's description of the dates (Lib.

II. c. 10), and of the œconomy of the inhabitants respecting them, seems to shew that the dates had been recently gathered. "These dates (says he) had in all respects the appearance of "amber. Some of them they *dried* for sweetmeats."

Kæmpfer says, that the dates ripen in *Persia* in August; and another author says, that in Upper *Ægypt*, they ripen in September. According to the new style, Kæmpfer's period may be extended to the first week in September.

3. The coming on of the heavy snows in Armenia, amongst which, they continued 23 days. To reason from analogy, this might be expected to have taken place, about the middle of December.

We shall now endeavour, from a combination of these circumstances, to establish a chronological point, by which the several events of the history may be regulated; though in a very general way.

It appears from the history (see the table of marches and halts, prefixed) that the Greeks, partly in company with Cyrus, partly by themselves, employed 36 days between *Thapsacus*, and the villages in which they quartered after the battle of *Cunaxa*, and the truce that followed it:\* and that from their coming to these villages, to the first fall of snow in Western Armenia, they employed 87 days more: in all, 123 days, or just about 4 calendar months, between the fording of the Euphrates, and the first fall of snow, in the plains of Armenia. It cannot well be supposed, after what has appeared from Thevenot, that the Euphrates, could have fallen

\* This is on the supposition that two articles are transposed in the original: according to which, there would have been 42 days instead of 36, between *Thapsacus* and the truce villages.

so remarkably low, as to have been fordable, contrary to the belief of the people of *Thapsacus*, at an earlier period than the middle of August, (N. S.) or thereabouts : and if this be supposed, the 4 months will bring the time of the first fall of snow, to the middle of December ; and that of the arrival of the Greeks at the truce villages, where the date fruit appears to have been recently gathered, to the third week in September ; which is a full fortnight beyond the *latest* period allowed by Kæmpfer, for the *ripening* of the dates. In respect of the snow, as none appears to have been found on the elevated plains of Armenia, on their arrival there ; or even on the more elevated region of the *Carduchians* ; it may be presumed that the snow seen by them, was the first that fell, in any quantity, in that season ; as it does not quickly melt there. And the middle of December does not seem an improbable time for this to have happened.\*

It is certain however, that the season of the ripening of the dates, ought to be regarded as by far the most regular and certain of the three events : and if the Greeks arrived during or immediately after, the time of the gathering, it would point to a somewhat earlier period, for the fording of the Euphrates, at *Thapsacus* ; and of course, for the falling of the snow in Armenia ; than has been stated above. But one cannot suppose, at all events, a difference of more than a fortnight ; and

\* Twelve or thirteen days before the first snow mentioned by Xenophon, and whilst on the summits of the *Carduchian* mountains, it was said to "*rain violently*," whence it may be inferred that the season of snow had not commenced. (Lib. IV. c. 7.)

It is true that Mr. Sullivan saw snow lying on the summits of these mountains in June ; but it is well known that on some mountains, the snow is not all melted till autumn ; although they may be quite clear, at the beginning of winter. Certain of the passages across *Hindoo-Kbo*, (or the *Indian Caucasus*), are not clear enough for travelling till August.

without meaning to appear exact, in a matter that is not susceptible of exactness, but in which the circumstance of the ripening of the dates, ought to preponderate; we shall assume a particular day, for each transaction or event, merely for the convenience of the reader, in comparing one interval of time with another.

It is proper to mention, that the aggregate sum of the time, between the battle of *Cunaxa*, and the arrival of the army at *Cotyora*, given by Xenophon, roundly, at 8 months; is found to be only about 7 months and a week, by the detail. If he really wrote 8 months, then there is, of course, a deficiency of three weeks; and which it is not possible to supply. We shall therefore proceed according to the detail, in the first instance, and on a supposition of their arriving in the villages *immediately after the time of gathering the dates*; and afterwards state the differences between the two reports.

Assuming then, the 10th of September for the day of their arrival at the villages, where they saw the dates, which seem to have been recently gathered; the battle of *Cunaxa*, which was fought three days before, must have happened on the 7th September. The fording of the Euphrates at *Thapsacus*, which was 36 days before their arrival at the villages, should have been on the 5th of August: and the commencement of the transactions in the *Anabasis*; that is, the day on which Cyrus left *Sardis*, should have been the 6th of March; or only one day more than six months, previous to the battle. But Xenophon remarks at the end of the work, that the whole expedition and retreat, took up a year and three months: and as he also observes when at *Cotyora*, (which he reckons the term of the retreat), that they had consumed 8 months, in their

retreat, from the field of battle in Babylonia to *Cotyora*; no less than 7 months must have been employed between the commencement of the expedition, which was at *Ephesus*, (Lib. II. c. 5), and the battle: and of course nearly a whole month must have been employed at *Sardis*, and on the march to it, from *Ephesus*. So that the commencement of the expedition, at *Ephesus*, may be reckoned to have taken place on the 7th of February, B. C. 401.

The detail giving, as we have before remarked, 87 days, from the time of arriving at the truce villages, to the first snow: places the latter event, on the 6th of December. Again, the same detail giving 69 days from the first snow to Trebisonde, fixes the arrival at that place to the 13th of February, B. C. 400.

The time between Trebisonde and *Cotyora*, is incompletely given; but, with the month spent at Trebisonde, and 10 days at Cerazunt, may be taken roundly at two months.

It has been remarked above, that Xenophon states the interval of time between the battle of Cunaxa and the arrival at *Cotyora*, at eight months; and that the detail falls short by about 3 weeks. For, as the arrival at Trebisonde is here fixed to the 13th of February; and that at *Cotyora* two months later, or to the 13th of April; whilst the battle is supposed to have been fought on the 7th September, it is evident that the interval of time, is short of 8 months, by 3 weeks: as also, that following Xenophon's account, the arrival at *Cotyora*, should be the 7th of May. One cannot hesitate to adopt Xenophon's time, in the aggregate; because it is probable that the length of the interval of time employed, during the retreat, was strongly impressed on his mind: so that it was always

present with him, although he might be unable to recollect the whole detail. And it is possible also, that his detail may have originally agreed with the aggregate, but has since been corrupted. One cannot suppose that he would palpably contradict himself.

Between *Cotyora* and *Chrysopolis* (at the *Bosphorus*), the time employed by the way, may easily be collected; but the length of their stay at *Heraclea*, any more than at *Calpé*, can only be guessed by circumstances. At the port of *Sinope* they staid 5 days. If the whole of their stay at *Heraclea* and *Calpé*, was equal to 18 or 20 days (and less can hardly be supposed), the whole time from their arrival at *Cotyora*, to their arrival at *Chrysopolis*, adding the 45 days sojourn at the former, may be taken at three months: and then their arrival at *Chrysopolis* would be about the 7th of August, according to the aggregate given by Xenophon.

As Xenophon says (Lib. VII. c. 48), that whilst the army was encamped in the open field, under the walls of *Perinthus*, it was "in the heart of winter," one cannot refer this expression to an earlier period than far on, in the month of December. It was immediately after this, that they joined Seuthes; very soon after which, we hear of the very severe cold, when the wine as well as the water was frozen in the vessels. And this may therefore have been about, or rather after, Christmas. So that the Greeks must have staid either at *Chrysopolis*, or in the neighbourhood of *Byzantium* or *Perinthus*, from the middle of August to the middle of December. With Seuthes they were two complete months; and it is said to have been in winter: which it no doubt was: probably from the middle of December, to the middle of February.

It may be supposed, that after their engagement to serve with the Lacedæmonians, they lost no time in passing over into Asia. Dr. Forster supposes them to have been incorporated with the troops, under Thimbron, in March; which appears probable. So that the whole interval of time, between the departure of the expedition from *Sardis*, and the return of the remains of the army, to that neighbourhood (*Parthenium*), was full two years: in which the numbers were diminished about one half.

The following table is calculated, on the above supposition, that the Greeks forded the Euphrates, at *Thapsacus*, on the 5th of August; of their arrival at the truce villages, on the 10th of September; and of having the first snow in Armenia, on the 6th December.

The detail of the time, in the *Anabasis*, is the only guide to the comparative dates, until the arrival at *Cotyora*; when they are checked, by the interval of 8 months from the battle of *Cunaxa*; it being impossible to find out where the omissions lie; and what proportion of them were before, and what after the arrival at Trebisonde. Probably, the difference may be owing to the omission of days of halting, in the course of the detail.

Although in the arrangement of the following table, the gathering of the date fruit has chiefly determined the point of time, yet it is not improbable, that the Greeks may have arrived at the villages, at a period somewhat later; because the low state of the Euphrates, and the falling of the first heavy snows, would have been expected to happen rather later, than the point of time deduced from the gathering of the date fruit. It is evident, however, that of the three circumstances, that

respecting the date fruit, is the one that claims the chief regard, as being the most regular, in point of season.

	As they left <i>Ephesus</i> 7 months before the battle, their departure may be reckoned to be about the	7th Feb.	B. C. 401
Days	Left <i>Sardis</i> about	6th March	
20	Arrive at <i>Celænæ</i>	20th —	
5	— <i>Caystrus</i>	1st May	
20	— <i>Tarsus</i>	6th June	
7	— <i>Myriandrus</i>	6th July	
5	Ford the Euphrates at <i>Thapsacus</i>	5th August	
—	At the <i>Pylæ</i>	1st Sept.	
—	Battle of <i>Cunaxa</i>	7th —	
26	Arrive at the <i>Truce</i> Villages	10th —	
—	At <i>Sitace</i>	11th Oct.	
3	Massacre at the <i>Zabatus</i>	29th —	
—	Ascend the <i>Carduchian</i> mountains	20th Nov.	
—	First snow in <i>Armenia</i>	6th Dec.	
—	Crossed the <i>Eastern</i> Euphrates	13th —	
8	Arrive at the Villages of Refreshment	18th —	
—	— the <i>Harpasus</i> river	19th Jan.	400
30	— <i>Trebisonde</i>	13th Feb.	According to Xenophon
45	— <i>Cotyora</i>	13th April	7th May
—	— <i>Heraclea</i>	—	1st July
—	— <i>Chrysopolis</i> and the <i>Bosphorus</i>	—	7th August
—	Join <i>Seuthes</i>	—	5th Dec.
—	* — <i>Thimbron</i>	—	5th March
			399

\* Dr. Forster supposes the following dates, p. 334 :

Battle of <i>Cunaxa</i>	-	At the latter end of September	B. C. 401.
In the snows of <i>Armenia</i>	-	Beginning of January	400.
Arrival at <i>Trebisonde</i>	-	Towards the end of February.	
Arrival at <i>Cotyora</i>	-	Beginning of June.	
Left <i>Cotyora</i>	-	Latter end of July.	
Joined <i>Seuthes</i>	-	End of November.	
— <i>Thimbron</i>	-	In March	399.

## CONCLUSION.

The Author has now, to the best of his ability, completed his plan; which had for its object, a critical examination of the Geography of the EXPEDITION of CYRUS the Younger, and the RETREAT of the TEN THOUSAND GREEKS; through those parts of their route, which stood the most in need of that kind of illustration. It must be acknowledged, that the first four books of the ANABASIS, contain the most interesting part of the whole: for although much information, and that of various kinds also, is contained in the three last books, yet the transactions are not of a character to interest so deeply; or to rise so high in our estimation. And perhaps the work might have been thought no less perfect, as a piece of history, (and doubtless much more dignified), had it terminated with the arrival of the Greeks at Trebisonde; and the remainder made a portion of general history. For one cannot but be disgusted, at finding those, who had so long figured as heroes, in the former part of the history, degenerated into pirates and buccaneers, towards the conclusion.

Of all the records of human actions, that have travelled down to us, this appears to be, on the whole, the best fitted to inspire confidence in our own resources. It ought therefore to be more particularly studied by military men; as containing many important lessons, as well of tactics, as of policy. The statesman will have impressed on his mind, the importance of a proper choice of commanders: such as may inspire confidence, rather than terror; and induce a pride of obedience, that rises superior to the frowardness of self-will; or

the impatience of bodily sufferings. By such men, discipline may be enforced, even in those ranks, where a spirit of liberty prevails, to the utmost extent ; as amongst the Spartans and Athenians, of whom we have been speaking. A commander may also learn, from the unaffected details of Xenophon, to place his own transactions before the public eye, in a clear point of view : and in the recital of his own acts, to do himself ample justice, without offending the delicacy of his readers. But even the reader, who is neither a military man, nor a statesman, may find in the *Anabasis*, not only much rational amusement, but many lessons useful in common life. Moreover, we learn from this, and a few other instances, out of the ordinary course of events, what may be accomplished by exertion, aided by consummate wisdom and undaunted courage. The long continued struggle of the Greeks, with difficulties of every kind, stamps a degree of fame on their characters, superior to all that we meet with in history. Much fame is built on the trial of a single day : but in this case, the endurance of bodily sufferings, and privations, super-added to personal dangers, was such, as to exercise their patience and fortitude, not only for days, but for months ; and these as constantly stood the trial.\*

\* We regard the courage and perseverance of our countryman, CAPTAIN, now ADMIRAL, WILLIAM BLIGH, and his boat's crew, as one of those remarkable instances.

Driven by mutineers from the command of his Majesty's ship *BOUNTY*, when in the Pacific Ocean, in 1789 ; he, with 17 others of the crew, was committed to an open boat, 23 feet in length ; with a quantity of provisions equal only to about 9 days ordinary allowance, for that number of people (18 in all) ; and with water for little more than 3 days : but what proved of the utmost importance in the sequel, 8 bottles of wine and rum. With this *modicum* of provisions, he daringly undertook to conduct them to the Molucca Islands, *three thousand six hundred miles* distant (which is 500 miles

more than the breadth of the Atlantic Ocean, between Portugal and Virginia), in the hopes of reaching their native country from thence. Of this distance, 2600 miles lay through the vast Pacific Ocean; the waves of which, during the frequent stormy weather, often curled over their heads, and threatened them with instant destruction. At the end of 48 days, they arrived at the island of Timor, having still remaining in store, 11 days provisions; which the PROVIDENT ATTENTION, the RESOLUTE DISCIPLINE, and the PATIENT EXAMPLE of the Commander, had induced them to reserve; that in the event of their missing Timor, they might be enabled to reach Batavia.

---

\* \* \* The distresses of the Greeks, from the time of the massacre of their Generals, to their arrival at Trebisonde, continued about 106 days.

## APPENDIX.

A PROPOSAL FOR THE IMPROVEMENT OF THE GEOGRAPHY OF THE ROUTE OF THE TEN THOUSAND, BY ENQUIRIES ON THE SPOT, CONCERNING THE POSITIONS OF CERTAIN PROMINENT POINTS : AND IN COMMON WITH IT, THAT OF ALEXANDER, THROUGH THE SAME COUNTRIES : THE WHOLE OF WHICH ENQUIRIES WILL BE EQUALLY APPLICABLE TO THE IMPROVEMENT OF MODERN GEOGRAPHY.

---

## PART I.

*The Improvement of the Geography of the foregoing Route, might easily be accomplished, by the aid of Europeans, who travel on the score of curiosity in Asia—The benefit would extend to General Geography, at large : Modern as well as Ancient—The task to be divided amongst several travellers—Great simplicity of the process required—Observations are often neglected through diffidence of ability to make them—Enumeration of the principal positions which require correction ; with hints for the mode of proceeding—Asia Minor—Sinus Issicus—Syrian and Cilician Passes—Myriandrus—Course of the Euphrates—Field of Cunaxa—Median Wall—Sitace—Opis—River Tigris—Zabatus—Over-hanging Cliffs—Carduchian Mountains—*

Centrites and Teleboas Rivers—Eastern Euphrates—Kha-noos—Villages of Refreshment—Harpasus, Gymnias, and Mount Theches, or Teke—Tumulus of Stones—Trebisonde.

## • PART II.

*Concerning the modes of taking the direction of the route ; and of computing the distances—Substitute for the Magnetic Compass, when the latter cannot be conveniently used—Mode of using the Substitute—Examples—Modes of computing distances—Itinerary Measures, in Turkey, Persia, &c.—Remarks.*

1. **I**N this enterprising age of discovery, in which so many generous spirits have not only relinquished their comforts and their ease ; but have actually perished, in the attempt to add to the general stock of knowledge ; one may hope, or even expect, that some will be induced to try the experiment of improving the geography of the routes of Cyrus and of Xenophon ; in such parts as are at present the least known, or have been the least subjected to geographical arrangement. There can be little doubt, but that it may be greatly improved, by a diligent and careful attention to the objects around them. Moreover, the improvement of modern geography will be going on, at the same time with that of the ancient.\*

In the expectation that such may be the event, the author has judged, that a portion of his time may not be ill employed

\* And since Cyrus and Alexander passed at times over the same ground ; and at other times, very nearly over the same ; some particulars relating to the route of the latter, may doubtless be collected : as in *Cilicia*, and at the *Tigris*, &c.

in offering his sentiments on the most promising mode of pursuing the enquiry.

It may first be proper to state, that much valuable matter for the improvement of general geography may be collected, without any great exertion ; and by persons who possess the most moderate portion of mathematical knowledge ; and moreover with a very few portable instruments : that is to say, a pocket sextant, with an artificial horizon, and a small pocket compass. A watch, every traveller is provided with ; but in this case, it ought to be a good one ; as much will depend on knowing the exact time of day. Observations for the longitude are quite out of the question here.

It is probable, that it arises from a mistaken idea, that much previous knowledge is required, in order to be able to collect materials for geography ; that so few persons have attempted it. But a qualification is very easily obtained.

It happens that the points which require correction, are so numerous, and withal so widely dispersed, that it could not be expected, that any one person, whatsoever talents, leisure, and facilities, he might possess, would be equal to the task of examining the whole. Therefore, different travellers might confine their enquiries and examinations to such different parts of the route, as fell within the limits which they had prescribed for their respective tours. Thus, to supply what was wanting in *Asia Minor*, might be a sufficient task for one traveller ; a second might trace the general course of the Euphrates ; and a third might endeavour to fix certain critical points, or stations, along the Tigris ; as *Opis*, and the *over-hanging cliffs* : or even to trace the general course of the river itself. Others might examine the tract between the supposed position of

*Gymnias* and *Trebisonde*; as also the line of the route from the quarter of *Bedlis* (or from the northern foot of the *Kourdistan* mountains, that is the *Carduchian*); to that of *Khanoos*; and to the *Euphrates*, in the line towards *Yezidkoi*, and *Koban-kupri*.

The different objects which are required, for the illustration of the geography of the *Anabasis*, will be given here, in regular succession, as they occur, in the course of the history; as this mode appears to afford the easiest means of reference; and to be the most favourable to the memory. But the enquirer, it is hoped, will not lose sight of the subject of the general geography at large; which is still so deplorably deficient, in that part of the world. For although he may fail in obtaining satisfaction, respecting the subject of the *Anabasis*; yet the result of every enquiry directed towards it, will infallibly produce materials for the improvement of general geography, both ancient and modern: so that it is barely possible that his time and labour should be lost.

The *outset*, through *Asia Minor*, requires more particularly, an attention to the positions of *Celænæ*, *Peltæ*, *Caystrus*, and *Tyana*: for although these may be received at present, as assumed positions, of sufficient authority to mark the progress of the armies, in a general way; yet they want the exactness required for systematic geography, even of the most general kind; *Peltæ* and *Tyana* in particular. As for the rest, as *Sardis*, *Colossæ*, the *Kramians*, *Iconium*, *Tarsus*, and *Issus*; these perhaps may be regarded as fixed, in the view of general geography; at least, according to the mode in which any large portion of the Turkish empire, is likely ever to be done.

The whole route from *Tyana* to *Tarsus*, should be noted, in

respect of the *direction of its course*, and the distribution of the intervening objects; particularly the pass over Mount *Taurus* (commonly called, by the ancients, the pass of *Cilicia*), near *Tyana*; and the towns and villages now in existence. Enquiries should also be made, respecting the sites of those recorded in the ancient itineraries; amongst which, the one answering to *Podandus* (*Bodando*) is said to be still existing. The quality of the country should also be described; and in effect, every particular should be noted, that would enable the traveller to compare the ground with the description in *Xenophon*; and with the ancient itineraries: that named from *Jerusalem* more particularly.

The best guide to *Tyana*, is perhaps the village of *Anabil* or *Enabil*, situated in the road from *Kisariah* and *Develi-Karahissar*, to *Tarsus*; and at 6 hours travelling (of caravans) to the south-east of *Karahissar*. *Anabil* is presumed to be the *Andabalis* and *Andavilis* of the itineraries: and which was 16 Roman miles short of *Tyana*, in the way from *Archelais Colonia*, (which is supposed to have stood on, or near, the site of the present *Akserai*), to *Tarsus*. The traveller would do well to study the position and direction of this Roman road, as well as the modern ones in the same quarter; in order to be a perfect master of the nature of the communications, on which the movements of *Alexander*, as well as of *Cyrus* and *Xenophon*, are to owe their developement.\*

The gulf of *Issus*, or *Scanderoone*, furnishes so many

\* Enquiries might also be made, whether the names of *Tymbrium*, *Tyriaum*, *Philomelium*, and the *Camp of Cyrus*, at *Tyana*, are still known, in those countries; as also concerning the Roman Roads; and particularly that between *Dorylæum* and *Philomelium*.

important heads of enquiry, as would amply repay a deliberate survey of its whole extent: but at all events, the whole of its eastern coast; together with the two bays in which it terminates, on the north and south; and the outlines of the *bases* of the adjacent mountains; should be carefully examined: for on the knowledge of certain particulars, in this part, a right understanding and discrimination of the passes, so famous in the history of Alexander, and of the younger Cyrus, will be obtained. And this knowledge appears not only to be wanting at present, but to have been wanting amongst the Greeks and Romans, even at no long interval after the date of the transactions themselves.

The result of such an enquiry would probably be a more satisfactory proof of the site of *Issus*; of the river *Pinarus*, which was near it; of the ground which formed the *two maritime* passes (the one on the sea-shore, mentioned by Xenophon; and that on the ascent, by Arrian); the ancient coast of the bay of *Myriandrus*, now filled up with alluvions; together with the site of the city itself: and finally, the upper pass of *Amanus*, by which Darius advanced to *Issus*, whilst Alexander was seeking him on the side of *Syria*. (See above, page 38, *et seq.*)

Perhaps the best mode of pursuing this enquiry with effect, will be, first to seek the ruins of a gate, and a causeway leading from it, supposed to have been a street of the city of *Castabala*,\* (the *Catabolo* of the itinerary) situated at the northern

\* *Castabala* appears in Q. Curtius, on the route of Alexander. The *causeway*, as it is reckoned, is probably the pavement of a street of the city. The same circumstances occur in several other sites of cities, in the east; where they pass for causeways.

extremity of the gulf of *Issus*, or Scanderoone. The gate is now named Demir-kapi.

From thence, southward, *Baiæ* (now Bayas) was 17 Roman miles :\* but *Issus*, and the river *Pinarus*, must have been short of Bayas ; the former (supposed to have stood on the site of the present village of *Oseler*, called also *Karabolat*) about 6 or 7, and the latter 3 or 4 miles. It would be proper however, to note every rivulet of any size, together with its name, position, and direction.

The stream called *Deli-sou*, taken by the author, for the *Pinarus*, lies about midway between *Oseler* and Bayas ; but nearest to the former. As the field of *Issus* is supposed to have been divided by this river, as being the only ground that suits the description given by Arrian, the observer cannot be too exact, in every particular relating to it. The course of the river should be traced, at least to the place where it issues from the mountains (*Amanus*) ; and it should be observed, whether in its passage through the opening, it does not form a deep bend towards the north, along a kind of bay or recess in the mountains ; by which, those who stood at the remote part of the bay, on the northern bank, could see the backs of those who were drawn up, on the opposite bank : for this is Arrian's description of this part of the field. The width of the plain should also be carefully noted, between the parallels of *Oseler* and Bayas. And although it is not very probable, that any remains of the altars erected by Alexander, on the northern bank of the *Pinarus*, should be visible at this day ; yet as Cicero saw, and remarked them, it is possible that there may

\* The distance appears to be under-rated. It is 17 in one itinerary ; 16 in the other : and named *Baiæ* in one ; *Bais* in the other.

yet be the remains of the foundations : and the space to be examined is not extensive.

It is suspected that the *upper* pass of *Amanus*, by which Darius came to *Issus*, whilst Alexander was at *Myriandrus*, lay through the same gap, by which the *Pinarus* river, issues from Mount *Amanus*. Some information respecting such a passage, may possibly be obtained, either at Bayas, or at Oseler.

The pass on the sea-shore, called by Xenophon, the gates of *Syria* and *Cilicia*, was situated at the distance of an ordinary march southward from *Issus* : probably about 14 British miles : and at about 7 (in the same direction) from Bayas. Here, the observer may perhaps take the small river *Mahersy* (supposed to be the *Kersus* of Xenophon) for his guide ; as this latter ran through the fortifications of the pass, situated on the low ground adjacent to the beach. Here it must be recollected, that a wide space of morassy ground has been formed, adjacent to the ground of the pass ; and as Xenophon says that the ground within the pass, was formed of *inaccessible cliffs*, this particular should also be attended to, as furnishing a mark for ascertaining the position of the ancient pass.

A little way to the south of the Mahersy river, the hills encroach on the sea : and here it is conceived was the pass described by Arrian, to have been possessed by Alexander's troops, on the morning preceding the battle of *Issus*. Certain ruins, named Jonas's Pillars, appear to occupy the spot where the pass was situated : possibly, a part of its defences, if ever it was fortified. This ground should also be examined, in order to ascertain what the nature of the impediment was, which constituted the pass, spoken of by Arrian. He only

says that the troops were confined to a very narrow front ; and descended from a hill.

The site of *Myriandrus*, and the trace of the shore of its ancient bay and port, next claim attention. Since it was situated at the distance of a day's march southward from the *maritime* strait, according to Xenophon and Arrian, whilst the southern termination of the gulf of Issus, is no more than about 6 or 7 miles from that strait, it is evident that the S. E. angle of the gulf, in which the bay and port of *Myriandrus* were situated, must have been filled up by matter lodged there ; partly by the sea currents, partly by the land floods, from the mountains of *Amanus* and *Pieria*. The boggy nature of the soil there, plainly indicates such a change ; which is moreover corroborated, not only by tradition, but by the visible extension of the land, and the consequent removal of the habitations, at Scanderoone, at the present day. (See above, page 55.)

There are said to be ruins, near a spring named Jacob's well, several miles inland, and to the southward of Scanderoone (or *Alexandria*) ; and near the great road leading from the latter, to the inland pass of Bylan. Here one would look for the site of *Myriandrus* : but it may be difficult to trace the ancient sea-coast ; because the level of the newly-formed land, must necessarily have been raised, by constant accessions of matter from the hills : so as to obliterate the margin of the ancient sea-coast.

It would, however, be curious to examine the state of Godfrey of Boulogne's castle, situated on the new land ; in order to compare its height from the *present level*, with that reported by Mr. Drummond about 60 years ago.

It has been mentioned, page 65, *et seq.* that Xenophon has

taken no notice of the remarkable pass of Bylan (*Pictanus*); any more than of the rivers that ran through the plain, since denominated from *Antioch*.

The *Chalus* of Xenophon cannot be mistaken in the modern Koïk, or river of Aleppo: or the *Daradax*, in the Fountain of Fay. (See above page 65.) No information, applicable to the present inquiry, is likely to be obtained, between Fay and the place of conflux of the Khabour (*Araxes*). However, a general tracing of the Euphrates, *here*, would prove a most useful addition to geography: as the present maps are very deficient in the detail of its course: and below the conflux, the great detours of the stream, must have affected the direction and length of the line of march; since the army of Cyrus would naturally have made it their constant watering place. Consequently, a knowledge of this particular, would enable a geographer to form a better judgment of the distances marched *by the road*, within any given points in the geography: for at present nothing more is known than the distances in *direct lines*, skirting the general course of the river, from Baghdad, through Hit, Rahaba, Racca, &c.

In order to render such a *tracing* still more useful, observations of latitude should be taken, at proper points; as Baulus, Racca, Erzi, Annah, and Hit; or very near those places; as also, at some station on the Euphrates, nearest to Baghdad: with which latter place, it should be connected, by general bearings, and computed distances.

The *Pylæ* form the next point of consideration: what the nature of the object (or objects) so named by Xenophon, may be; whether it be named from defiles that shut up the road, along the river side; or from the river itself, being there pent

up by mountains or hills on both sides, from whence it is known to emerge as from a strait, into the plains of Babylon. That there are mountains, or high hills, which answer generally to this description, as well in quality, as in position, is certain: but more particulars are wanting; and which might probably be ascertained, by following the course of the Euphrates, from Hit downwards to Feluja; or to that point in its course, which approaches nearest to Baghdad.

The place of the field of battle of *Cunaxa*, appears to have been nearly about Feluja; and not far below the site of Anbar. A *hill* is described at *Cunaxa*, in the *Anabasis*; and as hills or eminences seldom occur in this part, which is composed chiefly of alluvial soil; such a one, if found here, would probable aid the research: for by calculating the marches, it would be about 17 G. miles below the outlet of the uppermost canal; 50 from the *Pylæ*; and 30 short of Baghdad. And in this position, a hill, or eminence, was actually remarked by P. Texeira, in 1605: but without any reference to the subject of the *Anabasis*.

It may be added, that the entire course of the Euphrates, in respect of its *detail*, in this quarter, being unknown, every portion of it, that could be obtained, would be an acquisition to geography. The places of the outlets of the different canals, together with their courses towards the Tigris, are equally important. And finally, it should be understood, that it is not yet known, with any degree of accuracy, how any one given point on the Euphrates is situated, with respect to another such point on the Tigris.

It would be worth the enquirer's while also to continue the

tracing of the Euphrates, as low down as Hillah;\* and afterwards to trace the bed of the *Nahr-Malka* river (or canal), from *Modain*, upwards, to the place of its former outlet from the Euphrates.† Any other remarks on the ancient beds of canals, in the narrow tract of the Isthmus, might also be useful.‡

Any person whose curiosity would lead him to the examination of the above subjects, could not find himself on the soil of *ancient Babylon* (as he would be at Hillah), without a strong desire to employ a convenient portion of his leisure, in endeavouring to trace the foundations of its walls, or the cavities which contained them; and to examine every species of its remains.§

\* Between Hillah and Basrah, there is a tracing already made, by Mr. Ives's party, in 1758.

† It is preferable to begin at Modain, because it is well known, that the canal opened into the Tigris at *Seleucia*, (which afterwards formed a part of Modain, or *the two cities*; *Seleucia* and *Ctesiphon*.) It might not be so easy to find its outlet from the Euphrates in the first instance; for as there was more than one canal, there might be a loss of time. Sir Harford Jones informed the author, that the bed of the *Nahr-Malka* was clearly to be seen, in the way from Hillah to Baghdad.

‡ Although there may possibly be no traces of the *Median Wall* to be seen above ground, yet its masonry being cemented with bitumen, part of the foundations may remain. In Julian's expedition, in the 4th century, the remains of it were seen, near the Euphrates. As it appears to have been built across the narrowest part of the Isthmus, one would look for the termination of it, nearly opposite to Baghdad. Our Pict's wall was in existence, previous to the time of Julian, yet its remains were visible, down to the present age.

§ Since the above was written, Mr. Rich's very interesting Memoir on the Ruins of Babylon, has appeared. As the Euphrates appears to have changed its course through those ruins; leaving them *all* on the *eastern* side, the ground between them should undergo a very strict examination, with a view to detect the course of the ancient bed of the river.

*Opis*, appears to be the *opprobrium* of ancient geography, in this quarter. It ought, by the *Anabasis*, to be looked for at about 34 G. miles in direct distance, above Baghdad, on the eastern bank of the Tigris, near the site of Akbara; 80 below Senn, taken for the *Cænæ* of Xenophon. But this depends on the position of *Sitace*, from whence it was distant 20 parasangas up the Tigris. (See above page 123, *et seq.*)

If however, there should be errors in the report of the distances in the *Anabasis*; and that *Opis* should have been much nearer to *Sitace* than the 20 parasangas; or *Sitace* itself lower down; and on the other hand, *Cænæ* much farther down than is given; Dokhala, situated at the conflux of the Lesser Deallah river, with the Tigris, *may* have been the site; and the river in question the *Physcus* of Xenophon. As it was a large and opulent city, there ought to be *remains*; unless the numerous towns built by the Mahomedans, should have required all the materials. But sepulchres may still remain. It may also be worth the enquiry and examination, whether the Tigris may not have changed its course, and left the site of *Opis* inland?

The Tigris offers, in addition to the above particulars, the points of conflux of the two rivers of the name of *Zab* (the uppermost of which, is the *Zabatus* of Xenophon);\* also the mountainous ridge of *Zaco*, and the over-hanging cliffs, so famous in this history.

The points of conflux rest at present on the authority of the Arabian geographers, and European travellers; but a tracing of the whole course of the Tigris, above Baghdad, together

\* These two rivers, called in that country the *Greater* and *Lesser ZAB*; were respectively named by the Greeks, the *Lycus* and *Caprus*.

with observations for the latitude, would prove a most valuable addition to geography, and at the same time settle these positions, satisfactorily. It would not perhaps be difficult in the execution, if traced *downwards* by boat, from Mosul to Baghdad; and from Mosul *upwards* by land.\*

The position of the over-hanging cliffs, is the most important of any, as being the term of the progress of the Greeks, along the river. The latitude of that place, would be highly useful: and that of Mosul being already known, the intermediate positions of the ridge of Zaco, and the town of Jezirah, would easily be fixed, by their respective proportions of the distance, from the extremities of the line thus obtained, by the bearing and difference of latitude. The cliffs are supposed to be about 11 G. miles above Jezirah.

On the day on which the Greeks arrived at these insurmountable cliffs, they had been compelled to dislodge the enemy from a hill, over which their road lay; or which commanded the road. Accordingly, this hill, conjointly with the cliffs in question, will infallibly mark the place of ascent of the *Carduchian* mountains.

It is possible that the passage across these mountains, in the line followed by the Greeks, is much too dangerous to be attempted by our travellers; even if it could be traced out. But there is (or was) a regular caravan route, which crosses the route of the Greeks, from west to east; and is a portion of that, leading from Diyarbekir to Wan, by way of Bedlis; a place well known from the strength and importance of its pass.

\* Since the course of the Tigris, lies so near the meridian, the distances may easily be obtained by observations of latitude, and general bearings.

A valley which is noted by Cartwright, seems to answer to that one, into which the Greeks descended, one day's march short of the eminence, situated over the river *Centrites*. (See the *Anabasis*, Lib. IV. c. 9 and 10.) This valley and eminence may possibly lead an enquirer to the pass over that river, made use of by the Greeks; as they seem then to have got into a road, that led northward, through Armenia. But if this fails, it would be most convenient to proceed to Bedlis, itself; from whence there is a great public road to Erzerum.\* It may be supposed, that the road taken by the Greeks, would, at no great distance from the *Centrites*, (which is taken to be the river of Bedlis: See above, page 201;) fall into this great road; whose direction should have been a little to the west of north. Therefore, of course, the traveller from Bedlis, northward, would soon fall into the track of the Greeks: first coming to the river called by them, *Teleboas* (the *Arsanius* of Lucullus; and recognised in the Aksou, or White River, of the present geography).† According to the distance at which they might *strike* the course of this river from Bedlis, (or from the foot of the *Carduchian* mountains, generally,) they would be prepared, where to look for the *first villages of refreshment*; which lay to the south of the Euphrates. For as Xenophon, who may be supposed to have proceeded on a northerly course, from the passage of the *Centrites*, came to the *Teleboas* in 6 marches, or perhaps 56 G. miles *direct*; whilst Lucullus, who went N. E. towards *Artaxata*, came to the same river in 4 marches; the course of it must be much northerly. An important route in M. Niebuhr's 2d volume, joined to the authority of a map, in M. Delisle's Atlas, authorises us to believe,

\* See above page 208, note †.

† See note, page 207.

that *Yezid-koi*, (or the village of the *Jesidians*) situated on the Aksou river, answers to the above village (or cluster of villages) seen by Xenophon, at three marches from the crossing place of the *Teleboas* river; 9 from the *Centrites*. (See above, page 215.)

If these villages are found, in the expected situation, it might be hoped, that a continuation of the same *northerly* course, would point out the place of Teribazus' camp, at the small pass; as well as the ford of the Euphrates, beyond it: and finally, the memorable cluster of villages, in which the Greeks were so well sheltered and recruited; as the whole appears to lie within the compass of 40 or 50 miles.

The villages of the *Jesidians* are placed, according to the route in M. Niebuhr, at 19 hours from Khanoos towards Wan; that is, of course, to the south-east. Therefore should the villages of refreshment to the *north* of the Euphrates, be found, it will not be difficult to ascertain their position, in respect of Khanoos. There is indeed a *bare possibility* that these villages may be Khanoos itself;\* but in that case Khanoos must be situated more to the northward, than the line of route of the caravan from Erzerum to Wan, which passes through Khanoos, would warrant. And moreover, the history describes a more northerly direction to the route of the Greeks, in this quarter, than can be supposed of any line that could pass through Khanoos, from the quarter of Wan and Yezid-koi, towards Erzerum.

\* Khanoos is the capital town of the district of the same name: and it appears that a *Satrape* resided in the neighbourhood of Xenophon's village. (Lib. IV. c. 24.)

In this quarter of Armenia, the villages, or hamlets, lay together in clusters, which clusters were very thinly scattered. The villages appear to have been walled; but the defence of them neglected.

Taverniere stopt at a village, or cluster of villages, named *Halicarcara*, on the northern bank of the Arash; at about 15 miles to the eastward of Comasour; where the inhabitants had subterraneous habitations, like those described by Xenophon. The weather is described by Taverniere, as being very severe, in March; the snow then lying so deep, as to prevent the caravan from moving. It is calculated that this place may be no more than 20 miles to the north-east of Xenophon's station; where the snow lay 6 feet deep, in December. *Halicarcara* itself, cannot be the place of refreshment of the Ten Thousand; as the two sites are on different sides of the Arash; (the *Phasis* of Xenophon).

In the case of finding the site of the villages of refreshment, the ford, &c. they may readily be connected with the modern geography, by means of the bridge of Koban-kupri, over the river Arash; a well-known position.

From about this point, the Greeks were at fault, in respect of their road towards Trebisonde, (owing to the loss of their guide); when, after a very long interval, they found themselves on the banks of the *Harpasus*; a river flowing from Georgia, into the Arash (or *Araxes*). That river is sufficiently known for the present purpose, under the name of Harpa-sou: but *Gymnias*, the next point recorded in the history, can only be guessed. It is supposed, from reasons given above, (in page 235, *et seq.*) to be the same with Comasour. If this idea should obtain credit enough, with any traveller, to adopt it, by way of experiment, he would of course trace the road thence to Trebisonde. After a journey, equal to 5 marches, (probably long ones, as the Greeks may be supposed to have, at that time, recovered their spirits, and to be full of hopes),

he might expect to arrive, according to the history, at the summit of a high mountain, from whence the sea was visible; and which prospect occasioned such tumultuous joy in the hearts of the long-suffering Greeks. This mountain, as we have seen, was named *Theches*, and appears to have been a part of the lofty ridge, named at present *Teke*, and *Tekman*; and lying to the northward of Erzerum.

The Greeks, after passing this mountain, descended into a valley, well-wooded and watered; and after some days march, re-ascended the mountains, which formed the [eastern] boundary of the *Colchians* of Trebisonde. These are all prominent objects: and if they follow each other, in this order, and at the required distances from each other, one would be led to conclude that the Greeks came by the *south-east*, to the district of Trebisonde: and not by the *east*, as some have supposed. (See above, page 245, *et seq.*)

One circumstance appears to be uncontrovertible. The valley into which they descended from the *prospect* mountain, appears clearly to be that, now denominated from the town of Baibort: for there is no other such valley to fix on: and it seems equally clear, that the place where they ascended the *Colchian* mountains, is at the opposite side of that ridge, which M. Tournefort ascended, on the third day from Trebisonde, in his circuitous journey to Erzerum.\* But M. Tournefort kept to the mountains for a considerable time, and did not descend into the valley of Baibort, till he had advanced 70 miles to the eastward of Trebisonde. Therefore it would seem, that his route could only coincide with that of the Greeks, within the space comprised between Trebisonde, and

\* Because, it appears from Hajy-Kalifa, that there was a pass in that quarter.

the place where *he* ascended, from the west, those mountains, which *they* crossed, and descended, in coming from the east: that is, the mountains named *Colchian*, by Xenophon; but *Mesjidi* by Hajy Kalifa.

But as the position of *Gymnias*, and the line of course on which the Greeks proceeded from thence to the valley of the *Macronians*, and the *Colchian* hills, are objects of curiosity, equal to any of the others, the inquisitive traveller and lover of antiquities, will not perhaps give up his research, until he is fully satisfied, what the circumstances of the locality, will, in any case, allow: and which of the systems appears the most plausible.

If he be supposed to set out from Trebisonde, in the first instance, in order to examine the roads leading from thence to the *south-east* and *east* (and it would seem unavailing to look to any other quarter, considering where the river *Harpasus* is situated), he would, of course, first enquire from those persons who had been in the habit of travelling on those roads, concerning the nature of the countries through which they led; and how far the ground, and the intermediate distances, accorded with the description in Xenophon: that is, in respect of the crossing place of the *Colchian* mountains, the valley of the *Macronians*, and the summits from whence the sea can be seen. Moreover, whether there be any *Tumulus* of stones, known to exist any where, on the summit of a mountain, from whence there is a view of the sea, on a road leading to Trebisonde, from the east, or south-east? Whether there be any town, in those quarters, in a situation that may suit that of *Gymnias*: and with a name, whose root is at all similar to it? And lastly, whether there be any honey of the quality

described, in the *Colchian* villages, now known; and where it is to be found?

It would also be a proper point of enquiry, whether at this time, persons who go from Trebisonde to Irwân (vulg. Erivan), and to the *Harpa-sou* (or the contrary), go by way of Comasour, or cross the valley of the Shorak (or *Apsarus* river)?

His attention will doubtless be led towards this quarter: because it may *possibly* happen, that a series of objects exactly similar to the other, may be found in the *direct line* between the *Harpa-sou* and *Trebisonde*; that is, entirely across the whole valley of the Shorak. But if so, one can conceive no other, than that the Greeks were carried from the bottom of the valley, through which their road lay, to the top of mount *Teke*, merely to be shown the sea; and then marched down again: whereas, one naturally collects, from the thread of the history, that the mountain of *Theches* lay in their proper road.

One cannot but suppose that the *Tumulus* erected by the Greeks, must be known to the people of the country around it, although ignorant of its origin. It must have been situated in a place, where some great road crossed a high mountain, from whence the sea was visible, though perhaps at a very great distance. And the place must have abounded with loose stones, or enough could not have been so speedily collected to form a *Tumulus* of any bulk: and this is described as being "*a mount of considerable size.*" (Lib. IV. c. 41.) Where loose stones abound, the place may be expected to be bare of wood; so that the mount itself, would of course be more obvious to the view, than in a woody situation. It is not likely that its materials would be removed: for, situated on a bleak

mountain, (as the ridge of Teke is described to be by Hajy-Kalifa); it could not well interfere with cultivation; nor can the materials be well applicable to use, in such a situation. We are very sanguine in the expectation that it may be found. If it should, it would doubtless lead to a knowledge of the situation of *Gymnias*: and at once develop the general line of the route from the river *Harpasus*.

A traveller, properly furnished with information at Trebisonde, would know what routes were the most promising, in respect of the objects of his researches: and should he succeed in this part, although the clue might be lost, at the Harpasou, yet he might perhaps, recover it again, at the villages of refreshment, on the north of the Euphrates; taking the bridge of Koban-Kupri for his point of departure, and proceeding thence to the south-eastward, to the mountains of *Ala*, situated about 18 or 19 miles distant. It is conceived that these villages will be found in the skirts of the mountains, about midway between the towns of Khanoos and Deli-Baba.\*

The positions in the route of the Greeks, along the Euxine, to *Cotyora*, are, with the exception of the latter place, better known than any of the inland positions. We have heard of no traces of *Cotyora*; but it is probable that they may be found at about 15 G. miles to the S. E. of Cape Jason, or Yasoun; as *Cotyora*, in the Periplus of Arrian, is 180 stades from Cape Jason.

The routes, during the short campaign in *Thrace*, are not sufficiently marked in the history, to encourage enquiry.

\* These ideas are rendered more precise, by the observations of James Morier, Esq. made during his journey from Persia to Constantinople, in 1809.

II. *Concerning the Modes of taking the Direction of the Route ;  
and of Estimating the Distance.*

Since a magnetic compass cannot be used at ordinary times, on the road, by reason of its being disturbed by the motion produced in travelling ; nor perhaps, in the Turkish dominions, at all times, without giving offence ; it may therefore be proper to describe a coarse, though useful, manner of taking a bearing, without the aid of a compass ; and which, with practice, will be even more exact ; because of the unsteadiness of the other. A watch may be used at once, for the purpose just mentioned, as well as for shewing the time. It is well known that, as the sun's bearing (or Azimuth), gives the hour of the day, so the time of day will give the sun's bearing ; the latitude and declination being known. The tables necessary to this purpose, will be found in a very portable book, in common use with mariners, called *The Mariner's Compass Rectified*. First, are the tables of the sun's declination, for each day ; and secondly, a table for each degree of latitude ; in which the bearing of the sun is given in *whole* points of the compass ; with the hour of the day, at which it arrives at each of those points. And although a point contains  $11\frac{1}{4}$  degrees of a circle, yet this is near enough for the purpose ; and perhaps as near as the bearing of the sun can be taken, by this method. But it will be easy to proportion the interval of time, between two points of bearing, to any fraction of a point : if judged necessary.

The operation of finding the bearing, by the above method, need only to employ a few minutes on the road : the calculation will best be performed afterwards, when at full leisure.

In order to take the angle between the sun and the object required; the watch, of course, is to be employed as an instrument for taking horizontal angles. However, the compass being divided into 32 points, whilst the watch has 60 divisions; an awkward fraction arises; since two of these divisions are equal to 12 degrees, and a point contains no more than  $11\frac{1}{4}$ . But this difficulty has the easiest remedy possible; which is, to mark the points on the dial plate, with red colour, with a fine pen, from 1 to 16, on each side of the hour VI.; it being proposed to point that part of the watch to the object; and reckoning thence, to the *right* or *left*, according to the position of the sun, at the time. The operation therefore is very simple: for the watch being held out before the observer, and pointed towards the object, whose bearing is required, nothing more is to be done, than noting over what point on the dial-plate, the sun bears: and then writing down both that and the time of day. Care must be taken to add to the point of bearing, R or L, for *right* or *left*, of the VI.; and to the time, H and M for hours and minutes.\*

Should the sun be very far to the right or left, or behind, the shadow will answer the purpose: in many cases, perhaps better.

Having by this process obtained the angle between the object and the sun; together with the time of day, the following is the method to be pursued, in order to obtain the bearing of the object, sought.

The sun's declination being found, in its proper table, and

\* If the observer prefers the mode of writing down the points round the whole circle, from 1 to 32; instead of 1 to 16, on each side of VI.; the R and L will be got rid of: but perhaps the former method will occasion the least trouble in the end.

the latitude known, (that is, to the nearest degree, only) the table of bearings for that parallel, is to be referred to. In that table, under the proper column of declination, and opposite to the hour of the day, the desired bearing of the sun will be found. And finally, the angle which the object made with the sun, being reckoned to the right, or left, of that bearing, according as the case may be, the result will be the required bearing of the object : and that clear of variation.\*

## EXAMPLE.

January 1, 1815, in lat.  $40^{\circ}$  north, at 1 h. 30 m. P. M. ; the sun was 3 points to the *left* of a certain object. The declination is found in the table to be about  $23$  degrees south.

In the table for lat.  $40^{\circ}$ , under  $23^{\circ}$  declin. S, and opposite to 1 h. 30 m. in that column, is found the bearing of S. S. W. ; or 2 points ( $22\frac{1}{2}$  degrees) to the *westward of south* : which is, therefore, the bearing (or Azimuth) of the sun at half past one. Then, the sun having been three points to the *left* of the object ; or, in other words, the object 3 points to the *right* of the sun, the *bearing* of that object must have been *five* points to the [right, or] *westward of south* ; that is, S. W. by W.

If on the contrary, the sun had been 3 points to the *right* of the object, the bearing of the object would have been *one* point to the *eastward of south*, or S. by E.

## EXAMPLE II.

On the same day, and in the same place, at 2 hours, P. M. ; the sun was found to be *two* points to the *left* of another object.

\* It will be obvious to the reader, that although the bearings of *objects*, alone, are mentioned ; yet that the same process applies to the line of direction of the road, when no distant objects that lie near the line of it, present themselves.

In the same column of declination ( $23^{\circ}$ ) no time is given between 1 h. 30 m. when the sun bears S. S. W. ; and 2 h. 20 m. when S. W. by S. But taking the proportion of the difference (of 50 min.) between 1 h. 30 m. and 2 h. 20 m. which is, of course, 30 min. or  $\frac{3}{5}$  ; and also  $\frac{3}{5}$  of the angle between S. S. W. and S. W. by S. the result will be  $6\frac{3}{4}$  degrees : and this added to  $22\frac{1}{2}^{\circ}$ , answering to S. S. W. will give S.  $29\frac{1}{4}^{\circ}$  W. for the bearing of the object. Or in points of the compass, somewhat more than S. S. W.  $\frac{1}{2}$  west.

Although it is certain that the differences of time, between the different points, do not proceed in arithmetical proportion, yet the error arising on the just mentioned process, is not considerable enough to merit notice, in these calculations ; seeing that the error can never be equal to half a point of the compass.

The watch is to be kept regulated to *apparent* time ; or with the sun.\*

As the latitude cannot, from various causes, be taken exactly in the place that could be wished, it would be a good rule, to take it as often as opportunity offered.

Much information respecting the positions of distant towns, or other objects, to the right and left of the road, may be obtained, by enquiring their *bearing* from different points in the road : and then forming them into triangles, of which the *bases* will be the distances travelled, between those points. Enquiry should be made, at as many points as may be convenient ; in order that one line of bearing may serve as a check to another.

\* This method was originally pointed out, for the use of the African Missionaries ; it being peculiarly adapted to passages across deserts : but it is obvious, that it is applicable to all situations.

People in one part of a country, generally know how other (principal) places, or remarkable objects, bear from them, although not in sight: and can point out the line of direction; which lines may be *set* by the compass; or, if there be any objection to the use of it, then by Azimuth, as in the former cases of bearing. And if several lines of bearing, are to be taken from the same station, one may be used as an *observation line*,\* and the angles of the others measured from *that*, by the sextant.

The distances, of course, can only be computed; and this is accomplished, in Turkey and Persia, chiefly by *time*; that is, the interval of time required to travel over the ground, by a man, walking at an ordinary pace. It is on this ground, that the ordinary computations are founded; and which are to be so understood, in the statements of distances amongst the natives. There are also itinerary measures in both countries, but they are more vague than the others.

But there being, of course, other modes of travelling, which give different rates; such as on horseback; and in caravans with mules or camels; &c. it will be necessary to treat of them; in order that, let our traveller's mode be what it may, he may have an opportunity of knowing, what the result of enquiries, relating to the subject, has produced. The author has,

\* By an *observation line* is meant, a line of bearing, terminating on an object, from which angles are to be measured horizontally, by a sextant, to other objects. So that the bearing of one object being adjusted, that of the others will, of course, be known, by adding the quantity of the angle in each particular case, to the former. It is obvious that if the angles are extended beyond the scope of the sextant, each way; another line, or lines of observation, will become necessary. If there be a choice of objects, the *sharpest* and *best defined*, should be chosen; as a *faint* one would become indistinct by reflexion.

accordingly, subjoined the results of his own calculations, of the rates, on the general modes of travelling in Turkey and Persia, (within which two countries, generally, the route of the Ten Thousand lay); and none but those who have made the experiment, can readily believe, how nearly the *means*, on different lines of distance, agree amongst themselves.

In the application of those rates, it is to be considered, that, as the distances, on *right* lines, between places, can alone be applied to the geography, it became necessary to establish a general proportion, between the *road distance* and the *direct distance*; which has been done, according to the result of much enquiry into the subject. It has appeared, that *one ninth part* may be deducted from the road distance: in other words, that 9 miles by the road, will give 8 on a straight line. But although this is given as a *general rule*, the judgment of the traveller will of course, decide, on the proportion, when the circumstances of the ground, are such as to require it; taking this canon, as a middle course.\*

Here follow the results of different enquiries, made with a view to ascertain the scale of the itinerary measures, and rates

\* The allowance of one part in nine of the road distance, for winding, appears to be exactly the same proportion with that adopted by M. D'Anville, whose experience, derived from a close application to study, during a life protracted to an unusual length, was perhaps greater than that of any other person on record. This proportion, however, is not meant to be applied *generally*, to roads in the improved state of those of many European countries; but rather to what may be termed *natural* roads. But it certainly happens that the road between London and York, has a winding of *more than one in nine*. For, if the maps are to be trusted, the distance on a right line, is 175 British miles: and the shortest road being 198, the difference is 23 miles: which gives a proportion of 1 in 8.6. This is doubtless much more than could have been expected; but as the distance consists almost entirely of difference of latitude, one cannot expect any considerable error in the *direct distance* between the two places.

of travelling, by time, in Western Asia. The latter is the most common mode of reckoning; and for the most part, by hours; but also by days journeys. The number of examples from whence these results are drawn; together with the labour of research and calculation, is beyond what would readily be supposed. The itinerary measures are of 4 denominations: 1. The *Persian Farsang*; 2. The *Turkish Agatch*; 3. The *Turkish, or Greek Mile*; and 4. The *Russian Werst*.

1. The *Persian Farsang*. This, in ordinary use, appears to be about  $3\frac{1}{2}$  British miles, by the road: or reduced to direct distance, in order to be applied to the construction of geography, 2,65 Geographic miles.

2. The *Turkish Agatch*. This appears to be exactly the same with the former, and probably may have been adopted from it: and this appears the more probable, as it is only in use in the quarter towards Persia; where the boundaries of the two countries have fluctuated.

3. The *Turkish, or Greek Mile*. This, taken on a mean of 900, along the southern coast of the Black Sea, is found to be of the standard of about 87 to a degree: and reduced to direct distance, 0613 Geographic mile.

4. *Russian Werst*. This appears to have been originally the same with the Greek mile: and from whence the Turkish mile also has been derived. In effect, the three agree together, within  $\frac{1}{18}$  or  $\frac{1}{19}$  part.

The distances measured by time, are next to be considered. These admit also of 4 varieties, in common use: one of which, however, branches out into two. They are: 1st, Ordinary journeys of single travellers, or of small parties, on foot.

2d, The same, on horseback. 3d, Caravan Travelling ; either with camels, or horses and mules. And 4th, The *mean* march of an army.

1. The day's journey of a traveller on *foot*, (not as a *courier*, or in a *caravan*), may be taken at 22 to 24 British miles, by the *road*; and which, reduced to *direct* distance, may give somewhat under 18 G. miles, for one day, or for a very few days: but if reckoned on a line of many days, collectively, about  $17\frac{1}{7}$ . For each hour, the *direct* distance may be reckoned at  $2\frac{1}{2}$  to  $2\frac{2}{3}$  G. miles; on a supposition that the rate by the road, is  $3\frac{1}{4}$  to  $3\frac{1}{2}$  British miles.

2. Journeys of the like class of travellers, on *horseback*, in Turkey and Western Persia. These are, of course, less reducible to rule, than the others, as it respects *whole* journeys: but may be taken on the whole at 26 to 30 B. miles, by the road; and in *direct* distance, from 18 to 23 G. miles. For single hours, applied to geographical construction, about  $2\frac{2}{3}$  G. miles *direct*. It must be observed, that *travellers* only *walk* their horses; although the *Tatars* (or *couriers* in Turkey,) ride post.

3. *Caravan* Journeys. Camels on the *Arabian* desert, on short intervals, make about 16 G. miles *per* day, in *direct* distance: but on long ones, only from 15 to  $15\frac{1}{2}$ . Mules 17 to 18. The hourly rate of camels, on the road, is about  $2\frac{1}{2}$  British miles, only; giving in *direct* distance, about  $2\frac{1}{8}$  Geog. miles, across the desert.

M. Niebuhr favoured the author with routes of caravans in Asia Minor, by which it appeared, that on 376 hours of travelling, on the different roads, the general mean was 2,23 G. miles, *direct*; or only just short of  $2\frac{1}{4}$ . These caravans are

supposed to have been composed chiefly of horses and mules; but no doubt, with an intermixture of camels. The rate, which is above that of camels, may be accounted for, by Professor Carlyle's account of his journey through Asia minor. After *long journies*, they waited some hours for the coming in of the camels, with the baggage. Now, as the loaded caravans only make journies of about 8 hours, the camels would not probably be more than 4 miles behind, at the close of the caravan day's journey; or perhaps, may set out earlier, than the horses and mules, in order to come in with them.

4. The Mean *Marches* of *Armies*. As so much has been already said, in the preliminary chapter, concerning this subject, it may only be necessary to say, in this place, that they are taken at  $14$  to  $14\frac{1}{2}$  British miles, by the road; and in *direct* distance, if for a very few marches, 11 G. Miles each; but on a considerable number reckoned together, as one line of distance, about  $10\frac{1}{2}$ . For further particulars respecting the marches, see page 5, *et seq.*

It will, doubtless, occur to the traveller, that in the construction of his map, the proportion of the *direct* distance, to *road* distance, must be subject to *different* rules, when given in TIME, than when given in ITINERARY MEASURES of any kind. For the *time lost*, by ascending and descending hills, will, in most cases, subtract more from the direct distance, than what arises from the mere *inequality of ground*. Thus, for instance, by the ascent and descent of a hill, no more than  $\frac{1}{10}$  of a mile, in point of *distance*, may be lost; but as much *time* may be lost by it, as would have carried a person, more than twice that distance over even ground. And when lofty and difficult *mountains* occur, it is impossible to give any rules.

These computed distances, whether obtained by itinerary measures, or by time, are still to be regarded as *comparative*, only: since in most cases, the *positive* quantity of distance, must be regulated by the space, between the two extreme points of the line of distance, on the map. Absolute distance can only be obtained, by the means of celestial observations; or by lines of distance, extended between places, so determined; and which lines have been regulated by the mean of many reports; and have also been subjected to a variety of lateral checks, in order to ascertain the points in which they vary from right lines.

## ADDENDA.

---

### I. Concerning the Itinerary Measures, employed by Xenophon. [Refers to p. 5, *et seq.*]

A CIRCUMSTANCE seems to shew, that Xenophon gave his statement of the length of the daily March, on the authority of the Persians; although the account has, no doubt, been since corrupted, in many places.

At ordinary times, he gives the number of parasangas, *positively*; but on the day of the battle of *Cunaxa*, he expresses himself differently. For in lib. i. c. 44, he says, that the Camp of the preceding day, (and to which they returned, the next night), "*was said to be*" 4 parasangas from the field of battle.

This surely implies that the length of the March in question, rests on a different authority from that of the others: and that previous to the battle, Xenophon had been in the habit of obtaining from the proper officer, the statement of the distances: (see the note to page 6) but that the change of circumstances had rendered it no longer practicable. For had the length of the marches, to that time, depended on the judgment of Xenophon, he would have been equally able to decide on this one; perhaps better, as he went *twice* over the ground.

II. Note on the Mean Marches of Armies. [Refers to pages 5 and 6.] \*

THE Author flattered himself, that he should have been enabled to exhibit in detail, and on the very best authority, the rate of marching, performed by the imperial Russian armies, during their memorable marches in 1815; from Doubno in Little Russia, and from Riga; to Manheim and Mayence, respectively: marches of more than two to three months, including the necessary halts. The acquisition of the necessary documents, was highly desirable, in order to prove the zeal and energy, with which the ranks of those armies advanced, in order to meet and to encounter, with the utmost promptitude, an enemy whom they regarded as having broken his faith, with the GREAT PUBLIC; and whose power was only to be employed, as the scourge of mankind. It is said, that the Russian commanders found it necessary to restrain the ardour, with which their troops were advancing, in order to prevent their finally sinking, under the fatigue of the march.

Unfortunately, the author could only obtain the dates of the departures and arrivals of those armies; together with the days, on which they passed through certain of the principal places, in their route: but without any specification of the number of *halting days*. Of course, the materials so obligingly communicated by General Count Michel Woronzoff, are incomplete, in respect of obtaining the desired result, of the length of the *mean march*; although the distances are regularly given, throughout.

The only use therefore that can at present be made of those tables of marches, is to endeavour to arrive at some kind of *approximation* towards the mean march, by allowing such a *proportion of halts* as has usually obtained in the marches of the Imperial Russian armies; combined with the peculiar circumstances of the case in question. It is highly probable, that no other halts were made, than were necessary to the well being of the troops, and to the preservation of the draught cattle, which accompanied them.

It has been stated to the author, by his excellency General Count Woronzoff, that the Russian armies, in time of war, generally march four days, and halt on the fifth. (In time of peace they march three, and halt on the fourth): but if necessary, in time of war, they march 5 or 6 days without halting; as happened in 1812, during its retreat; and afterwards, in pursuit of the French army, during the same winter. The army of Count Langeron employed an interval of 69 days, between the date of its leaving Doubno, which was the 7th of April, and its arrival at Manheim, on the 15th of June. If the ordinary rate of marching, in time of war, be taken, that is, one halt in five days, the number of marching days will be 55. The distance marched, is given by Count Woronzoff, at  $195\frac{3}{4}$  German miles; each of which being equal to 4 geographic miles, there will arise 783 geographic miles, equal to about 905 British: and the result will be 16,45, or nearly  $16\frac{1}{2}$  British miles for each march: which is *full two* miles more than has been considered as a *mean* march, throughout the present work.

But if it be true, that the universal sentiment amongst the troops, was, as before stated; and that they had been allowed to proceed according to the rate, said to be adopted, in cases

of emergency; that is, to march 5 or 6 days consecutively, without halting; such a proportion of halts, would give a mean march of 15.44, or  $15\frac{1}{2}$  British miles; which is still *one* full mile above the length adopted. Where the truth lies, it is impossible to tell: but one fact is certain, that taken either way, this Russian march exceeds the result, arising from the mean of all the numerous examples of marches, collected by the author.

The other army under General Paskewitch, left Riga on the 25th of March (1815), or 13 days previous to the departure of the other from Doubno; and arrived at Mayence, the 28th of June, 13 days after the arrival of the other, at Mannheim. The interval therefore, was 95 days. If here, the ordinary rate, in time of war, of one in 5, be taken, 76 marching days will remain. The distance set forth by the same authority, is  $222\frac{1}{4}$  German miles; but as there seems to be an error between Glogau and Leipzig, of 6 such miles, too little, the real distance will, of course, be  $228\frac{1}{4}$ , equal to 913 geographic miles, or about 1055 British,\* and the proportioned mean march, will be under 14 such miles (13, 88). But if the proportion of halts be taken at one in 6 or 7 days, the result will be no more than about  $13\frac{1}{4}$ , which appears improbable.

In fact, the author is totally in the dark, respecting the details of these celebrated and important marches; as well as of the appointments of each of those armies; and which may have very materially affected their progress, as well as the proportion of halting days.

However deficient these documents may prove, in respect

\* About 100 miles short of the length of the road from *Ephesus* to the field of *Cunaxa*.

of shewing the length of the mean march, yet they afford a satisfactory proof of the due proportion adopted, between the *road* and the *direct* distance, in a general view. M. D'Anville had long ago determined that  $\frac{1}{9}$  part should be deducted from *road* distance, generally; or, which is the same thing,  $\frac{1}{8}$  added to the direct distance. The author had also adopted the same proportion, after a long experience.

It is obvious that this rule cannot be expected to apply on very long lines of distance, such as those just mentioned, of 900 and 1000 miles; because that in so great an extent of country, some obstacle will oppose itself, and change the general course of the road. The author's method has therefore been, to divide any long line of distance, into portions of 80 to 120 miles, as the most diverging points of the road, presented themselves: and then to take the whole sum, collectively, as the *straight line* intended. It is on this ground, that the  $\frac{1}{8}$  is calculated.

It appears then, that between Doubno and Manheim, the direct line, drawn as above, was in the proportion of one in 8,85 shorter than the trace of the road. On that from Riga to Mayence, it was only one in *ten*. (See also the note to page 317).\*

\* General Count Woronzoff was pleased to communicate to the author, a system of marching, adopted by the late Marshal Count Souworoff; and which, from him, obtained the name of Souworoff's *careless*, or *easy* March; meaning that the troops were free to march without any kind of order or restraint, save that of keeping together, in their respective corps. As it appeared to the Author to be curious, and little known, he has given it here, in the Count's own words.

“ At the end of every ten *versts*, they halt about one hour, and then proceed. They  
 “ have besides, two halts of 4 hours each, in the 24 hours; one for dinner, and the  
 “ other for rest, at night. In this manner, and particularly if the halts occur in con-  
 “ venient places, the army may continue marching, without any exhaustion, a whole

It was not till after the book was printed, that the author examined the history of the famous march of the Great Duke of Marlborough, of six or seven weeks, from Brabant to the field of Blenheim, at the Danube, in 1704. The character of this march, was not that of one made at leisure, but rather the contrary: for it is said that "General Churchill was very expeditious, in following the Duke (his brother); though in such a manner as not to over-fatigue the troops."\* The Duke had gone before with the cavalry, with a view to prevent a junction of the French with the Bavarians; leaving the infantry, &c. to follow.

It is not easy to collect from military histories in general, the particulars necessary to the purpose of forming an accurate conclusion, respecting the *mean* length of the marches, made during any of the expeditions recorded in them. In the just mentioned march, such particulars are more commonly wanting: so that, it is only between *Coblentz* and *Great Gardach* (near *Hailbron*), 13 days, that the necessary information is to be found.

The halting days during this interval of 13 days, were 3 in number; and the marching days, consequently, 10: and on these ten arises a mean of less than 14 British miles per day.

"fortnight together; and nothing in the world can surpass the expedition of such a kind of marching: for then one may safely say, that the troops will march from 40 to 45 versts in 24 hours."

This may account for the wonderful marches, made by Marshal Souworoff, in Germany, Italy, &c.

\* "The method he took, for this end, was, to begin his March, every morning, by break of day, and encamping in their new camp, before the heat of the meridian sun incommoded them; so that the remaining part of the day's rest, till the next morning at day break again, was almost as refreshing as a day's halt." (This was in May and June). Lediard's History of the Duke of Marlborough, Vol. I. page 192.

In that part of the march previous to their arrival at *Coblentz*, although no clear result can be obtained, yet the rate may easily be perceived to be much the same, as beyond *Coblentz*.

After the separation of the Cavalry, at *Great Gardach*, the progress of the infantry is not reported in detail, during the long separation that followed.

On the whole, nothing is more certain, than that the Duke of Marlborough's march to *Blenheim*, does not exceed, if it even comes up to, the standard assumed for the mean march.

---

III. Concerning the Inundations of the Euphrates, in the quarter between *Feluja* and *Baghdad*. [Refers to the *hollow tract* left by a former course of the river, page 76, line 10.]

Mr. Rich observes in his *Memoir*, page 13, that "the most remarkable inundation of the Euphrates, is in the line between *Felugiah* and *Baghdad*." This is precisely the line of the hollow tract, intended in that place; in which the inundation is said to have "a depth sufficient to render it navigable for loaded rafts, and flat bottomed boats."

---

IV. Concerning the depth and rate of motion, of the Euphrates; explanatory of the subject of the Canals, &c.

[Refers to page 80, line 6]

It appears also by the same *Memoir*, page 13, that the Euphrates at *Hillah*, has a depth of 15 feet, when its waters are

low; and it appears that between Rûmkala and Beer, at about 700 miles above its mouth, it was 10 feet deep, when low.

Mr. Rich states the rate of motion of the stream, through the site of Bâbylon, to be about  $1\frac{1}{2}$  mile *per* hour, when lowest; 3 when swoln. Between Beer and Rûmkala, it was judged to be somewhat more than  $2\frac{1}{2}$ : and Mr. Irwin reckoned it at 3, in the quarter between Annah and Erzi. Both of these reports have a reference to the seasons, when the river was low.

\* \* The Ganges was found to be 30 feet deep when low, at a place 500 miles from the sea. Its current was taken at a rate, below 3 miles per hour, at the same place, and in the same season: and it is probable that most capital rivers, flowing through alluvial tracts, run at the rate of between  $2\frac{1}{2}$  and 3 miles per hour, when clear of the *tides-way*; and in the absence of floods.

---

V. Note on a passage in the Anabasis, concerning the river Tigris: omitted in its place, p. 88, line 13.

Whilst the Greeks yet remained on the field of *Cunaxa*, on the evening of the day after the battle, Clearchus assigns as a reason for not marching to attack the king, (lib. II. c. 5) that "between them and the king lay the *Tigris*, a navigable river, which could not be passed without boats; and those "they had not."

According to the present geography, it appears that the *proper* Tigris, could not have been intended; but doubtless,

there was a river in the question : and it is probable that the *Didgel* or *Lesser Tigris* was that river. However, the king's fears must have been very great, to have carried him so far out of the way of the Greeks.

It is indeed impossible to know what the exact course of the Tigris was at that day ; but as Pliny (lib. vi. c. 27) describes the separation of the Tigris into two branches, at *Apamia*, 125 M. P. short of Seleucia ; and their reunion, after forming the *Mesene* of *Mesopotamia* ; the *Didjel*, which must have been one of those branches, of course existed at that time : and it is probable, that Pliny wrote from Macedonian statements ; made perhaps within a century or two, after the time of Xenophon. The *Didjel* may have been a river of much greater bulk and depth, at that time, than at present : for it is now inconsiderable in breadth ; and also fordable. It may probably be considered as an ancient course of the main stream of the Tigris : and which, ever since the change, has been diminishing : examples of which are to be found, in most great river.

---

VI. On the great elevation of the point of view, from whence the sea was first seen by the Greeks, from M. Theches, or Teke. [Refers to the note in page 249.]

It being now known, from Mr. Browne, that the plain of Erzerum itself, is about 7000 feet above the level of the sea ; whilst the ground on which the castle of Teke stands, rises in a mountainous chain above it, (that of *Agatsbashi*,) it is probable that Teke itself stands at an elevation of an English mile and half above the Black sea. Of course, the view from

the crest of that ridge, must be very extensive; and the report of Hajykalifa, that "from its great elevation, the weather is so severe that in some years they have no harvests;" appears very probable.

---

VII. Concerning the period of swelling of the Euphrates.

[Refers to page 278.]

Mr. Rich says, (memoir, page 13,) "In the middle of the winter the Euphrates increases a little, but falls again, soon after: in March it again rises, and in the latter end of April is at its full, continuing so, till the latter end of June. The most remarkable inundation is at Felugiah, 12 leagues to the westward of Baghdad; where, on breaking down the Dyke which confines its waters, they flow over the country, and extend nearly to the banks of the Tigris.\* On May 24th, 1812, laden rafts were brought from Felugiah, to within a few hundred yards of the northern gate of Baghdad."

In respect of the first particular, the partial swelling in winter; this being at the same season with a like swelling of the Tigris, reported by M. Niebuhr, is probably owing to a similar cause; the winter rains.

With respect to the time of the first rising and filling of the Euphrates, one may conclude that Mr. Rich had been misinformed. Mr. Eyles Irwin, who travelled along it, during 5 or 6 days in the beginning of April, and crossed it at Annah; says (writing on the first day of that month,) "the Euphrates is now expected to *begin to rise*."

It does not therefore appear probable that it should arrive

\* See page 76, line 8, for the hollow tract, &c.

at its height, during the course of that month ; any more than that it should continue in that state, during an interval of two months. But the fact of its being in flood, on the 24th May, is however established, on the personal knowledge of Mr. Rich ; and appears probable in itself.

Mr. Ives's party were told on the 6th of May, whilst in the *Marshes of Semowha*, that the river did not commonly overflow the *Marsh Lands*, so soon.

Pliny appears to have believed that the principal floods of the Euphrates, were in the early part of July ; and that the river was fallen to its ordinary state, by the middle of September. (lib. vi. c. 26.)

## INDEX.

[The names in Italics are those mentioned in the ANABASIS.]

A.	Page	Page
Aba or Abi Mt. (Armenia)	- 211	Alexandria (near Issus, or Alexandretta) 53
Abdulkurreem	- 127	Alexandretta (See also Scanderoon) 57
<i>Abrocomas</i>	- 112	Almamoun, (Caliph) measures an arch of the meridian, in the desert of Sinjar 70
Abu-Bekir-Ben-Behram, his Geography of Anadoli, or Natolia	- vi.	Amanus, mountains of, 39, 40, 42, 43, 51, Passes of - 40, 41, 42, 56.
Abulfeda	- vii, 80, 207	Ammianus Marcellinus, describes Isauria as a maritime country (meaning Cilicia Trachea), 33. Describes the great abundance of palm trees in Babylonia, 79, 117, 118, Describes the Median Wall in ruins, 97. His Observations on the Desert of Mesopotamia, 100. Saw the Mound of Trajan, near Hit, 102. Speaks of the Bitumen Fountains, 108. And of the Wine and Honey made from the Date Fruit 118, 122
Abutaleb	- 126, 127	ANABASIS, the most interesting part of ancient Military History, 1. Requires much geographical illustration, 2. Great errors in its numerals, 8, 29. Contains much information respecting the œconomy and management of the Grecian armies, 14. Written long after the events took place 17. Fitted to inspire confidence in our own resources, 286. Contains useful lessons, applicable to common life, 287. Proposal for the Improvement of its Geography, 291 <i>et seq.</i> Different travellers to examine such portions of it, as may fall within their respective tours, 293. Mode of taking the direction of the routes, without a magnetic compass, 312 <i>et seq.</i> On the computation of distances, 316 <i>et seq.</i> Their application to tabular geography, 320, 321, 327.
<i>Acbaïans</i> , land at <i>Calpé</i> , 264. Cut off by the Bithynians	- 265	Anabil or Enabil - 38
Adiabene	- 151	Anadoli, a portion of Asia Minor vi
<i>Ægææ</i> (Ayasse)	- 41	Ancyra (Anguri) - 38
<i>Ælian</i>	- 186	Andabilis, or Andavilis (Anabil) 38
Agamana	- 104	Anga - 104
Agats, or Agatch-Bashi, (mountains of the Moschi)	- 244, 248	Anguri (Ancyra) - 38
Agatch-Degniz	- 248	Ani - 226, 237
Agatsh, (Turkish itinerary measure)	318	
Aggarkuf	- 78, 98	
Agri-dagh (or Ararat)	- 162, 210	
Aineada (Thynias)	- 268	
Akbara	- 126, 128	
Aklat	- 207, 208	
Akliman	- 261	
Akshahr	- 28, 34	
Aksou river, (the <i>Teleboas</i> of Xenophon)	207, 212	
Ala-dag, or mountains of Ala,	210, 212, 217	
Alalis	- 62	
ALEXANDER, his Imperial Majesty the Emperor of all the Russias; his gracious aid, in the contribution of geographical documents	- xx	
Alexander, his long marches in pursuit of Darius, 6, 7. Founds the city of Nicephorium, 63. Is supposed to have crossed the Euphrates near that place (Racca) <i>ibid.</i> Fords the Tigris near the Zaco hills, 155, 174. Sails up the Tigris to Opis, 126, 127. Mentioned, 24, 42, 53, 63, 154,

Erzerum, its elevated situation, xxi. Mentioned 212, 215, 227, 331  
Erzi, or Irsah, (taken for *Corsote*.) 103, 104  
Euphorbium 24  
Euphrates, river, (meaning the confluent stream formed by the Frat and Murad,) account of, 74. Has changed its course in the part towards the sea, since the date of history, 75. Runs on a higher level than the Tigris, above the site of ancient Babylon; but the contrary below it, 76; whence the tide ascends highest in the Euphrates, *ibid.* Time of its periodical swelling, 77, 276, 332. No apparent change in its course in the quarter where it approaches nearest to the Tigris, 83. Many ruins of towns and castles near its banks, 104. Generally avoided by Caravans in modern times, 105. Time when lowest, 277, 332. Mentioned, 60, 68, 70, 72, 103, 300, *et seq.* Further account of the Euphrates, in the Addenda. Its Inundations, No. III. Depth and rate of Motion, in different parts of its course, No. IV. Its periodical swellings, No. VII.  
Euphrates of Xenophon, or eastern branch above Taurus, named the Murad. (See Murad.)  
Euphrates, western branch, or Frat. (See Frat.)  
Evers, Captain 84, 85

of Zaco, 157. Dislodge the enemy from the heights in their front, 166. Their progress arrested by the overhanging cliffs, of the Tigris, 167. Ascend the Carduchian Mountains, 170 et seq. Remarks on the change in the military disposition, during the Retreat from the Zabatus to the Carduchian mountains, 175 et seq. Their route difficult to trace after they left the Tigris, 189, et seq. Their erroneous ideas of the geography, 191, 194. Cross the *Centrites* river, and proceed through *Western Armenia*, 199, 203. Cross the river *Teleboas* (Ak-sou), 207. First villages of refreshment in Armenia, (*Yezidkoi*), and the first fall of snow, 215, 216. Cross the Euphrates (that is the Murad or eastern branch), in the district of *Khanoo*s, *ibid.* Their sufferings and extreme distress, from the severity of the weather and want of necessaries, 216 et seq. Second villages of refreshment, north of the Euphrates, 217 et seq. Deserted by their guide, 223. Wander about 21 days, when they find themselves at the river *Harpasus* (or Harpa-sou), 224 et seq. Their route not traceable *ibid.* Return from the *Harpasus* to *Gymnias*, 224 et seq. Supposed cause of their long wandering, 239, et seq. View the sea from the summit of mount *Theches*, or *Tekè*, 245, 250. Force a passage over the *Colchian* mountains, 252. Admirable disposition for the attack, *ibid.* Arrive at *Trebisonde*, 254. Subsist themselves there a month, chiefly by plundering the mountain *Colchians*, *ibid.* March thence to *Cerazunt*, 257; and *Cotyora*, 260 (not being able to collect ships enough to receive the whole army). Being supplied with ships at *Cotyora*, the whole army embarks, 261. Touch at *Harmene*, a port of *Sinope*, *ibid.* Arrive at *Heraclea* of *Pontus*, 262. Separate into three divisions: one under *Cheirisophus*, goes by land to *Calpé*; the others by sea, 264. The division of *Peloponnesians* suffer a great loss in *Bithynia*, 265. The three divisions again unite, and obtain a complete victory over the *Bithynians*, *ibid.* March uninterruptedly to *Chrysopolis*, at the *Bosphorus* of *Thrace*, *ibid.* Pass over to *Byzantium*, 266. Driven out of *Byzantium* by the *Lacedæmonian* governor; and 400 of their sick men left there, sold for slaves, *ibid.* Compelled to take service with *Seuthes*, a *Thracian* prince; with whom they make a

- winter campaign of two months, 266, 270.  
 Engaged to join the national army of Greece, under Thembron, 270. Statement of their numbers, 272 *et seq.* At Cunaxa, 273. At the Colchian mountains, *ibid.* At Cerazunt, 273, 274. And at Heraclea, 274. Great diminution of the light troops, 274. About one half of the original number finally remains, 275, 284. None lost during the campaign with Seuthes, *ibid.* The Expedition employed two full years, 284. Dates of the Transactions, 285.

Exceedingly elevated, <i>ibid</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |      |
| Teke, castle of, on the mountain, named <i>Theches</i> , by Xenophon, position of, 244, <i>et seq.</i> 247. Its distance from the sea, and from Trebisonde, 244, 249. Supposed elevation above the Black Sea, 331.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |      |
| <i>Teleboas</i> river, the Arsanius of Lucullus, and the Aksou of the Turks, 204, 207, 211, 212.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |      |
| Tents, used in making floats to cross the Euphrates, 108. Destroyed in order to reduce the baggage, 142, 168.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |      |
| <i>Teribazus</i> , Satrape of Armenia, his treacherous conduct, and defeat, 205, 209, 215                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |      |
| Texeira, Peter, describes the Plain of Antioch and ascent of M. Amanus, 66. Traced a portion of one of the canals of the Euphrates 78. Notes the breadth of the Tigris river, 79. Remarkd the strait of Nazerya, at the northern bank of the Euphrates, 84. Also an Eminence near the Euphrates in the supposed quarter of Cunaxa, 94. Saw herds of wild asses on the opposite side of the Euphrates to that where Xenophon saw them, 100. Saw the Bitumen in universal use in the quarter where it is produced, 108. Observed the almost total ruin of the Canal of Communication, between the Euphrates and Tigris, 117.                                                                |      |
| <i>Thapsacus</i> , its position, 60 <i>et seq.</i> Taken for El Dar, <i>ibid</i> . Xenophon appears to have transposed the distances, between the <i>Daradax</i> and <i>Thapsacus</i> ; <i>Thapsacus</i> and the <i>Araxes</i> , 60, 61. <i>Thapsacus</i> a ford, and an important passage over the Euphrates, 63. Alexander appears to have crossed the Euphrates higher up, <i>ibid</i> . The names, both ancient and modern, signify a passage, 64. Distance between <i>Thapsacus</i> and Babylon, according to Strabo, 71.                                                                                                                                                            |      |

## PREFACE.

---

THE within Tract originally formed a part of a voluminous work, on the COMPARATIVE GEOGRAPHY (the Ancient with the Modern) of LOWER ASIA: the completion of which has been delayed, from various circumstances; amongst others, the expectation of receiving much additional and valuable matter. But as this portion of it (as well as some others) could be extracted, without violence, either to the general work, or to the extract itself; and as two respectable Travellers have very recently given their observations and opinions, and that in considerable detail, on the TOPOGRAPHY of the TROAD; this was judged to be a proper season for sending it forth: that is, whilst those who take an interest in matters of antiquity, might be supposed to have their attention drawn once more towards the subject. And more especially, since the opinion of one of the beforementioned travellers, has disturbed that long repose of the question, which M. de Chevalier's system seems to have produced.

\* The TOPOGRAPHY of the PLAIN of TROY has become a kind of party question in literature: though by far the greater

\* What follows, is taken from the original manuscript, written in 1810, from Notes and Observations of a much earlier date.

number of persons have espoused the opinion of M. de Chevalier; or what, if the reader pleases, may be termed, THE NEW DOCTRINE: for to that time (1791), a different opinion, founded on the authority of those, who were deemed the best informed amongst the Ancients, had prevailed.

Such being the state of things, it became a service of some danger, for an humble individual to enter the lists, in the face of an opinion, which had been repeatedly approved by men of the first erudition in Europe, during the last twenty years: but as it will be made to appear, that their opinions were founded on an erroneous statement of the Topography, as well as of the temperature of the Springs, (*absolutely* as well as *comparatively*), the Author trusts that he will stand acquitted of presumption, or of a wish to cavil.

It was, indeed, the wish of the Author, to keep aloof from controversy: and for that reason, he had originally intended to acquiesce in the system of M. de Chevalier. But finding, subsequently, that the two sources, denominated the *warm* and the *cold* Spring, were exactly of the same temperature;<sup>b</sup> that instead of two, there were at least EIGHT of the same kind; and also that Professor Carlyle had found a river (or torrent) of the name of SHIMAR, in a position proper to the SIMOÏS, (and which had escaped the observation of

<sup>b</sup> It is wonderful that so many persons of respectability, amongst those who have visited the Springs, should have allowed themselves to be so far deceived, as to report that one of them was *warm* and the other *cold*, when both were of a like temperature.

Messrs. Chevalier, Kauffer, and Gell;<sup>c</sup>) the charm began to dissolve. Indeed, with M. de Chevalier for his guide, the Author had at times found, as he thought, reason to doubt the accuracy of the Poet: first, in the improbable extent of the ground, over which his heroes were represented to have marched and fought, within a given time; and secondly, for his want of exactness, in his descriptions and characters of the rivers of the *Troad*; since it was difficult to regard the *equable* and *smoothly flowing* River of BOUNARBASHI, as the *irregular* and *furious torrent* of the SCAMANDER. As the subject, therefore, fell within the scope of his work, his silence respecting it might either have been taken for a tacit approval of M. de Chevalier's system; or that, although he disapproved it, he still found the subject too difficult for him to attempt. Had the difference of opinion been in shades only, he would have remained silent: but it was total; in respect of the identity of the Rivers, and of the *Tumuli*; and the position of Troy. He therefore determined to seek a more probable development of the scene of the Iliad, in the quarter where the Ancients, as well as the Moderns in general, to the time of M. de Chevalier, had placed it.

Mr. Gell, although amongst the supporters of M. de Chevalier's general system, has ventured to think for himself, in his mode of setting forth his assent to the identity of the rivers, and to the given position of Troy.<sup>d</sup> He has, indeed, done this

<sup>c</sup> As also (as appears by his second volume) of M. Choiseul Gouffier.

<sup>d</sup> In his very elegant work of the Topography of the Plain of Troy, 1804.

in such a manner, as to give an opponent fair play : and instead of taking away the ground, on which alone the subject could be contested, he has even cleared it of the mountainous incumbrances laid on it, by the erroneous Topography of M. de Chevalier : by which the detection of this gentleman's errors, has been hitherto prevented, by an absolute removal of the means : that is, of the extensive Plain opened to us by Mr. Gell, on the east of the River Mender. For, in the Topography of M. de Chevalier, this space is, for the most part, described as a mountainous region.

Hence Mr. Gell's conduct procures for him a distinction, next to that of having accomplished his object, with the most consummate success. For having given a more correct Topography ; as well as a complete idea of the nature of the whole ground of the Troad, by means of a set of *panoramic* landscapes ; he has laid so ample and solid a foundation, that the Author has been enabled to raise on it a superstructure, from the materials furnished by Professor Carlyle. So that by the aid of both sets of materials, combined, he has been able to establish a new system : or rather to revert to the ancient one, with an increased facility of explanation and proof.

It may possibly be objected, that the Author has entered too much into detail ; and often dwells on circumstances of little moment : but as one principal object in view was to endeavour to establish the *consistency of the story of the Poem*, in what relates to the *Scene of Action*, and to the *Acts of the Personages concerned* ; considered as mere human agents ; it

could no otherwise be accomplished, than by entering into detailed enquiries, and by a frequent use of hypotheses. Repetitions, also, were found to be unavoidable, in the attempt to render each separate head of enquiry more distinct.

The Author has, on a former occasion, declared his ignorance of the Greek language ;\* which has again rendered it necessary to have recourse to translations. On the present occasion, where the argument sometimes hangs on a doubtful, or at least, a disputed phraseology ; and where all the descriptions are in *poetic language*, it may probably be concluded, not without reason, that the just mentioned deficiency on the part of the Author, is likely to be productive of still greater inconvenience, than on the former occasion.

But as it does not always happen, that a critical knowledge of languages, and a turn for disquisitions of this kind, meet in the same person ; it may perhaps be allowed, that the sense of the text, as ascertained by able grammarians, or Philologists, may be used as a ground-work, by such as are qualified to pursue other necessary enquiries with effect. Nor will this argument lose a tittle of its force, should the public voice exclude the Author from this class of persons. The History of Editorship seems to prove that there are cases, in which all the learning of the scholar, has not rendered him equal to the task of elucidating his Author, when

\* In the Preface to the Geographical System of Herodotus, page ix. to which the Author begs leave to refer the Reader.

explanations have been attempted, in the usual manner, by the medium of notes. Or, in other words, that a scholar may be a most perfect judge of the beauty of Homer's poetry; but that, through the want, either of a more competent knowledge of nature; or of general, as well as of military, science, and practice, he may be incapable of illustrating certain parts of the Action of the Poem. For this Action will be found to bear the test of examination, in respect of its consistency, as far as human agency is concerned: and therefore is not to be regarded as a mere vehicle of poetical effusions; but rather as a consistent story, adorned with all the graces of Poetry.

The Author has been informed that the version of Mr. Cowper is, in general, very faithful; although for the present purpose, a more literal one would, perhaps, have been more useful. The Author ventured to trouble a friend for literal translations of certain passages, which were very important to his purpose: but the boundary of discretion was not to be transgressed, in order to obtain reputation, by the use of another's judgment.

Mr. Cowper's version has, accordingly, been followed generally. It appeared quite unnecessary to transcribe the numerous quotations from the original Greek, into the Memoir; since the class of readers who may wish to consult the original, are, most assuredly, in possession of a copy of it. It would moreover, have swelled the work unnecessarily, as well as enhanced its price.

References are constantly made to the numbers in the Greek original, as well as to those of the translation.

It remains that the Author should make his acknowledgments to his Friends, by whose assistance he has been enabled to render his Work more perfect. He begs leave, therefore, to offer his best thanks to Sir Joseph Banks, Sir Charles Blagden, Dr. Gillies, Mr. Gell, Mr. John Hawkins, Mr. John Walker, Mr. Robert H. Inglis ; and to Messrs. Thomas and Philip Hope. He laments that Professor Carlyle should not have lived to witness the great advantages derived from his valuable discovery of the upper course of the Shimar River ; which particular, perhaps more than any other, has operated to *restore* the *Ancient System* of Topography of the Troad.

A general reference to Mr. Gell's Book, on the TOPOGRAPHY of the TROAD, and particularly to his Plans and Landscapes, will explain, most effectually, the ideas meant to be expressed by the matter of this Tract.

The Reader is also referred to Dr. Chandler's HISTORY of TROY, published in 1802, for a great number of curious and interesting particulars, respecting that city and territory. He appears to have collected together, all that is known on the subject.

NOTICES RESPECTING THE SEVERAL DIVISIONS OR COMPARTMENTS OF THE ANNEXED MAP.

THE accompanying Map, which is explanatory of the present subject, contains six compartments; of which, the following is a short description and explanation.

N<sup>o</sup>. I, which is to be regarded as a document founded on authority, has for its groundwork, the observations of Mr. Gell, contained in his Book on the Topography of the Troad; and in his Plan, N<sup>o</sup>. XLV. To these are added, certain observations of Messrs. Kauffer and Carlyle: but these contain a small proportion of the whole; since all the matter, to the *left* of the *hair line* x x x is from Mr. Gell. The part from M. Kauffer (See N<sup>o</sup>. IV.) consists of the outline of the Valley of Thymbrek, and the course of its River; together with a portion of Mount *Ida*, contiguous to it.

The sketch of Professor Carlyle (N<sup>o</sup>. V.) furnishes the routes from *Koum-kala*, through *In Tepé*, *Koum-kui*, *Thymbrek-kui*, and *Atchekui*, to *Bounarbashi*: together with the course of the River *Shimar*, generally, from Mount *Ida* to the sea.

The position of Troy is assumed, merely with a view to aid the imagination, in the process of arranging the suite of positions, given by Demetrius; and in reference to the *Tumulus* taken for that of *Myrinna*. But it is by no means pretended, to fix the exact site; although it is probable that the *quarter* in which it stood, cannot be mistaken.

N°. II. is an attempt to reconcile the ancient topography of the fields of battle, the Grecian camp and wall, and the camp of the Trojans, near it; the sea coast of the Bay, between the Promontories of *Sigæum* and *Rhæteum*; and the lower courses of the *Scamander* and *Simoïs*; to the events related in the *Iliad*.

N°. III. is M. de Chevalier's Plain of Troy, reduced to one half of the original scale. It will there be seen, that instead of a wide Plain on the east of the Mender, between the opening of the Thymbrek Valley and Bounarbashi, he brings the hills very near to the bank of the Mender; whilst the Plain between the Rivers Mender and Bounarbashi, is widened far beyond the proportions given in the Plans of Mr. Gell and M. Kauffer.

The Reader is requested to compare this N°. III. of M. de Chevalier,<sup>f</sup> with M. Kauffer's, on the right, and Mr. Gell's on the left: as also to refer to the note in page 33, for Mr. Gell's statement of the extent of the Plain. It will appear, moreover, that the River Shimar is entirely omitted in N°. III.; and that the Thymbrek is substituted for it: whilst the *true place* of the Thymbrek, according to Messrs. Gell, Kauffer, and Carlyle, is filled up with hills. In effect, that the two Vallies are confounded together, and made into one. See N°. I. IV. and V.

N°. IV. is the Plan of M. Kauffer, made, as is said, at the instance of Count Ludolf. This copy of the original MS. Plan, was obligingly communicated by my friend, Mr. John

<sup>f</sup> In M. de Chevalier's Plan, although the *sites* of Kalifatli and Koumkui Villages, are inserted in their proper places, yet their *names* are omitted. In the annexed Map the omissions have been supplied.

Hawkins; who has himself traversed the ground,<sup>s</sup> and has no doubt of the authenticity of the Plan, from whence it was copied. It differs materially from the one published by Messrs. Clarke and Cripps, in 1803. Mr. Hawkins accounts for the differences amongst the several Plans, passing under the name of Kauffer, both from their being *copies of copies*, often carelessly made; and from the license taken by persons, to insert their own ideas; a glaring instance of which, in the copy of 1803, is pointed out by Mr. Hawkins and Mr. Gell: for the *marshy* ground between *Koumkala* and *In Tepé*, is there described as a *hilly* tract.

A second error of the same copy of 1803, is the narrowing of the Plain (almost to nothing) on the eastern side of the Mender, in the quarter towards Koum-kui, where, according to Mr. Gell, and M. Kauffer's original Map, it is more than a mile in breadth. It may be suspected that the distances in M. Kauffer's Plan, are generally too great.

But this Plan of M. Kauffer's (as well as that of Mr. Gell), entirely omits the tract between the Plain, east of the Mender, and the Vale of Thymbrek; whence it has happened, that the upper part of the course of the *Shimar*, or River of Kalifatli, has remained unknown: and the river was supposed to terminate (or rather to *originate*) at Chiblak: from which point, downwards to Kalifatli, they both describe it.<sup>h</sup>

<sup>s</sup> See the Edinburgh Phil. Trans. Vol. IV. Literary Class.

<sup>h</sup> Dr. Clarke, whose second volume has appeared since the above was written, has confirmed the important fact of the extension of the river that passes by Chiblak: that is, the *Shimar*. The Doctor names it from *Kalifatli*: but Mr. Carlyle, who, from his knowledge of Oriental languages, was enabled to enquire more particularly into the matter, calls it *Shimar*. The term *Osmak*, employed by Dr. Clarke, should probably have been *Irmak*, a Turkish name for river; so that it would be *Kalifatli River*.

Nº. V. is a sketch by Professor Carlyle, reduced to about half the scale of the original.

This is, indeed, a very rude and imperfect performance, if considered as a piece of geography; to which, indeed, it has no title; being done merely to express the general direction of some important routes, which the minutes of the Journal alone, would not have accomplished. It is, however, highly valuable; as those routes very satisfactorily prove the existence and course of the River SHIMAR; the supposed SIMOÏS. Professor Carlyle has also pointed out its different courses in winter and in spring, or rather, in its swoln, and in its low state. In the former, it joins the Mender at Kalifatli; in the latter, near Koum-kala; passing in its course by Koum-kui; at which place, one of the copies of M. Kauffer's Map, notes the junction of a river with the Thymbrek; and which is, doubtless, the Shimar in question. On its junction, it communicates its name to the Thymbrek; being the larger stream, according to Mr. Carlyle. It is worthy of remark, that in the accompanying Map, by M. Kauffer, there is the *trace*, as of an ancient water-course, from the quarter of Koum-kui, to the inlet named *In Tepé*, answering to the ancient course of the *Scamander*, according to Pliny's description. (lib. v. c. 30.)<sup>i</sup>

It was on occasion of the discovery of the course of the Shimar River, by Mr. Carlyle; and the exposure of the wide Plain, east of the Mender, by Mr. Gell (for the corrected copy of M. Kauffer's Plan had not then made its

<sup>i</sup> The Reader is cautioned not to confound Koum-kui with Koum-kala. The former is a village, near the opening of the Valley of Thymbrek: the other, the town belonging to the castle, at the southern point of the entrance of the Dardanelles. One is Sand *Village*; the other Sand *Castle*.

appearance); that the Author was enabled to discuss, with any effect, the subject of the following Memoir. Thus, Mr. Carlyle proves the existence of *two* rivers, within the space in which M. Chevalier describes *one* only.\*

\* It may be satisfactory to the Reader, to compare the minutes of the Professor's Journal, between the Dardanelles and Bounarbashi, with the ground in his sketch, &c.

H	M.	
9	6	March 9.
—	—	Left <i>Yenishehr</i> ; crossed the <i>Mender</i> , and soon after the
—	—	<i>Shimar</i> : i. e. the united streams of the <i>Shimar</i> and <i>Tymbrek</i> :
—	—	but which, after their junction, takes its name from the larger
—	—	stream.
—	—	Crossed the <i>Touzla Azma</i> , or Salt Stream.
—	—	Crossed another salt stream, named <i>In Tepé Azma</i> .
—	—	<i>In Tepé</i> , (Tumulus of <i>Ajax</i> .)
11	48	Left <i>In Tepé</i> .
12	7	Entered the Plain.
—	17	Cross the <i>Shimar</i> : and arrive at <i>Koum-kui</i> .
1	30	Left <i>Koum-kui</i> .
2	20	<i>Khalili-kui</i> .
4	30	Left <i>Khalili</i> , and soon afterwards crossed the <i>Tymbrek</i> River.
5	30	Village of <i>Tymbrek</i> .
March 10.		
8	30	Left <i>Tymbrek-kui</i> , and proceeded in a south-westerly direction to
9	30	<i>Eski-Akshi-kui</i> ; which lies about half an hour's distance from
—	—	the <i>Tymbrek</i> .
11	11	Left E. A. K., and proceeded nearly E. b. S. till we arrived at the
—	—	banks of
11	38	The River <i>Shimar</i> .
12	12	To a ruined Aqueduct over the <i>Shimar</i> .*
—	—	Returned to <i>Eski-Akshi-kui</i> .
2	40	Left E. A. K. again.
3	6	<i>Mal Tepé</i> on the right.
3	20	<i>Akshi-kui</i> .
3	27	<i>Khana Tepé</i> on the left. Another <i>Tepé</i> or <i>Tumulus</i> on the
—	—	right: the road passes between them.
3	45	Crossed the <i>Mender</i> River.
4	25	<i>Bounarbashi</i> Village.

It is noted on the original sketch, that the bearing along the upper part of the course of the *Shimar* River, is *nearly* E. b. S. But it is *laid down on the sketch*, about SE. b. E. It then becomes a question, which of the two is right? It might have been expected, that the act of constructing the Map, from the Notes, would have sufficiently awakened the recollection of the Traveller. The Author has followed the Note. Had the Sketch been followed, the hill of *Atchekui* would have stood very much nearer to the *Shimar* River. (See p. 46.)

No. VI. contains a general view of the positions and directions of the principal chains of Mount Ida: as also the course of the Mender, taken for the *Scamander* of Demetrius, from Mount *Cotylus*. By this is also shewn, the particular chain of Ida, intended by Strabo, Herodotus, and Xenophon: and which appears to be distinct from that, which according to Demetrius, contains the sources of the *Scamander*, *Æsepus*, and *Granicus*.

This compartment is a small portion of an unpublished Map of *Æolis*, *Ionia*, the *Hellespont*, &c. on an enlarged scale.

\* \* \* \* \*

The whole interval of time employed in the *ILIAD*, appears to have been about fifty-seven days: and that portion of it, between the first battle, before the *Scæan* Gate, and the death of Hector, eight days only; both inclusive.

#### ERRATA.

CONTAINING A COMPARISON OF THE IDEAS OF THE ANCIENT  
GEOGRAPHERS; AND OF DEMETRIUS OF SCEPSIS IN  
PARTICULAR; WITH THE ACTUAL TOPOGRAPHY  
OF THE TROAD.

# OBSERVATIONS, &c.

---

## PART I.

### SECTION I. PRELIMINARY OBSERVATIONS.

*Prevailing Ideas respecting the Topography of the Troad—The Site decisively marked, by the Promontories, and the River's Mouth.—The System of M. de Chevalier, founded on an erroneous Topography—Demetrius of Scepsis, approved by Strabo—by M. Heyne, and by Dr. Chandler—discredited by M. de Chevalier—Misapprehensions respecting the Source of the Scamander, the great Cause of difficulty, hitherto, in developing the Subject—The hot Spring before the Scæan Gate not to be found—The Ancients believed the general Truth of the Story of the Iliad:—but the question here, is only whether Homer's Description agrees with the reputed site—Curiosity both of Ancients and Moderns respecting the Site and Remains of Troy—The Subject to be investigated, by comparing the Ancient Descriptions, with the actual Topography—Proposed manner and order of treating the Subject.*

THE scene of the warfare of the ILIAD is well known to have been described by the poet, as an extensive plain, or flat valley; intersected by two torrent streams from MOUNT IDA; and which, forming a junction in that plain, discharged

their confluent waters into the *Hellespont*, between two promontories; which, although *spoken of* by Homer,<sup>a</sup> are not *named* by him: but from succeeding authorities,<sup>b</sup> are well known to have been intended for those of *Sigæum* and *Rhoeteum*. They are, moreover, strongly marked by the positions of the *tumuli*, ascribed to Achilles and Ajax, in reference to their military stations, in the line. These promontories, therefore, together with the discharge of the confluent waters, from *Ida*, by an opening situated between them, are unerring guides to the Plain of Troy; since there is *no other* river, or plain, that opens to the *Hellespont*, from *Ida*: so that it appears impossible to refer the scene of the *Iliad*, to any other spot, in the LESSER PHRYGIA.

It is also well known that one of those streams was named *Scamander* (or *Xanthus*); the other *Simoïs*; and that no others are mentioned by Homer. But a *third*, under the name of *Thymbrius*, is mentioned by Strabo, issuing from the valley of *Thymbra*; which valley (though not the river) is noticed by Homer.<sup>c</sup> And a *fourth* river, the *Bounarbashi*, appears not to have been mentioned by any of the ancients; unless it be the *Amnis navigabilis* of Pliny: which, however, is uncertain. At present, this river flows into the *Ægean* Sea, (or Archipelago); though appearances authorize a belief that at some period it ran into the *Hellespont*; either in a separate stream, or conjointly with the Mender; and that it was *forced* into its present channel, by an artificial mound, in order to irrigate the valley that branches off, from that of

<sup>a</sup> *Iliad*, lib. xiv. v. 36. Cowper, v. 42.      <sup>b</sup> Pliny, in particular, lib. v. c. 30.

<sup>c</sup> In this valley was situated the Temple of Apollo, which doubtless gave him the name of *Thymbraeus*.

Troy, between Erkessi-kui and Jeni-kui. (See the map, compartments Nos. I. and II.) Whether this change was effected before, or after, the war of Troy, cannot be known: but in the present enquiry, it may be fair to consider it, as being *posterior* to that event.

Accordingly, there are *four* streams to be considered in the Troad: *three* of which, that is, the *Mender*, *Shimar*, and *Thymbrek*, in the present times, discharge themselves, in a collective stream, into the Hellespont, (or Dardanelles); and the *fourth*, the *Bounarbashi*, into the Archipelago. And of these *FOUR* streams, *THREE* have by different writers been severally taken for the *Simois*, and as many for the *Scamander*.

But, in every system adopted for the arrangement of the rivers of the Troad, the *MENDER* has always been regarded as *ONE* of the *TWO* rivers that bounded the Trojan Plain: (that is, it was supposed to be either the *Scamander*, or the *Simois*: for it has been taken for both, in turn): and the dispute is reduced simply to this: "on *WHICH SIDE* of the *Mender* did the Plain of Troy lie?" The difference, at first sight, appears trifling: but the circumstances belonging to each of the systems, respectively, are very different indeed: and thence require much discussion. M. de Chevalier's system takes the *Mender* for the *Simois*, and the *Bounarbashi* for the *Scamander*; whilst we regard the *Mender* as the *Scamander*, leaving the *Bounarbashi* out of the question: and seek, with Demetrius of *Scepsis*,<sup>4</sup> for a *Simois*, on the *opposite*, or *eastern* side of the *Mender*. Our dissent from the opinion of M. de Chevalier, is *chiefly* grounded on the

<sup>4</sup> An ancient city of *Troas*, situated *within* the western chain of *Mount Ida*.

accordance, in point of character and description, of the Mender, with the Scamander of Homer; and the total want of accordance in the Bounarbashi.

The system of M. de Chevalier is founded on a *most erroneous* topography; in which, not only the *principal part* of the *extensive plain*, lying on the east of the Mender, is converted into a *hilly tract*; but a *river* and *its valley* are entirely omitted; and *others* of a *different name* substituted for them. And it is the river *so omitted*, that appears to have constituted the *Simoïs* of DEMETRIUS; as the plain, *so filled up*, is *HIS* Plain of Troy! After this, it becomes no matter of surprize, that M. de Chevalier should wish to under-rate the authority of Demetrius; so as scarcely to allow him to possess the ability of identifying a river, or a plain, even in the neighbourhood of his own residence. The reader is requested to compare the plan of M. de Chevalier, N°. III. with those of Mr. Gell, and Mr. Kauffer; and with Mr. Carlyle's sketch; N°. I. IV. and V. in the annexed map.

But let it be enquired, what was the opinion of STRABO, a person who had well considered the authority of Demetrius.

He says, (page 603,) "I think we ought *generally to rely* on the authority of Demetrius; a man of knowledge, and so enthusiastically fond of Homer, as to have written 30 books on about 60 lines of Homer's catalogue of the Trojan forces."

The opinions of certain modern authors, of great respectability, are no less in favour of Demetrius.

\* He was cotemporary with SCIPIO AFRICANUS, who visited the Troad, B. C. 190.

The celebrated M. Heyne of Gottingen (in the Edinb. Trans. Vol. iv. p. 76. Lit. Class) says :

“ Demetrius seems indeed to have a just title to belief  
“ and respect, as he was born in the neighbourhood of the  
“ Troad ; and had, in all probability, surveyed it himself.  
“ Our good opinion of him is confirmed, by the accuracy  
“ with which particular places are laid down ; and by their  
“ coincidence with the descriptions of ancient poets.

“ This author, however, gives rise to a still greater em-  
“ barassment, not so much respecting the situation of Troy ;  
“ *for it is assigned to what, in all probability, is its exact place ;*  
“ as in regard to the river *Scamander*, and its sources, which  
“ are thrown far back in the mountainous region behind  
“ Troy.”<sup>f</sup>

And Dr. Chandler (Hist. Troy, pages 1. and 52,) says,  
“ He (Demetrius) was a great philologist and grammarian ;  
“ of high reputation for learning : and especially noted for  
“ his study of Homer, and his topographical commentaries  
“ on the Ilias.—His curious researches give him a just title  
“ to be mentioned always with respect.”

After this, let the reader compare the style of M. Cheva-  
lier's criticisms, with that of the above testimonials. After  
mentioning the attempt of Strabo to reconcile Demetrius  
with Homer, on the subject of the fountains, attributed to  
the Scamander, in the plain ; he says, (Plain of Troy, English  
Transl. p. 59), “ This is certainly a very obscure and unsatis-  
“ factory explication : and Demetrius and Strabo are *equally*  
“ *censurable*, the one for his *negligence* in *committing* the

<sup>f</sup> It will, however, appear in the sequel, that the *Scamander* springs from  
mountains that are far removed from Troy.

“ *blunder* ; and the other for adopting it, and endeavouring  
“ to give it authenticity.”

Such is the modesty of the Gentleman, who produces an erroneous map, to prove his own system, in contradiction to Demetrius ; whilst the latter was doubtless in the right. The remaining part of the chapter is equally censurable, for want of decorum ; as well in the mode of speaking of *himself*, as of the two ancient authors : even on a supposition that he had himself been in the right.

In effect, Demetrius is slighted only by *those*, who could not make his system square with *theirs* ; although such systems may have been founded on deficient information, or on misconception.

It seems to be acknowledged on all hands, that the *place* of the *source* of the *Scamander* is the great *stumbling block* to the interpreters of the *ILIAD* ; owing to the different modes of translating the description of the two springs before the *Scaean Gate*. (*Iliad*, xxii. v. 148.) Some have supposed it to intend “ *The sources WHICH SUPPLIED the Scamander* ;” whilst others have translated it “ *Springs OF THE Scamander* ;” as appertaining to that river, either from their effecting a junction with it, or from the notion that they were derived from it. So that, perhaps, they ought rather to have been denominated *ADJUNCT STREAMS* to the *Scamander*, than the *REMOTE SOURCES*, or *HEADS* of that river.

Moreover, Homer says elsewhere, that the *Scamander* “ *descends from the Idaean heights*.”\* Demetrius, who certainly did not refer the two springs of Homer, to those of Bounarbashi (as he placed Troy in so different a position),

\* *Iliad*, lib. xii, v. 19. Cowper, v. 23.

derives the Scamander from *Mount Cotylus*, in the eastern chain of *Ida*: and is silent in respect of any of its sources in the plain. Hence one may conclude, that he understood the passage in Homer to mean nothing more than two *adjunct streams* to the Scamander; and not its *sources*.

Strabo, who follows him so far as to believe that "its source" "was not in the plain, but in the mountain;" accounts, in a most extraordinary manner, for the existence of the *cold* spring, (for no hot spring could then be found.) For he supposes it to be a portion of the water of the Scamander, forcing its way through a subterraneous channel, and again rising up to the surface of the ground.<sup>b</sup> This, at least, proves, that Strabo believed the source of the *main* river, to be *remote* from *Troy*: and at the same time, seems to shew how much the text of Homer, in this place, had perplexed him.

Homer surely had *Mount Cotylus* (that is *Gargarus*) in view, when he characterizes *Ida*<sup>i</sup> as abounding with springs;<sup>k</sup>

<sup>b</sup> Page 602. By this we learn that either Demetrius, or Strabo, had recognised a cold spring, in a situation which *they thought* was *proper* to the celebrated springs of Homer. So that travellers should enquire after it; as it might lead to some discovery.

There appears to be a difference of opinion, amongst the learned, whether Strabo ever visited the Troad in person. It seems probable, that he only sailed along the coast, from *Lectum*, and viewed the plain, rivers, and mountains, from *Sigæum*, or from the tumulus of Antilochus: as most of our modern travellers have done. Consequently, he must have derived the greater part of his information from the observations of others; and it is probable that the writings of Demetrius, "*the Field of Troy*," furnished all that relates to the interior of *Troas*, *Carasena*, &c. in the work of Strabo.

<sup>i</sup> See the map, compartment N°. VI.

<sup>k</sup> "*Spring-fed Ida, mother of wild beasts*," *Iliad*, lib. viii. v. 47. Cowper, v. 52. "*Ida's mount with rilling waters veined*," xiv. v. 283. Cowper, v. 332. and, again, v. 307. Cowper, 387. A number of sources descend from *Gargarus*.

because it suits that mountain, perfectly, but not the one opposite to the Trojan Plain, and to Bounarbashi; it having no *known* sources in it. Consequently, he can only be supposed to derive the *Scamander* from *Gargarus*.

With respect to the warm spring itself, as Demetrius could not find it, it would surely be vain for any one at present to attempt it: since he had, doubtless, opportunities of examining the ground in a closer and better manner than any one of our modern travellers could have done. It is a region subject to great earthquakes, the effects of some of which are on record. A spring of any kind is easily destroyed by such a convulsion: besides which, the changes that have probably taken place, during the lapse of ages, since the time of Homer, must be taken into the account.

---

There can be no doubt that the Ancients believed the war of Troy to have happened; as they speak of it as of an acknowledged fact in history: but then, they of course made a distinction between history and heroic poetry: and no more believed that Vulcan dried up the waters of the *Scamander* to please Thetis, than we, that the Duke of Marlborough's victory of Blenheim "swelled the Danube with floods of gore, which fell from the vanquished."<sup>1</sup> But, in effect, whether Homer adopted for the subject of his poem a *real event of history*, (as we certainly conceive he did), or invented a *fiction* for it, is not the point to be considered in this place; but whether his description of the scene of

<sup>1</sup> Addison's Campaign.

action, agrees with the site acknowledged by the Ancients to be intended for it.<sup>m</sup>

It is well known that Herodotus, Thucydides, and the historians of Alexander, have all spoken of the Trojan war as a matter of real history. But the statements and arguments of Thucydides are most to the point, in proof of the general belief of the Ancients, concerning it: for he reasons on it as on any other historical fact. It may not be amiss, in this place, to quote some of his opinions and observations on the subject. (Peloponnesian War, lib. I.)

“ Their power (that is, of the Greeks) by these methods gradually advancing, they were enabled, in process of time, to undertake the Trojan expedition.” —————

“ It is farther my opinion, that the assemblage of that armament, by Agamemnon, was not owing so much to the attendance of the suitors of Helen, in pursuance of the oath they had sworn to Tyndarus, as to his own superior power.” —  
 —“ To these enlargements of power, Agamemnon succeeding, and being also superior to the rest of his countrymen, in naval strength, he was enabled, in my opinion, to form that expedition more from awe, than favour. It is plain that he equipped out the largest number of ships himself, besides those he lent to the Arcadians.” —————

—“ We ought not therefore to be incredulous, nor so much to regard the appearance of cities, as their power; and of course, to conclude the armament against Troy, to have been greater than ever was known before; but inferior to

<sup>m</sup> Of those who have reported, on the subject of the Troad, Demetrius of *Scopsis* is the only one whose observations in *detail*, (preserved by Strabo,) have reached us: for those of Pliny, &c. apply to particular circumstances only.

those of our age." And whatever credit be given to the poetry of Homer in this respect, who no doubt as a poet hath set it off with all possible enlargement, yet even, according to his account, it appeareth inferior." —

—"On their first landing they got the better in fight; the proof is, that they could not otherwise have fortified their camp with a wall. Neither doth it appear that they exerted all their strength at once; numbers being detached for supplies of provisions; to till the Chersonesus; and to forage at large. Thus divided as they were, the Trojans were better able to make a ten years' resistance, being equal in force to those who were at any time left to carry on the siege.—In fact, they did not ply the work with all their number, but only with a part constantly reserved for the purpose: had they formed the siege with their whole force, in less time, and with less difficulty, they must have taken Troy."\*

Herodotus (in *Euterpe*, c. 113. *et seq.*) gives the answers of the Ægyptian priests, to his enquiries respecting Helen. They reported that Paris and Helen had arrived at a port of the Nile, in their way from *Sparta* to *Troy*; and that the King of Ægypt detained Helen, and the treasures plundered from her husband; but expelled Paris, as an infamous person. The result of these enquiries tends to shew, that although *Troy* was besieged and taken by the Greeks, yet that Helen (of course) was not found there. The father of history remarks, (ch. 118.) that "this circumstance could not be

\* Alluding to the Peloponnesian war.

° Dr. Smith's translation of *Thucydides*, Vol. I. pages 7, 8, 9, 10; edition of 1812. The Trojan war is again mentioned in lib. ii, regarding *Amphilochus*.

unknown to Homer; but as he thought it less ornamental to his poem, he forbore to use it. That he did know it, is evident from that part of the *Iliad*, where he describes the voyage of Paris—who after various wanderings, at length arrived at *Sidon* in *Phœnicia*.<sup>p</sup>

Herodotus concludes this subject by remarking, that the restoration of Helen was not in the power of the Trojans; and that the Greeks placed no dependance on their assertions, which were indisputably true: “but all this (says he) with the subsequent destruction of Troy, might be ordained by Providence, to instruct mankind that the Gods proportioned punishments to crimes.” (*Euterpe*, c. 120. Mr. Beloe’s translation.)

One cannot be otherwise than surprized, that any learned person should *altogether* slight these testimonies; so as even to doubt the existence of Troy itself: unless, indeed, he disbelieved the truth of ancient history generally.

The verses of the *ILIAD*, ever in the mouths of the Greeks, kept alive the remembrance of the events which they recorded; whilst the *tumuli*, dispersed over and about the plain of Troy, gave a character of reality to the scene of warfare, which the mere natural scenery of mountains, promontories, and rivers, though described ever so characteristically in the poem, could not of themselves, perhaps, have

<sup>p</sup> *Iliad*, lib. vi. v. 290 *et seq.*

“There stor’d she kept  
Her mantles of all hues, accomplish’d works  
Of fair *Sidonians* wafted o’er the deep  
By godlike Paris, when the gallies brought  
The high-born Helen to the shores of Troy.” *Cowper*, v. 326 *et seq.*

effected : so that the Ancients never lost sight of the subject. The Greeks and Ionians who were in the habit of visiting, or passing in view of the spot, on commercial, or other errands, had their curiosity awakened by these monuments, which forced themselves on their notice ; as well by their geographical position, as by their artificial form and bulk. The Macedonian dynasties which were afterwards established in Asia, by their founding the city of *Alexandria Troas*; still kept alive the memory of the events : and finally, the Romans, warmed by the fictitious story of their origin, adopted the inhabitants of the Troad for brethren ; and consequently interested themselves deeply in all that concerned the Troad.

From these circumstances taken together, the curiosity of the Greeks and Romans led them to collect the traditions still existing : and to examine the ground, with a view to refer to it the transactions recorded in the *Iliad* : and surely no poem ever interested mankind so much, and during so long a continuance.

These enquiries had the effect of impressing a firm belief, on the minds of the enquirers, that Homer's story had truth for its basis : each tumulus, as we learn from Demetrius, being appropriated to its proper hero : the rivers which bounded the "*deathless Plain*," being also discriminated ; as well as the bay and promontories, which marked the camp of the Greeks ; the Vale of *Thymbra*, and the chain of Mount *Ida*.<sup>3</sup> But the *precise site* of Troy was still unknown

<sup>3</sup> For instance, Pliny mentions, lib. xvi. c. 44, incidentally, the barrow or tumulus of *ILUS*, which had trees growing on, or about it ; and which probably he might have seen in his way through the *Troad*.

to Demetrius, although belief had attached itself to a particular spot: for the very ruins themselves being supposed to have perished,\* nothing that was sufficiently marked, remained for the judgment to fix on. It is most probable that the materials of the city had been removed: perhaps to *New Ilium* and *Alexandria Troas*, which were built long before Demetrius or Lucan wrote. But in the time of Alexander, and before the building of the latter of those cities, it is probable that enough of the ruins of ancient Troy remained to direct him to the spot: so that the report of its general site may well have been handed down to the time of Demetrius; an interval of no more than 150 years, at most.\* It appears certain, that even those who resided near the spot, about the time of Augustus, had lost all idea of the exact position, otherwise than by report; and the warm spring was absolutely unknown to Demetrius, nearly two centuries before our æra.

Nor have the moderns shewn less curiosity or industry than the ancients: but, obviously, they have pursued their object with fewer advantages. For many of the notices possessed by the ancients, must, of necessity, have been lost: and the severe restraints so long imposed by bigotry and tyranny, must have damped the spirit of enquiry; not to mention that the aspect of an inhabited and cultivated country, is continually changing. And although in

\* ——— *etiam periëre ruinæ.* (*Lucan's Pharsalia*, lib. ix.)

\* Although the city visited by Alexander was that of *New Ilium* (Strabo, page 593), yet we may conclude that he also visited the site of the ancient city: for unless he had gone over the whole scene of the *Iliad*, he could not have been so well qualified to decide on the merits of the historical and descriptive parts of the poem.

latter times, the restraints have been generally removed; yet, it has unfortunately happened, that a particular traveller (M. de Chevalier) having formed a system of his own, (plausible only from the erroneous statement of its topography, and of its hot and cold springs), nearly all of the succeeding travellers have confined themselves to his path, as if the question was set for ever *at rest*; instead of extending their researches to quarters not yet sufficiently explored.

Now, although every one reads the Iliad as a poetical romance, in respect of its machinery of deities, &c. yet he may believe, that, as it relates to the mere actions of men, the foundation of the story may be generally true, howsoever embellished: and such readers will, no doubt, be gratified to find, that so many of the descriptions in Homer agree with the ground itself. But it is unfortunate, that the ancient description of the landscape is too general; and that our present knowledge of it is less extensive than could be wished.

In order to make a just comparison of the description of the field of action of the Iliad (according to the scanty notices in Homer) with the actual topography, as far as the present state of our information goes; it becomes necessary, first, to enquire what were the ideas of the people, who lived and wrote at a period much nearer the date of the transactions; that is, Demetrius of Scepsis, Strabo, and Pliny; but more particularly of the former: and then to examine, how far the ground described by Demetrius, and referred to the present topography of the Troad, agrees with the notices in Homer. For, as Demetrius found the principal monuments described by Homer, whether natural

or artificial, still in existence, one may be satisfied that those descriptions were real: and that although we have not been able to discover all those monuments, yet that they did once exist, and may even exist at present, although they may have escaped our research. Therefore, by the intermediate assistance of Demetrius, more facts may perhaps be verified.

The including ridges of hills, and the rivers, as well as the greater part of the *tumuli*, are still recognised; and the record concerning them is clear and distinct. Nothing more therefore seems to be required, than an unbiassed interpretation of the text of the poem, and a reference to a more accurate topography: the application will then, it is presumed, appear perfectly clear and natural.

In the course of the disquisition, it is proposed to treat the subject in the following manner and order:

FIRST, to compare the ideas of the ancient geographers, and particularly those of Demetrius, with the actual geography.

SECONDLY, to enquire how far the descriptions in Homer, can be reconciled to Demetrius, and to the actual geography.

And LASTLY, what is to be collected from the ancients, respecting the position of the ancient City of Troy itself.

But in order to understand with more effect the descriptions given by Demetrius, whether quoted directly from him by Strabo; or presumed to be derived from him, and occurring in various passages of the same author; it becomes previously necessary to give a general idea of MOUNT IDA itself: since the chains of hills that encompass the Plain of Troy, and the whole scene of the Iliad, *originate in*, or are

*connected with, Ida.* And moreover, because the *largest* of the rivers, the *Scamander*, springs from the *most distant* range of *Ida*: thereby furnishing the direct means of discriminating it from the *other* rivers of the Troad, which spring from the ridge of *Ida*, nearest to the Plain of *Troy*.

## SECTION II.

## CONCERNING THE REGION OF MOUNT IDA.

IDA, a Region composed of three principal Ranges of Mountains; Gargarus; the Trojan; and Lectum—The second, which faces the Plain of Troy, has been commonly regarded as the great body of Ida, both by the Ancients and Moderns—Path of Juno—Strabo misapprehended the Subject of Ida, and the Courses of its Rivers, in the Report of Demetrius of Scepsis—Palæ Scepsis, Ænea, Polichna—Scepsis—Homer's Idea of Ida, appears to be correct—The Mountain of Gargarus, the same with Cotylus—Gives rise to the Scamander, Esepus, Granicus, &c.—Dr. Pocock's Idea of Ida, correct—M. D'Anville's the contrary.

IDA, as we collect from Homer,<sup>t</sup> is not merely a mountain, or even a single chain of mountains, but a *mountainous region*; extending, in its greatest length, from the Promontory of *Lectum* to *Zeleeia* (that is from Cape Baba to Biga); and in breadth, from the *Hellespont* to the neighbourhood of *Adramyttium*: so that it occupied, by its ridges and ramifications, the whole of the tract anciently called the LESSER PHRYGIA.<sup>u</sup>

Amongst a number of ridges or ranges, and irregular

<sup>t</sup> Iliad, lib. ii. v. 824. Cowper, v. 954: xii. v. 19. Cowper, v. 23: &c. &c.

<sup>u</sup> See the Map, N<sup>o</sup>. VI. The extent of Ida, from C. Baba to Biga, N E.-ward, is 80 G. miles: and in breadth, from N W. to S E. 30.

masses of mountains, of which it is composed, there are three ridges that are superior, in point of elevation, to the rest: and one of them eminently so. From their relative positions to each other, they may be compared, collectively, in point of form, to the Greek *Delta*; the head, or northernmost angle of which approaches the Hellespont, near the site of the ancient *Dardanus*; and the two lower angles approach the promontory of *Lectum* on the one hand; *Adramyttium* on the other.

The loftiest of these ridges, is that which forms the right, or eastern side of the  $\Delta$ ; extending S E.-ward, between the Hellespont, and the head of the Gulf of *Adramyttium*,<sup>\*</sup> and terminating in the lofty summit of *Gargarus*; called also, indifferently, *Cotylus*; and *Alexandrea*; and which overtops, in every distant view, the great body of *Ida*, like a dome over the body of a temple.<sup>y</sup>

The SECOND ridge, forming the left of the  $\Delta$ , runs parallel to the coast of the *Ægean* Sea, from N. to S. at the distance of six or seven miles. Its commencement in the north, is, like that of the former, near the Hellespont; and it extends far on, *towards* the Promontory of *Lectum*. In a general view from the west (See Mr. Gell's View, N<sup>o</sup>. XIX), it appears to extend *to* the promontory itself; although in reality it is separated from it by a wide valley, through which flows the *Touzla*, or Salt River.<sup>z</sup>

<sup>\*</sup> Called also the *Idæan Bay*.

<sup>y</sup> See Mr. Gell's beautiful and characteristic views, in his *Troy*, N<sup>os</sup>. XII. and XIX. The modern name of *Gargarus*, is *Kas-dagh*.

<sup>z</sup> Strabo mentions (page 605) the *Saline* of *Tragesæa*, near *Hamaxytus*, on the coast of *Troas*. This is, no doubt, the one now in use, at the mouth of

The THIRD ridge, forming the base of the  $\Delta$ , extends along the southern coast of the *Lesser Phrygia*, from the summit of Mount *Gargarus*, to the Promontory of *Lectum*; diminishing in altitude as it proceeds towards the latter (which Homer describes as the terminating point of Ida, on that side)<sup>a</sup> and which is, doubtless, the course of Juno, as described by him, in the same place. Mr. Hawkins says, that this ridge is not inferior in height to that which faces the Plain of Troy.

To prevent confusion, it becomes necessary to distinguish each of these ridges, by a particular name; and that of GARGARUS being already appropriated to the one which contains the peak of that name, it may perhaps be allowed to name the one that faces the Plain of Troy, and seems to appertain to it, in respect of *juxta-position* and *connexion*, the TROJAN IDA: and that which extends from *Gargarus* to *Lectum*, IDA LECTUM. The Author is aware that the western ridge has already been called, by some, *Ida Lectum*; but it being *separated* from the promontory, as before said; whilst the other is *continuous*, the whole way from the summit of *Gargarus*; and as it appears, moreover, to be the *poetical path* of Juno, under which consideration it has an *immediate reference* to LECTUM; there may perhaps be a propriety in calling this southern ridge by that name. If this be admitted, the three ridges, the eastern, western, and

the Touzla River, a league to the southward of *Alexandria Troas*. The agency of the *Etesian* winds, so oddly described by Strabo, was doubtless nothing more than that of raising the level of the sea, so as to overflow the margin, and fill the hollow plain within; where, in due time, it chrystallized. (See Map, N<sup>o</sup>. VI.)

<sup>a</sup> Iliad xiv. v. 284: Cowper, v. 333.

southern, will be respectively distinguished by the names of GARGARUS, The TROJAN, and LECTUM.<sup>b</sup>

Some of the most respectable authorities amongst the Ancients, and still more amongst the Moderns, have regarded the western range, or that over *Troy* and *Alexandria Troas*, as the *true* and *only* Ida; or they may have added to it a portion of the southern range.<sup>c</sup> This idea was probably taken up from a view of the mountains from the side of *Troy*, and of the coast opposite to it; or from the Hellespont: from which quarters, it was most frequently viewed; and from whence the whole appears as one range; the nearest hiding the others; save only the Peak of *Gargarus*, which ordinarily passes for a distinct mountain, unconnected with *Ida*.

Herodotus, Xenophon, and Strabo, evidently design by

<sup>b</sup> *Lectum* and *Gargarus* are clearly discriminated in the XIVth Book of the *Iliad*, v. 284, *et seq.* (Cowper, v. 333) on occasion of the ascent of Juno: who (accompanied by Sleep)

——— “ with gliding ease swam thro’ the air  
 “ To *IDA*’s Mount—at *LECTOS* first  
 “ They quitted ocean, overpassing high  
 “ The dry land, while beneath their feet the woods  
 “ Their spiry summits wav’d. There, unperceiv’d  
 “ By Jove, *SLEEP* mounted *IDA*’s loftiest pine—  
 “ Then swift to *GARGARUS*, on *IDA*’s top  
 “ The Goddess soar’d.”———

If it be insisted that the mountain immediately over *Troy*, is the true *Gargarus*, why should Juno, who came from the quarter of *Lemnos* and *Imbros*, land at *Lectum*, so far out of the way?

<sup>c</sup> Dr. Pocock is an exception. However, until the publication of M. Kauffer’s map, (though a *bad copy*), by Dr. Clarke and Mr. Cripps, the Public had the most incorrect ideas, possible, of *Ida* and the *Troad*.

Ida, the ridge towards Troy; or at least, they exclude *Gargarus*. The former, in describing the march of Xerxes, northward, from *Pergamus*, *Thebe*, and *Antandros*, to *Ilium*, makes him "leave Ida on his LEFT hand," that is to the WEST. (Polym. 42) Now the summit of *Gargarus* being little short of an English mile, in altitude (775 toises, French), what should have induced Xerxes to lead his army over such a ridge, when he might have gone a straighter and smoother road, by avoiding it; and after all, he must of necessity have crossed the *western* ridge, also, in order to arrive at *Ilium*?

Again, Xenophon says, (Anab. vii.) that in his way [southward] from *Ilium*, through *Antandros*, to *Adramyttium*, he crossed *M. Ida*. Of course, it must have been the *western* and *southern* ranges; as is done at present by those who travel from the Dardanelles to Eidermit, or *Adramyttium*.<sup>d</sup>

Strabo unquestionably refers the ideas of Demetrius, respecting the Mountain of *Cotylus* (i. e. *Gargarus*) and its rivers, to the TROJAN IDA; never supposing that the lofty mountain over *Antandros* and *Gargara*, was *Cotylus*, the

<sup>d</sup> Since the above was written, the Author has seen, in the second volume of Dr. Clarke's Travels, Mr. Walpole's route from *Alexandria Trous* to *Adramyttium*, over the *western* and *southern* ridges of *Ida*. He finds also the same route in Le Brun: and in M. Choiseul Gouffier's second volume.

Mr. Walpole's account of this short journey is highly illustrative of the course and nature of the two chains of *Ida*, which he passed.

The route in Le Brun, which led from *Adramyttium* to Papazli, Narli, Felampe, Lerissi, and Kemalli, to Koum-kala, appears to be that of the ordinary caravans; and we cannot but believe that Dr. Clarke misconceived the route of the caravan, given in his Vol. II. page 137, where he supposes it to have passed by the *east* of Mount *Gargarus*, or high *Ida*.

There is another route from Lerissi to Koum-kala, by way of Ene, and Bounarbashi.

*highest point of Ida*; from whence Demetrius derives the fountains of the *Scamander*, the *Esepus*, and the *Granicus*, (page 602). Strabo concluded that all these rivers sprung from that chain of Ida bordering on the Trojan plain, which he had in view from the sea coast; and which, it appears, was the *only* Ida known to him.\* Yet he describes the position of the *City of Gargara*, at 260 stadia to the eastward of the *Lectum* Promontory, with the Mountain of *Gargarus* above it: and he had before him, the distance of *Cotylus* from *Scepsis*, and of this latter from *Palæ Scepsis*, in the report of Demetrius. But it appears clearly that he was not in the habit of subjecting his *written* geography to the test of tabular construction; whence, in some cases, its accuracy and consistency, were never put to the proof.

Conceiving, therefore, that the highest part of the *Trojan* Ida, or of the ridge next to him, was the *Cotylus* of Demetrius, Strabo referred (p. 603) the positions of *Palæ Scepsis*, *Ænea*, *Polichna*, and the Silver Mine (all of which were really situated under that part of the Trojan Ida), to *Cotylus*. But *Cotylus* lay 20 or more miles farther to the eastward; and belonged to a different chain of mountains. He also describes the *Æsepus* River, to be no more than 30 stadia from *Palæ Scepsis* (p. 603); although it is described by Demetrius to flow from *Cotylus*, towards the *Propontis*; or to the opposite quarter from the Troad.

*Eski* Skupchu, or *Old*† Skupchu, was found by Dr. Pocock, and other modern travellers, at the eastern foot of the highest part of the Trojan Ida; seven or eight miles to the eastward of *Alexandria Troas*: and this is universally allowed

\* See the first note to page 7.

† *Eski* being the Turkish word for *old*.

to be the *Palæ Scepsis* of Strabo. At a few miles to the northward of it, is also found *Ene*, taken for the *Ænea* of Strabo, given at 50 stadia from the former. Again, a silver mine, said by Strabo to lie between *Palæ Scepsis* and *Polichna* (which two places are said by him, page 603, to be near each other) is also found within two miles of the former. Here then are three points of comparison: and as the village of Balouk-li is also found *near* Eski Skupchu, one may conceive this to be *Polichna*, or *Polikna*; and the agreement between the ancient and modern geography will be still closer. (See the Map of the Troad, N°. VI.; and also M. Kauffer's Map of the same Tract.)

Now, the river mentioned by Strabo, at 30 stadia from *Palæ Scepsis*, could not be the *Æsepus*; which, as we have seen, rises in Kasdagh, or *Gargarus*, and flows to the *eastward*, and into the *Propontis*; but must be the Mender (*Scamander*) which flows *westward* from the same mountain; and really passes at about the aforesaid distance from Eski-Skupchu: or in other words *Palæ Scepsis*. One must therefore suspect that the name *Æsepus* has been *interpolated*, and that *Scamander* stood in the original of Demetrius; but that it was altered, from an idea that the context required it. Strabo indeed says (page 602,) that the *Scamander* rises in the mountains; but he probably thought those mountains belonged to the *Trojan* Ida.

With the above clue, one may trace the error of Strabo, respecting the position of the mountain, which gave rise to the *Æsepus*, *Scamander*, and *Granicus*; and without which, the useful part of his information, respecting this quarter, would be lost. Therefore, what he says respecting *Ida*, has

a reference to the chain of mountains over *Ilium* and *Alexandria Troas*: and that, respecting *Cotylus* and its rivers, *Carasena*, &c. &c.; to *Gargarus*, and the tract lying to the eastward of it.

*Scepsis* is said (Strabo, page 607) to be 60 stadia from *Palæ Scepsis*;§ but no line of direction is given. It may be conceived to lie towards *Cotylus*, or *Gargarus*; as the whole distance between *Palæ Scepsis* and *Cotylus*, is given at 180 stadia: (that is, 60 to *Scepsis*, and 120 thence to *Cotylus*;) whilst the distance on Kauffer's map is  $6\frac{2}{3}$  French leagues, or about 20 B. miles, from Eski Skupchu to the *hither foot* of Kasdagh, or *Gargarus*. The 180 stades, if taken for Roman, are equal to about 21 such miles; but if on Strabo's scale (of 700 to 1°.) to 18 only. The difference, in either case, is not so great, as to destroy the probability of Kasdagh and Eski Skupchu being the places intended; since the reports of so many persons, worthy of credit, have established the fact of the distance, and of the circumstances of the ground; as Dr. Pocock, Messrs. Kauffer, Carlyle, Hawkins, Clarke, &c.: all of whom agree, that the Mender flows from Kasdagh (the loftiest summit of Ida, situated over *Adramyttium*, and the site of *Antandros*; &c.) westward to the Plain of Troy; and to the *Hellespont*.

Homer, when he derives not only the *Scamander*, but the *Æsepus* and *Granicus*, &c. also, from Mount Ida,<sup>h</sup> could only

§ The Latin translation of Casaubon has, erroneously, *forty* instead of *sixty*.

<sup>h</sup> *Iliad*, lib. xii. v. 19; (Cowper, v. 23) where he makes the *Æsepus* and *Granicus*, &c. which flow from the *eastern* side of Ida, and into the *Propontis*, *turn back over the tops of the mountains, that give rise to them*, to assist in the demolition of the Grecian rampart. This appears to be a most extraordinary license, considered even as a poetical one.

intend the eastern ridge. He knew the geography well, and extended the region of Ida from *Zeleeia*, near the *Propontis*, to the Promontory of *Lectum*, in *Troas*; and, therefore, it is probable, had remarked the principal features of it, on every side. But it may be also, when he describes the ascent of Juno, that he only spoke to the eye; and as the landscape would have appeared to a spectator in the Trojan Plain; since, viewed from that side, the Promontory of *Lectum* appears to be a continuation of the Trojan Ida, the wide valley that separates it, being shut up, in the perspective.<sup>i</sup>

On the whole, then, it appears, that the *Cotylus* of Demetrius, was the *Gargarus* and *Alexandrea* of Strabo; and that it answers to the Kasdagh of the present time; the highest peak of Ida: and situated opposite to the head of the Gulf of *Adramyttium*. As also, that the Mender flows westward from the same mountain, through the vallies of Ida, into the Trojan Plain; and therefore answers (as will presently be shewn) to the *Scamander* of Demetrius: it being, moreover, joined by the way, by a river from the N E. answering to the *Andrius* of Strabo, from the quarter of *Carasena*: (page 602) And finally, that Herodotus, Xenophon, and Strabo, evidently exclude from their ideas of Ida, the mountain and ridge of *Gargarus*: in which they were followed by the modern travellers, Pocock alone excepted; until the date of the late researches of the French gentlemen, resident at Constantinople.

<sup>i</sup> See Mr. Gell's Views, in his *Troy*, Nos. IV. V. and more particularly No. XIX, from the *Tumulus* of Antilochus. The sharp-peaked mountain in the nearest range, seen a little to the right of *Gargarus*, appears to be the *Gargarus* of Captain Francklin, and others who considered the western ridge as the *only* Ida.

M. D'Anville was totally mistaken, in his ideas of the geography of Mount Ida, and the courses of the rivers of the *Troad*. And this may serve as a proof of the total misconception that must have prevailed in those times respecting *Ida* and *Troas*: since HE was likely to be the best informed of any one, on such subjects.

He places *Cotylus* nearly in the parallel of Troy; although it be nearer that of the *Lectum* Promontory: and at the distance of only 20 MP. from Troy, although it be 30. But following Demetrius, he derives the *Scamander*, *Æsepus*, and *Granicus*, from *Cotylus*. However, from the difficulty of believing that the source of the *Scamander* was so far distant from *Scepsis*, as is represented by Demetrius, he places *Cotylus* too near to Troy; and *Scepsis* on the *further*, or *eastern* side of *Cotylus* (*i. e.* *Gargarus*); thus reversing the order of things, as may be seen by comparing the geography of the *Troad*, in his Map of Asia Minor, with ours in N°. VI. founded on the authority of M. Kauffer, &c. M. D'Anville has also followed Strabo, in supposing that there were no other ridges of *Ida*, save the one facing Troy. So that he has placed *Scepsis* in respect of *Ida Gargarus*, as it really stood, in respect of the *Trojan* *Ida*.

Had *Scepsis*, *Palæ Scepsis*, *Polichna*, &c. been where M. D'Anville has placed them, they would not have been in *Troas*, as they confessedly ought to be; but in *Carasena*.

But it is however, certain, that by his deriving the *Scamander* from *Cotylus*, he meant to follow the opinion of Demetrius: and that he had no idea of its springing from the Plain, in front of Troy, according to the system of M. de Chevalier.

## SECTION III.

A COMPARISON OF THE REPORT OF DEMETRIUS OF SCEPSIS  
WITH THE ACTUAL TOPOGRAPHY OF THE TROAD.

*Description of the Plain of Troy, by Demetrius—It seems to agree generally with the actual landscape—Aids derived from Mr. Gell, in the application of the above description—The Scamander of Demetrius answers clearly to the Mender; and the Andrius River, its Adjunct, to the Lidgex of M. Kauffer—Districts of Cebrenia and Carasena—their position—Ridge which divides the Scamandrian, from the Simoïsian, Plain, recognized—The Ancients right, in respect of the general position of Ancient Troy—The adoption of the erroneous System of M. de Chevalier, has arrested the Progress of Enquiry in the proper quarter—Means of rectifying his Errors, furnished by Mr. Gell—and by Professor Carlyle—The Shimar River pointed out by the latter, formerly recognised by Dr. Pocock; and now by Dr. Clarke—Supposed Tumulus of Myrinna or Batiæa—Position of New Ilium, from Ancient Documents—The different Courses of the Shimar, in Summer and Winter, accounted for—The Shimar, doubtless the Simoïs; as the Mender the Scamander—Many ancient Names of Rivers preserved in Asia Minor—The Kalli-colone, or beautiful hill, recognized in the hill of Atchekui.—Bouinarbashi Hill, the site of some Ancient City.*

HAVING given a detailed account of the geography of the principal members of Ida, which have so close a connexion with the subject of Troy, we proceed to give the remarks of

Demetrius, on the supposed scene of the *Iliad*: the general scope of whose information is as follows: (Strabo, p. 597).

“From the tract of [Western] *IDA*, two *Elbows*, or projecting ridges of the mountain, extend themselves towards the sea; one in the direction of *Rhoeteum*, the other of *Sigæum*:<sup>k</sup> and bending in a semicircular form, include within them both the *Simoisian* Plain, through which flows the *Simois*: and also the *Scamandrian* Plain, which is, in like manner, watered by the *Scamander*: which latter Plain, is also named the *Trojan*, or *Iliæan*.”<sup>1</sup>

“The terminations of these mountainous (or hilly) projections, in the plain, are at about the same distance from the sea,<sup>m</sup> as the *present Ilium*; which is situated *between them*, as the site of the *Ancient Ilium* is between the places of their commencement [near *Ida*].”

“The *Scamandrian* Plain is the broadest of the two; and in it most of the battles, described by the poet, were fought. *In it, we are also shewn the Erineus, the barrow of Æsyetes, the Baticea, and the Monument of Ilus.*”

“The rivers *Scamander* and *Simois*, the latter by directing its course towards *Sigæum*, and the former towards *Rhoeteum*, unite their streams, a little in front of the present [i. e. the *New*] *Ilium*: and the confluent stream discharges itself

<sup>k</sup> See the Map, compartments N<sup>o</sup>. I. and II.

<sup>1</sup> When the Grecian army was first marshalled at the ships, and marched towards the Plain of Troy, it was said (lib. ii. v. 465. Cowper, v. 526), that they were in the *Scamandrian Plain*. This was, of course, below *both* of the confluences; and Homer no where speaks of a *Simoisian* Plain, as distinct from the *Scamandrian*. It is Demetrius alone, who distinguishes the Plains.

<sup>m</sup> By the *Sea*, the *Ægean* only can be intended.

towards *Sigæum*: forming first the *Stoma-limne*, or *Lake of the Mouth*."

"Finally, a narrow ridge divides each of the above Plains from the other; beginning near the present Ilium, and reaching as far as *Cebrenia*; forming the shape of the letter T towards the above hilly projections, as it joins to either side."<sup>a</sup>

"The village of the Ilieans, where ANCIENT ILIUM, or TROY, is supposed to have stood, is 30 stadia from the present Ilium." (In page 593, it is said "*towards the East, and Ida*.") "And beyond that, at 10 stadia, is the *Kalli-colone*; near which the *Simoïs* flows, at the distance of five stadia." [Strabo, page 597].

This description (as far as it can be understood, by comparing it with the actual topography) seems to be allowed to be just, even by M. de Chevalier, and by those who have adopted his system; the application of the names of the rivers excepted.\*

The projecting ridges from Ida, described by Demetrius, which envelope the scene of the Iliad, are easily understood to mean those two ranges, between which the Mender and its branches flow, in their course to the *Hellespont*: the range on the south detaching itself from that part of Western Ida, over Bounarbashi, and terminating at Erkessi-kui; and that from the north, which, separating the Valley of Thymbrek (*Thymbra*) from the coast of the *Hellespont*; has its termination at the promontory, on which the tumulus of

<sup>a</sup> This cannot well be understood, for want of a more detailed, and *more accurate topography* of the hilly tract towards Ida.

\* See again in the Map, compartments N°. I. IV. and VI.

In Tepé, (or of Ajax) stands : anciently *Rhoeteum*. It will appear, by Mr. Gell's distinct and beautiful view, N°. XIX. (from the *Tumulus* ascribed to Antilochus) that the general appearance of the landscape, justifies the description given by Demetrius : nor is there any other spot near the *Hellespont*, that resembles it, in any degree.

With respect to the distinct course of each of the *two* rivers, previous to their junction near *New Ilium*, the description agrees well with the supposition, that the Shimar was the *Simoïs*, and the Mender, the *Scamander*. For, it is naturally understood that, previous to their intercepting each others course, the river which pointed towards *Sigæum*, must have been the eastern one, or that to the *right*, which would answer to the *Shimar* : and the one which pointed towards *Rhoeteum*, the western, or left hand river ; which agrees to the *Mender*.<sup>p</sup> It may indeed be said, that the same result might have been produced by the Mender and Bounarbashi rivers ; the former considered as the *Simoïs*, and the latter, as the *Scamander* : but it does not appear so probable that the Bounarbashi River ever ran near New Ilium, as that the Mender did.

Much more conclusive, however, respecting the identity of the *Scamander*, is the testimony of Demetrius concerning the source of that river, in the distant mountains near *Antandros* (Strabo, page 602) ; and its western course from thence to the Troad ; since, in that course, it is said to separate the country of *Cebrenia* from that of *Scepsis* : a circumstance that can apply only to the Mender ; which really

<sup>p</sup> M. de Chevalier translates Strabo differently ; conducting the *Scamande* towards *Sigæum*, the *Simoïs* towards *Rhoeteum*. (Eng. Transl. p. 63.)

takes a westerly course, between countries which alone can be taken for *Cebrenia* and *Scepsis*.<sup>a</sup> This circumstance therefore, appears decisive of its being the *Scamander*, intended by Demetrius.

It is also said by Strabo, page 602 (and doubtless on the same authority of Demetrius) that the river *Andrius*, from the quarter of *Carasena*, joins the *Scamander*. *Carasena* was a country that bordered on *Dardania*, and extended to *Zeieia*: consequently, the *Andrius* answers to the *Lidex* of Kauffer's map; which joins the Mender, in the heart of Ida, and has most of its sources from the mountains adjacent to *Carasena*: that is the chain of eastern Ida, or *Gargarus*. (See Kauffer's Map of the Troad: and N°. VI. of the Map belonging to this Tract, which is founded on it.)

It may also be remarked, that the river of Bounarbashi, the *Scamander* of M. de Chevalier, has no adjunct stream whatsoever: nor could it receive any from the quarter of *Carasena*, because the Mender interposes. Consequently, the Bounarbashi River cannot, consistently with this account, have been the *Scamander* of Demetrius. And this particular, the reader is requested to bear in mind.

It also appears, that the *Scamandrian* and *Simoisian* plains of Demetrius, were separated from each other by a ridge of elevated land, or low hills, which commenced near the modern Ilium, and extended upwards (eastwards) to *Cebrenia*: that is, to the foot of the *Trojan* Ida; and to the two hilly ridges that embraced the *Troad*. But no high land

<sup>a</sup> For *Cebrenia* bordered on Ancient Troy; and by the context, (Strabo, page 597) lay to the eastward of it: *Scepsis* to the south, and south east. See again, N°. VI.

is found within the tract, between the Mender and Bounarbashi Rivers: the Trojan Plain of M. Chevalier.<sup>r</sup> Such, however, *is found*, on the opposite, or eastern side of the Mender, and between that river and another to the northward of it, named *Shimar*, by some; by others, *Simores*.

As this river presents quite a new feature in the *recent* Topography of the Troad (though not, it seems, unknown, in earlier times) it will be necessary to introduce it, with considerable detail, to the notice of the reader.

Previous to the promulgation of the new system of M. de Chevalier, the Moderns (as the Ancients had done), sought the site of TROY, on the *east*, or *Idæan* side of the Mender; concluding that the Shimar, or Simores (the next river in that direction) as well probably from the name, as from the relative situation, was the *Simoïs* of antiquity. Sandys, Pocock, and Lady M. W. Montagu, all speak to this effect; and M. D'Anville adopted much the same idea. But M. Chevalier has turned the attention of travellers, almost exclusively, to the opposite, or *Ægean* side of the Mender: so that the progress of enquiry, on the *Idæan* side, where Demetrius believed Troy to have stood, has been completely arrested: each traveller appearing to vie with the other, in giving authority to M. de Chevalier's system; trusting implicitly to his topography, in despite of their own observations (Mr. Gell excepted), although M. de Chevalier had converted *a wide plain* into a *hilly region*; and placed Troy on hills,

<sup>r</sup> M. de Chevalier, in quoting the description of the Trojan Plain, &c. from Demetrius, *stops short* at the *ridge of high land*, described above in page 29. (See his description of the Plain of Troy, Eng. Transl. p. 62.)

although the poet had declared that it was situated in a plain.

And here it becomes necessary to repeat, (howsoever unpleasant the task) that the inaccuracies of M. de Chevalier's Map of the Plain of Troy, are so gross, as totally to mislead the judgment of his readers; *and to preclude the possibility of judging aright.*<sup>s</sup> For the map leaves only a *mere slip* of plain, on the east of the Mender; although Mr. Gell shews us, as well in his plan, as in the text of his book, that this Plain is by far the widest of the two. And on the other hand, M. de Chevalier has represented the Plain between the Bounarbashi and Mender, *out of all proportion*, the widest: and this is HIS Plain of Troy.

Again, he has *totally omitted* the river *Shimar* and its valley; and substituted for them, those of Thymbrek: whilst the places of the latter, are occupied by a hilly tract. Never, perhaps, did a series of errors so effectually combine to exclude truth. For who would look for a plain, in a place where no plain was represented to exist; or for the *Simoïs* in the Vale of *Thymbra*?

The plan of the Plain of Troy, by Mr. Gell (N°. XLV.), together with his View from the Tumulus of Antilochus (N°. XIX.) will sufficiently prove the truth of this remark. Besides which, he gives, in the text of his book, the clearest proofs of it, as may be seen by an extract in the note, at the foot of the page.<sup>t</sup> These remarks most fully prove the great

<sup>s</sup> See a reduced copy of it, N°. III. The reader is requested to compare it with M. Kauffer's on the *right*, and Mr. Gell's on the *left*.

<sup>t</sup> "A line drawn from Kalifatli to Koum-*kui* (it may be suspected that Koum-*kala* is intended), as the remark agrees only with that place) would leave the

extent of the plain on the *east* of the Mender, where M. de Chevalier does not admit the existence of *any* plain, between the mouth of the Thymbrek Valley and Atchekui: and it will be found that the several views, taken from different points by Mr. Gell, are in harmony with his Plans and Remarks.

Professor Carlyle, in 1800, traversed the ground of the Troad, and its adjacencies, in various directions (See N°. V). He visited Ene (*Ænia*) and the Springs of the Mender; and ascended Kas-dagh (the *Cotylus* of Demetrius), the highest point of Ida; from whence the Mender flows. (See N°. VI.) But, more to the present purpose, he went from Jenishehr (*Sigæum*) to In-Tepe, the Tumulus of Ajax, and thence to Koum-kui (See again N°. V.) From this place, he ascended the Valley of Thymbrek, to the village of that name; and from thence traced a most important line, to Bounarbashi; intersecting the upper course of the Shimar River; the position of Atchekui (the supposed *Kalli-colone* of the Iliad); and the course of the Mender: thus supplying, in some

hill of *Ilium Recens*, more than a mile to the east." (See A B in N°. I.) Again, "A line drawn from the mouth of the river, to the *Tumuli* above Bounarbashi, passes through the western point of the hill, where Kauffer places the City of Constantine; [though in reality, it was *New Ilium*] between which and the Mender is a *wide* plain." (See C D in the same N°. I.) "And lastly, the range of hills on which Chiblak is situated,\* does not, in any part, project so far to the south, as to interfere with a right line drawn from the Tomb of Antiochus to Atche-kui." See E F. (Gell's Troy, page 113.) Koum-kala and Koum-kui have already been distinguished.

---

\* Mr. Gell was not aware of the existence of the Valley of the Shimar; and therefore supposed the whole to be one mass of hills.

measure, what is wanting in Mr. Gell's Map of the Troad. And finally, he traced another line from Koum-kui, to Bounarbashi, *direct*; intersecting the *winter course* of the Shimar.

From these interesting and useful routes, we learn that a *Torrent* River, under the name of *Shimar*, descends from the western front of Ida, and flows through a valley of its own, between the courses of the Thymbrek and Mender rivers; and nearly equidistant from both; and passing near to, and on the south side of Chiblak, enters the *great Plain* opposite to Kalifatli, through the opening of the valley seen in Mr. Gell's view, from the Tomb of Antilochus, (N°. XIX). Thence, according to Mr. Carlyle, it has *two distinct*, and widely diverging beds: the one during spring, and in ordinary seasons, when *low* in its bed, along the foot of the hill, of *New Ilium*; and thence, by Koum-kui, to a junction with the Mender, not far above the bridge of Koum-kala: "preserving its name of Shimar, the whole way.\* But during the season of its swelling, (in winter) it makes a pretty direct course to the Mender, at, or very near, Kalifatli.

It would appear, that neither Mr. Gell, nor M. Kauffer, knew, that the water-course which joins the Mender, at

\* It appears to separate, near the Bridge, into two branches; one of which joins the Mender, the other gains the sea, by a separate channel. For one branch was crossed by Mr. Carlyle *between* the *Bridge* and *In Tepe*: the other is crossed in the ordinary road, between the Bridge and Kalifatli.

\* Mr. Carlyle remarks that "after the junction of the *Shimar*, with the "Thymbrek River, the *larger stream* of the Shimar, communicates its name to "the confluent waters."

We learn from Strabo (page 598) that the *Thymbrius* River joined the *Scamander*; which latter, probably, at that time, ran under the site of *Koum-kui*: as the conflux of the *Scamander* and *Simoïs* was then near *New Ilium*.

Kalifatli, and which they also mark at Chiblak; (that is, the Shimar in question) was traceable any higher up; they considering it as originating at the latter place.

Captain Francklin, in company with Mr. Philip Hope, went nearly over the same ground with Mr. Carlyle, only that they deviated to the *south-east*, between Thymbrek-kui, and Atchekui; and getting entangled amongst the roots of Mount Ida, could not describe the line of their route, so exactly as could be wished.<sup>y</sup> No stream, or torrent-bed, is marked on their map, between the Thymbrek and Mender rivers: but Captain F. says (page 29 of his Tour), that, “during our tour of two days, from entering the *Kalli-colone*, “or chain of hills that constitute Mount Ida, until we “passed Troy [meaning Bounarbashi] to the south-west, “we found among the hills, the beds of *several torrents*.”—

In pages 9, 10, and 12, of the same Tour, the *Kalli-colone* is explained to mean the *hilly tract* that commences on the south of the Valley of Thymbrek, and extends to the River Mender: and not the *single Hill* of Atchekui. (See No. I. of the Map.) Of course, the Shimar must be understood to be included among those “*several torrents*,” as Capt. F. must of necessity have crossed it.

It is proper to observe, that Mr. Carlyle traced the Shimar, from the place where he intersected its course, at Eski, (or *Old*), Atchekui, to the foot of the western, or *Trojan* Ida;

<sup>y</sup> They ascended the Valley of Thymbrek, one mile beyond Thymbrek-kui, to the ruins of a *Doric* temple, at a place named *Thymbrek Muzarlik*; or the Cemetery of Thymbrek. They had previously visited the greater temple at Kalil-Eli; which Captain Francklin describes to have been of the *Corinthian* order; pages 8, and 9. More will be said respecting the position of the former temple.

$2\frac{3}{4}$  miles, in an E. b. S. direction. And at that place he found an aqueduct, that was built across it. Concerning this aqueduct, no particulars are known to the author.

Lady Mary Wortley Montagu, in 1718, viewed the courses and confluence of the Mender and Shimar. She names the latter of these rivers, Simores. Sandys (1610) does the same. He says, "Twixt these two capes, there lieth a spacious valley. Nearer *Sigæum* was the station for the Grecian navy: but nearer *Rhæteum*, the River *Simoïs*, (NOW CALLED SIMORES) dischargeth itself into the *Hellespont*—Two, not far disjoining vallies there are, that stretch to each other, and join in an ample plain.—Through *these vallies*, glide *Simoïs* and divine *Scamander*."

Both of these persons viewed the rivers from Jenishehr (*Sigæum*): and as the River of Bounarbashi, it may be concluded, had long before ceased to flow into the Mender, this latter river, together with the Shimar, must have been the two rivers intended. The vallies, "joining in an ample plain," must be supposed to be those of Thymbrek, and of the Mender: it being probable that Sandys concluded, that the Shimar, from the direction of the lower part of its course, came through the Valley of Thymbrek, which presented a wider opening than that of the Shimar; or Chiblak. (See N°. I. of the Map.)

We have been thus particular, here, in order to shew that the name *Shimar*, or *Simores*, so much alike in root to *Simoïs*, still keeps its ground in the Troad.

Most of the late travellers have continued the name of Thymbrek, (or Dumbrek) to the stream that descends through

the Valley of that name; *after* it has received the Shimar; and even to its junction with the Mender. Mr. Carlyle seems to be the only one, who, in our times, has made the distinction. (See note to page 35.) The rest might easily take it for granted, that the same name of Thymbrek was continued.

Dr. Pocock<sup>2</sup> traced the course of the Mender (which he calls the *Scamander*), downwards from Ene: then crossed the *high land* between the Mender, and the river, which he calls the *Simois*, not far above the *conflux*: and finally, the Thymbrek River, in his way to *Abydus*. It must be concluded, that his route certainly lay through Chiblak, Kalil-Eli,<sup>a</sup> and Erinkui: therefore, the *conflux* alluded to should be that at Kalifatli; which lay from  $2\frac{1}{2}$  to 3 miles on the left: that is, the west.

It may be remarked, that he calls the second river, the *Simois*: whether he meant to apply the supposed ancient name, as he had done before, that of *Scamander*, to the Mender; or that the name Shimar, or Simores, appeared so much like *Simois*, that he applied it accordingly.

These, although very general notices, yet from so honest and unbiassed a man as Dr. Pocock, are perfectly convincing, in respect of the *existence* of such a river as the Shimar; even had no other authority been adduced.

It was his idea that TROY had been situated on the *high land* just mentioned, between Bounarbashi and Chiblak:<sup>b</sup>

<sup>2</sup> Vol. II. part 2d, page 108.

<sup>a</sup> Or Halil-Eli.

<sup>b</sup> That is, of course, the *Pergama*, or Citadel: for the city itself stood either in the Plain, or on an easy slope. It is probable that Dr. Pocock actually passed over a part of its site, in the Plain.

following, probably, the ideas of Demetrius and Strabo, amongst the ancients, and those of most of the modern travellers, down to his own time.

Dr. Chandler saw the winter conflux, near Kalifatli; but unaccountably calls the Shimar, or Kalifatli River, the *Scamander*; and the Mender, the *Simoïs*; in the Map prefixed to his Travels in Asia Minor.

Dr. Murdoch Mackenzie (in May 1742) describes the river that passes by Koum-kui, and thence to the Mender, near the bridge of Koum-kala, under the name of Dumbrek. (Thymbrek): and says, that "it is thought to be the *Simoïs*." The river, he says, was "pretty deep; but rather a standing " than a running water: full of grass and mud."\* It must be recollected that the *Simoïs*, like the *Scamander*, was no more than a *torrent*; but Dr. Mackenzie speaks of the lower part of its course, through the *Alluvial Soil*.<sup>d</sup>

The ridge of elevated land between the Mender and Shimar Rivers, is described in Mr. Gell's Plan, N°. XLV. and certainly has an agreement with the Report of Demetrius.<sup>c</sup> Dr. Chandler, who was on the spot, says, that about

\* From MSS. in the possession of my friend, R. H. Inglis, Esq.

<sup>d</sup> Dr. Clarke has added the most complete testimony respecting the existence of this river, which he *names* from the village of *Kalifatli*; but considers it as the *Simoïs*. (Vol. 2, page 96.) His description is, that of a *torrent*. At the time he saw it, (March,) it was stagnant; forming deep holes, so as to be fordable only in particular places. He reckons it *not less* than the Bounarbashi River; but it is surely much larger: He perhaps spoke of the Volume of Water, *then* in it. It may be remarked, that as Dr. Clarke traced its course, where it takes the form of a *torrent*; so Dr. Mackenzie traced it through its *alluvions* lower down; and where its course was sluggish.

\* See above, page 29.

Kalifatli, there is a *swell of ground* that prevents a view of the *upper Plain* of the *Scamander*, from Jenishehr: for until he had advanced to Kalifatli, he was ignorant of the existence of any such Plain.<sup>f</sup> This swell appears to be a projection from the just mentioned ridge of elevated land.

Doctor Clarke communicated to Mr. Gell, his discovery of a Tumulus, in the Plain above Kalifatli: and which Mr. Gell supposes (we conceive with reason) to be that of *Myrinna*, or *Batiæa*. The description added, "that it was "connected with a rising ground of easy ascent; and insulated with regard to other eminences in the vicinity." (*Troy*, pages 56, and 117.) This *rising ground* is probably the *swell* noticed by Dr. Chandler.<sup>g</sup>

Doctor Chandler also saw, when near Kalifatli, two *Tumuli* in the Plain to the eastward; and a third on a brow to his left. He reports that he saw in his front, a little to the right of east, the channel of the Mender. Another river joined it in the Plain; and which he did not find in Mr. Wood's Map.—Before him, across the channel, and a little to the right, he saw the distant tops of two tall barrows, covered with green turf: and *behind them*, towards Mount Ida, was the large, conical, well formed hill, which he called *Kalli-colone*. Again, on his *left*, on the edge of the Plain, and on a brow, was a very conspicuous Barrow.<sup>h</sup>

<sup>f</sup> From a MS. obligingly communicated by a friend.

<sup>g</sup> Dr. Clarke also noticed a swell of ground, or lengthened mound; but this he describes to be situated on the *north* side of the Kalifatli River; for after tracing the mound, and observing two *tumuli* near it, he crossed the Kalifatli River, and then traced its *southern* bank, to Kalifatli Village. (See Vol. II. p. 93, *et seq.*)

<sup>h</sup> This seems to have been the one named by M. Kauffer the Tumulus of *Ilus*.

Of the two *Tumuli* in the Plain, the Doctor regarded the nearest, and that to the *left*, as the Monument of *Ilus*; the most distant, and to the *right*, as that of *Myrinna*, or *Batiea*. As they were seen in the line between Kalifatli, and the conical hill, (doubtless Atchekui), one of them, and probably that to the right, may well be taken for the *Tumulus*, pointed out by Doctor Clarke: and although no just idea of their distance, from Doctor Chandler's station, can be collected, yet from the circumstances of the description, they were probably not far off.

The place of conflux of the two rivers, in the time of Demetrius, is easily *approximated*, since it is given in a general way, in respect of *New Ilium*, a known position in the present geography. For as it is said that the conflux was a little in *front of* New Ilium, one may conclude that it was at no great distance from it; and probably within a mile.<sup>i</sup>

New Ilium is thus placed. In the Antonine Itinerary it is given at 12 Roman miles from *Dardanus*, which was itself 9 from *Abydus*. total 21 MP. equal to 15 G. miles in direct distance from *Abydus*. And from *Alexandria Troas*, it was 16 MP; both in the Itinerary, and in the Theodosian Tables; and these are equal to  $11\frac{1}{2}$  G. miles, direct. And finally, it was 12 stadia from the nearest part of the sea coast, (that is, the bay formed by the Promontories of *Sigæum* and *Rhæteum*), in the time of Demetrius.

The total distance between *Abydus* and *A. Troas*, is therefore given at 37 MP; equal to  $26\frac{1}{2}$  G. miles direct: and on

<sup>i</sup> See above, page 23.

the construction,  $25\frac{1}{2}$  are measured ; so that the difference is small. And the 16 from *Alexandria Troas*, or  $11\frac{1}{2}$  G. miles ; agreeing with the position of the hill, at about a mile to the S. E. of Koum-kui, where there are great ruins ; and also inscriptions,<sup>k</sup> which are said to identify them, as being those of *New Ilium* ; no doubt can remain. And with respect to its distance from the coast, which is now nearly two miles, the difference between that and the 12 stadia, may well be accounted for, by accretion, in the course of nearly 2000 years. In effect, there is no other position that suits it : and that it was on a *hill*, or elevated ground, we learn from Strabo, page 599.<sup>l</sup>

The place of conflux, then, in the time of Demetrius, was *near* New Ilium ; but in what direction it lay, is not mentioned : however, be it where it might, it affords a proof that the Scamander, in ancient times, ran on the side of *Rhæteum* ; otherwise it could not have *approached* New Ilium.

It has appeared, in page 35, that, at the present day, the

<sup>k</sup> See Mr. Gell's *Troy*, page 117.

<sup>l</sup> Dr. Clarke (Vol. II. p. 102) visited the ruins of a magnificent city, named by the people of the neighbourhood, *Old Kalifatli* ; and which are undoubtedly those of the *New Ilium*. But we are unable to trace him on the Map ; and consequently to fix on the spot ; which is greatly to be regretted. He says that it was at a short distance to the eastward of Kalifatli. New Ilium, in Kauffer's Map, is about  $1\frac{1}{4}$  ; in Gell's about  $1\frac{1}{2}$  mile, to the N.E. of Kalifatli : and therefore, has a general agreement with the report. But the Doctor's Map places it 3 miles to the N. E. of Kalifatli.

Shimar, at different seasons, joins the Mender, at different points of its course. Whether this was the case, anciently, cannot now be known: but by the progress of Achilles during the pursuit, after the *last* battle; as well as by the circumstance of the goddesses' alighting at the conflux, to view the *first* battle, fought near the Tomb of Myrinna, (which was itself not far from the *Scæan* Gate of Troy), one must suppose the conflux to have been at that time, much higher up than the site of New Ilium.

The cause which produced the double course, might not then have existed: that is, the raising of the level to a sufficient height, by alluvions. To make this understood, it is necessary to repeat, that the conflux at Kalifatli, according to Mr. Carlyle, exists only during the seasons of floods in the Shimar; and when its bed is filled: for then, as is known by experience, from other rivers of the like kind, it may have elevation, bulk, and force enough, to make its way *direct*, through a bed, partly choaked up by sands; but which in its low and weak state, it has neither weight nor velocity enough to remove: and is therefore compelled to seek a *lower level*, through a more circuitous track. More will be said on this subject hereafter.

The name SHIMAR or SIMORES, as is said above, has doubtless a similitude, in point of *root*, with SIMOÏS: and when coupled with that of its adjunct stream, of the name of MENDER, seemingly the remains of SCAMANDER; who but must *suspect*, from the names alone, that these are the streams immortalized by Homer? And more especially, as there are found, in the same region, so many other modern names of rivers, that agree so nearly with the ancient ones;

as, Meinder for *Mæander*; Sackariah, for *Sangarius* and *Sagarius*; Tarsia, for *Tarsius*; Bartin, or Partin, for *Parthenius*; Falios, for *Billæus*; &c. &c. And as Demetrius and Strabo call the Rivers of the Troad by their *Homeric* names, without adding any others in explanation, one is warranted in supposing that they had preserved their ancient names, *to that day*, from the date of Homer, and the Trojan War: and if so, they must be regarded as completely identified, to the times of Demetrius and of Strabo.

It will be found in the sequel, that the descriptions and characters of these rivers, as given by Homer, go equally to prove their identity.<sup>m</sup>

---

We conceive, then, that the description, both of the Rivers, Plain, and intermediate ridge of high land, by Demetrius, is made out, in our Topography: and that, after the above exposition, one can hardly doubt which two of the rivers; and consequently, WHICH of the included tracts between them, Demetrius meant to describe, as the scene of the Iliad. In forming his opinion, he had advantages superior to those which any one of our modern travellers could

<sup>m</sup> M. D'Anville (in an enlarged Map of the Troad inserted) in his *Asia Minor*, has both the Shimar and Thymbrek Rivers, as well as the Mender: which latter, he justly considers as the *Scamander*. But he takes the river which occupies the place of the *Thymbrius*, for the *Simoïs*; & *vice versa*. He probably had found out that the lower part of the Thymbrek was named Shimar, or Simores; and did not conceive that it was a continuation of the *intermediate* river, Shimar, joined with the Thymbrek. But how could this system be reconciled to the history of the warfare, at the ships; when a part of the Trojan army occupied the Valley of *Thymbra*, and extended its flank to the sea?

possess. He was a native, and resident almost on the very spot. His history proves him to have been enthusiastically fond of Homer's writings; and he had leisure to pursue his enquiries. And it cannot be doubted, that various kinds of notices, respecting the subject, must have perished.

In respect of the site of TROY itself, it has appeared (page 29), that he does not absolutely venture to place it; but only says that it was *supposed* to have been at the place where *then* stood the *Pagus Iliensium*, or Village of the Iliens, 30 stadia from New Ilium, to the eastward; and towards *Ida*; (Strabo, pages 593, 596, and 597); and between the places of commencement of the two ranges of hills, which inclose the Plain of Troy: as New Ilium did, between their termination, near the sea. As the subject will be fully considered in a separate Section, we shall only add, in this place, that Mr. Gell's View, N<sup>o</sup>. XXXIII. shews a hill in that position, which answers to the *Pagus Iliensium*; and which, in appearance, is suited to the idea given of the *Pergama*.

The *Kalli-colone*, or *beautiful hill*, is said by Demetrius, (See above, page 29), to be ten stadia from the Village of the *Iliens*, forty from New Ilium.\* Accordingly, the hill of Atchekui will be found to agree, as well in respect of distance from *New Ilium*, as in its general description: but there is

\* Strabo (page 598, from Demetrius) places the *Kalli-colone* 40 stadia from New Ilium: and in the preceding page, the same hill is said to be 10 stadia from the *Pagus Iliensium*; and this latter, 30 from New Ilium. Of course, the *Pagus* should have lain in the *direct line* between N. Ilium and the *Kalli-colone*. And, in page 593, this line of direction is said to be *eastward*, and towards *Ida*.

a point of agreement wanting in relative position ; which is, that it is not so near the *Simoïs*, as Homer and Demetrius represent it, if Mr. Carlyle's report of the upper course of the Shimar be correct. It is said, that Mars "fiercely excited the  
 "Trojans; standing, at one time, on *the top of the City*;  
 "and at another, running *by*, or *near* the *Simoïs*, upon *Kalli-colone*." And Strabo, p. 597, "Ten stades above the  
 "*Pagus Iliensium*, is a certain hill named *Kalli-colone*; *by*  
 "or *near* to which the *Simoïs* flows, at the distance of five  
 "stades."

Now, according to Mr. Carlyle's description of the course of the Shimar River, which is from E. b. S. to W. b. N. from the skirts of Ida, to the place where he crossed it, near *Old Atchekui*; the hill in question should be a full mile from any part of the Shimar.<sup>p</sup>

We state this difficulty, without knowing how to remove it. But it may possibly be, that the course of the Shimar, from the place where Mr. Carlyle crossed it, and thence traced it, upwards to the Aqueduct, (See above, page 36) may be *more northerly* than he supposed; and even so much, as to bring the Hill of Atchekui, within the distance assigned to the *Kalli-colone*, from the *Simoïs*.

The rest of the description is satisfactory. Many persons who have viewed it, have been struck with its appearance; it being completely insulated, and of the form of a flatted hay-cock. But it more particularly forces itself on the view

° Iliad, lib. xx. v. 51.

<sup>p</sup> It may be remarked, however, that it is *still farther* from the River *Mender*, the *Simoïs* of M. de Chevalier.

from the lower part of the Plain.<sup>1</sup> Therefore, the imagination of Homer, no doubt, on his first view of the scene, seized on it, to seat the Gods of Troy on: it being moreover, at the upper extremity of the Plain, and on a *rise*; whilst the rampart of the Greeks, on which Minerva sat, was at its lower extremity. According to the perspective views of it, in Mr. Gell's Troy, it may not unaptly be compared to our *Primrose Hill*.<sup>2</sup>

And here it may be remarked, that surely Homer meant to place the *Kalli-colone* within the same Plain, in which Troy itself was situated; and in which the battles were fought. But M. Chevalier assigns them different Plains! But, in truth, the person who would wish to be set right, should avoid all reference to M. Chevalier's statements, and consult those of M. Kauffer and Mr. Gell: the latter more particularly, as he enters much more into detail, of the part referred to, in N°. XLV. And in addition to this, he ought to consult the same Gentleman's views of the landscape from the different points; which, compared with the plan, will put him in complete possession of the ground.

There is little doubt, that there was either a city, or fortress, or both, on the hill above Bounarbashi; but Demetrius could not but have known all that the different European

<sup>1</sup> Dr. Chandler, who viewed it from Kalifatli, says, "a large, conical, well-formed hill, which I called *Kalli-colone*. (MSS.)

See the Views N°. xix. xxviii. xxix. xxxiii. and xxxvi.; but particularly xix. and xxxiii. from different quarters.

The name of this hill and village is spelt differently: Professor Carlyle has *Akshi-kui*: M. Kauffer and others *Aktché*; Mr. Gell and M. de Chevalier, *Atche*; and Captain Francklin *Atch*.

travellers know, concerning the remains of cities in the Troad. In like manner, surely, the *springs* at Bounarbashi must have been familiar to him, as to every other person in that quarter: and yet HE could find no springs that answered to those spoken of by Homer.

## PART II.

---

A COMPARISON OF THE TOPOGRAPHY OF TROY, &c. AS DESCRIBED BY HOMER, WITH THAT GIVEN BY DEMETRIUS;  
AND WITH THE ACTUAL TOPOGRAPHY.

## PART II.

### SECTION I.

COMPARISON OF THE TOPOGRAPHY AS DESCRIBED BY HOMER, WITH THAT BY DEMETRIUS; AND WITH THE ACTUAL TOPOGRAPHY.

*Homer appears to have studied the Scene of the Iliad—His Scamander agrees in Character and Description with the Mender: and totally disagrees with the Bounarbashi River—Proofs adduced, from the Iliad—The Simoïs less discriminated—Achilles when in pursuit of the Trojans, crosses the Scamander below the conflux—General Agreement of Homer's Description of the Plain of Troy, with that between the Mender and Shimar—The two Springs pointed out by M. de Chevalier, as the hot and cold Spring of Homer, proved to be both of the same temperature—The delusion attempted to be accounted for—Their appearance, altogether imposing—General Remarks.*

THE accuracy of Homer's Topography, in the *Iliad*, has been a theme of praise at all times. He would, of course, avoid topographical *details*, as being neither necessary, nor convenient: nor suited to the dignity of his Poem. It was, however, necessary, that a field should be marked out; and also set with objects, as points of rest, to assist the imagination. The boundaries of that field were rivers, which

were themselves to act a part in the drama. IDA, bearing the throne of Jupiter; with the city of Troy, and the *Kallicolone*, beneath it; terminated, in the perspective, the upper end of the field: the two Promontories, the Port and Camp of the Greeks, with Neptune, the lower end. The Tombs of *Myrinna* and of *Ilus*, are points on which he occasionally marshals the armies at either end: whilst certain intermediate objects, as the fords, the confluence, and the *Erineus*, mark the advance or retreat of the contending armies. The Tomb of *Æsyetes* is a point to reconnoitre from; the Vale of *Thymbra*, a military station. This description may probably be considered as addressed to people who knew the ground, and the objects within it, generally. And considering how many points of accordance there are, of the ground itself, with the descriptions in the Poem; one is warranted in believing that the Poet himself had traversed the field of his intended Poem: had marked the courses and confluence of the Rivers; the *Tumuli*; the Bay and Promontories; together with the bearing of the commanding ridge of IDA, and the HELLESPONT; on the whole scene. Probably too, he ascended Ida, and warmed his imagination with a view of the entire landscape, from *Lectos* to *Dardania*; the whole bordered by the *Ægean* and Hellespont; and terminated by the distant lands of *Lesbos*, *Tenedos*, *Samo-thrace*, and *Mount Athos*!

\* The following observations occur in the learned M. HEYNE's Remarks, on M. de Chevalier's Plain of Troy. (Edinburgh Trans. Vol. IV. p. 78, & 79, Lit. Class).

"The Poet cannot be read with pleasure, without a sensible representation of the face of the country."—"The main circumstance here, is the *general*

Although there are, as we have seen, in and about the Plain of Troy, FOUR rivers, which, at some former period, have collectively formed one *trunk* stream, under the name of *Scamander* (now Mender;)<sup>t</sup> yet it was not required, that the Poet should speak of any more than the two adjacent ones, which included the scene of action. If he is silent respecting the River of Bounarbashi, he is equally so with respect to the Thymbrek, or *Thymbrius*: the Valley alone being mentioned, as bearing on the action of the Poem."

As he speaks of no natural eminences in the Plain between his two rivers, save the *Pergama* of Troy, the *Kalli-colone* (or beautiful hill) and the *Erineus* (for the *Throsmos* can only be regarded, as the *ascent* from the Beach), one would be left to conclude, from him, that the remainder of the space, from the bank of one river, to that of the other, was an even Plain. If however, it be admitted, that Homer's Plain

"chart of the face of the country; and an establishment of *certain principal spots.*"

And DR. JOHNSON in his *Rasselas*:

"The business of a Poet is to remark general properties and large appearances:—he is to exhibit, in his portraits of nature, such prominent and striking features, as recal the original to every mind; and must neglect the minuter discriminations which one may have remarked, and another have neglected, for those characteristics, which are alike obvious to vigilance and carelessness."

It may be remarked, that in the department of geography, Homer could not venture to indulge his fancy; as being subject to detection, from the most ordinary class of critics.

<sup>t</sup> When the Bounarbashi joined the Mender, there were four.

<sup>u</sup> The *Thymbrius* River, and *that*, represented by the Bounarbashi, are not mentioned amongst the rivers of Ila, in lib. vii.: the *Scamander* and *S moïs* alone are mentioned on the Trojan side of Ida.

of Troy, is the same with that of Demetrius, his silence must be accounted for, on this head (if indeed it was at all necessary for him to speak of the ridge of high land that intersects it), because it was unfit for chariots to act on; or, in other words, considering how the contending armies were appointed, unfit for the armies at large to act on.

But, in effect, if the *Tumulus* pointed out by Mr. Gell, for that of *Myrinna*, or *Batiæa*, be really such (and nothing appears to the contrary), the high land does not reach low enough down, to affect the operations of the armies; as they never appear in the Poem to have been higher up than *Myrinna*. For the *swell of ground* spoken of by Dr. Chandler and Mr. Gell, seems to be too gentle in its acclivities, to occasion any impediment to the motion of armies, whether ancient or modern.

Homer's two rivers, *Scamander* and *Simoïs*, cannot be so well identified with those of Demetrius,\* as with the Mender and Shimar of the present day: and by their *characters and descriptions*, in opposition to those of the River of Bounarbashi; but even their names Mender and Shimar, combined with their *juxta-position*, must be allowed to have some weight in the argument.

But, unaccountably, the advocates for M. de Chevalier's system, have (in our conception) applied the characters of these rivers, perversely. Can it be doubted, in the first instance, that the *Scamander* is intended for the largest of Homer's two rivers? It is occasionally a *furious mountain torrent*, bearing all before it; at other times, a scanty stream, deeply seated, and such as would be diffused over the bottom

\* See above, page 28, *et seq.*

of a wide channel. And such is the description of the River Mender; whose *bed* is said to be 300 feet wide, and very deep.<sup>7</sup> But the River of Bounarbashi, the *Scamander* of M. de Chevalier, (is fed by regular springs from the edge of the Plain; and has no adjunct streams. "The Scamander" (says M. de Chevalier, Chap. IX.) "is but a *rivulet*, of about "15 feet broad, and 3 deep."<sup>8</sup> Captain Francklin says (page 35) It is "limpid and comparatively deep; running "in a channel 12 to 20 feet wide; till we lost it, in a morass." And the same again, page 40. The entire length of its course, from its fountains to the sea, is only 8 miles: and to what breadth soever it may spread out, in the marsh below, the size of the channel, above, must determine the volume of water. How, then, can *this* river pass for the *Scamander* of Homer; who styles it in different places, "*aweful flood*:" "*gulphay stream*,"—"vortiginous; from Jove derived."—"swift "*Scamander*,"—"eddy whirling flood"—"dizzy stream,"—all implying depth, capacity, and rapidity? And the effects described, are those produced by an occasional and furious torrent, at one season; as when Achilles combats it, in lib. xxi. v. 240: (Cowper, v. 283). But the battle in its bed, previous to its swelling, is descriptive of such a river as the Mender, in its *low state*; the indentations, or hollows in its

<sup>7</sup> Three hundred feet of breadth for the bed, seems to be the acknowledged dimensions; taken generally. Dr. Clarke says 130 *yards* at the bridge of Koum-kala; 200 feet at the fords.

<sup>8</sup> It may be said, that if the Bounarbashi was the river in which the Virgin dedicated herself to the god *Scamander*, it would have been difficult for her to appear in it with decency; and one is equally at a loss to know, how Julia could have been exposed to the danger of drowning in such a stream!

lofty banks, serving to conceal the fugitives. (lib. xxi, v. 25."  
 "So lurk'd the trembling Trojans in the caves of Xanthus'  
 "aweful flood." (Cowper, v. 32.)

But, independent of its *narrow dimensions*, the *description* of the Bounarbashi River (by Capt. Francklin, p. 35, & 40) does not give any such ideas. It is rather the reverse of *gulphy*, *aweful*, or *deeply imbedded*: for its character, taken at large, seems to partake more of the *beautiful*, than the *terrific*. It cannot be *deep seated*, because the country adjacent to its course, above its *former* conflux with the Mender, is generally a marsh. Moreover, a stream that has nearly the same body of water in it, at all times (springing from the Plain, and having no adjuncts: or that can only be affected by the rain water that falls near its banks,) has no *use* for a *deep* bed; which belongs only to a stream that varies much in its bulk; and which, oftentimes, requires a more capacious bed than at others. Such *have* the Mender and Shimar, but *not* the Bounarbashi.<sup>a</sup>

When Priam crossed the Scamander in his way to the tent of Achilles, no difficulty occurs; but when Achilles crossed it, during the battle and pursuit, it is an aweful flood: agreeing with the Mender, in its different states.

The circumstance of the elm tree, which falling, served as a bridge for Achilles, over the Scamander, has been directly applied to the Bounarbashi River. But a *tall elm* was not required for a rivulet of 12 to 20 feet wide!

<sup>a</sup> Captain Francklin applies a very characteristic phrase to the Bounarbashi River (pages 33 and 35), which is, "*deeply embower'd*:" the banks being covered with sedges, marsh-mallows, tamarisks, and rushes. He remarks, that these often concealed the water from his view.

The truth appears to be, that the river bed was, at that time, only *filling*.<sup>b</sup>

The *Simoïs* bears a much smaller part than the *Scamander* in the transactions in the *Iliad*: but when spoken of, it appears to have much of the character of the *Scamander*: that is, a *mountain torrent*. The difference seems to be, that it is smaller; and that its bed was not so frequently filled as that of the other.<sup>c</sup> But the constant recurrence of the *Scamander*, implies that the warfare lay chiefly on that side, where the Plain was broadest, according to Demetrius: and as this agrees with the actual topography, it furnishes a presumptive proof of the identity of the *Mender* with the *Scamander*.

When the *Simoïs* is swoln, in lib. xii. v. 22, (Cowper, v. 28), it is only in common with *all* the other rivers of *Ida*, that is overflows and sweeps the Plain:

<sup>b</sup> Perhaps the *Scamander* of Homer is never more characteristically marked, than on occasion of the Trojan fugitives plunging into it, previous to its great flood: (lib. xxi. v. 7.)

---

“ Other part

“ Push’d down the sides of Xanthus, headlong plung’d

“ With dashing sound, into his dizzy stream.”—

— “ They, struggling, shriek’d, in silver eddies whirl’d.” (Cowper, v. 9.)

And *Lycaon*, in v. 52,

---

“ fatigu’d

“ Till his knees fail’d with toil to reach the land.” (Cowper, v. 61.)

Can these descriptions be supposed to refer to a stream of three feet in depth, and sixteen to twenty in breadth, and not subject to floods?

<sup>c</sup> For it cannot be supposed otherwise, than that the *Simoïs* lay in the way between the Grecian Camp and *Troy*: and yet it is never said to have opposed an obstacle to the free passage of the Greeks, during their warfare.

——— “Simoïs, whose banks with  
“Helmets and with shields were strewed.”

When in lib. xxi. v. 308, (Cowper, v. 363) the Scamander calls for the aid of the Simoïs, to overwhelm Achilles, with his torrents, it shews, indeed, the Simoïs to be a torrent much of the same nature with the Mender, only smaller: and with its bed *empty*, whilst that of the Scamander was *full*, or filling. And even this comparative state of the two rivers, furnishes a presumptive proof, in favour of the identity of the Mender, with the *Scamander*, and the Shimar with the *Simoïs*. For the Mender, receiving supplies from various and remote quarters; and which have amongst them, at the same time, different kinds of weather, will oftener be filled than the Shimar; which springing from the *neighbouring skirt* of Ida, depends for its supplies on a very limited tract. (See the Map, N°. VI.)

When the Scamander thus calls for the aid of the Simoïs, the bed of this latter must either have been *empty*, or very *scantily filled*: or the words could have no meaning. If then, with M. Chevalier, the Bounarbashi is to be taken for the Scamander, and the Mender for the Simoïs, how could so formidable a flood be produced by the Bounarbashi *alone*, whose waters are ordinarily contained within a channel of 20 feet wide, and 3 in depth? Let it be remembered, however, that A FLOOD WAS PRODUCED; and that, without the aid of the Simoïs: therefore it could only have been produced by the Mender.<sup>d</sup>

<sup>d</sup> The author cannot but regard this particular as of great importance to the question: and therefore requests the reader to keep it in mind, as he advances.

There are no *data* in Homer for the place of the ancient conflux of the two rivers. Demetrius, it has been shewn, places it near *New Ilium*: by which it is proved that the Scamander must have kept a different course from the present; emptying itself more towards *Rhæteum*.

It would appear that Achilles, during his pursuit of the Trojans, after the last battle (lib. xxi.) crossed the Scamander; and that *below* the conflux, be it where it might: otherwise by what *road* could the Simoïs have come to it, when called? The *fords* of the Scamander, should have been near the Sepulchre of Ilus, (according to Priam's rout, in lib. xxiv.)<sup>c</sup>; but there is no reason to suppose that Achilles crossed so low down. He was in pursuit of a flying enemy, whose army had been drawn up, with its right extending to the Monument of Ilus (for it was on the *Throsmos*, lib. xx. v. 3.);<sup>f</sup> and who had probably been pursued to some distance, in the way towards Troy, before Achilles crossed the river. But there is a circumstance more in point, to the conflux: Juno and Minerva alight *at the conflux* (lib. v., v. 774)<sup>g</sup> with an intent *to interfere* in the first battle; in which the Trojan army was drawn up at the Monument of *Batiæa*, (or *Myrinna*), which stood in front of Troy, and not far from the

<sup>c</sup> Moreover, Hector, when disabled by a blow of a stone, discharged by Ajax, at the first attack of the rampart and ships, (lib. xiv. v. 434) is carried to the side of the Scamander; and revived by pouring some of its water on his face. The *fords* of the river were said to be at this place: and as the main object of visiting it, appears to have been to obtain water readily (as they carried him no farther) it may be concluded that the fords were not far from the scene of action; *i. e.* the Grecian Camp, and Fleet; nor, of course, from the *Tumulus* of *Ilus*.

<sup>f</sup> Cowper, v. 3.

<sup>g</sup> Id. v. 872.

*Scaean Gate*. One must conclude that the Poet would set them down, *near* the field, in which they came to take part: and consequently, that the conflux intended by Homer would probably have not been lower down, than the present one at Kalifatli.

It must be acknowledged, that he affords no such proofs of the identity of the Simoïs, with the Shimar, by its peculiar character, as he does of the Scamander, by means of a comparison with the Mender: and by an absolute contrast, which is found between it, and the Bounarbashi River. But other circumstances afford internal evidence, which may satisfy us.

No notice is taken of any fords of the *Simoïs*, or even of crossing that river, at any time, between the Grecian Camp and Troy. Hence, it must be concluded, that it was low in its bed, during the battles and marches: and which certainly happened during the last battle, by the circumstances before mentioned. Nor is there any intimation given by our modern travellers, of the swelling of this river, otherwise than by *report*, and by appearances; and it may therefore be concluded, that it seldom swells, except in the winter; a season in which none of them have visited the Troad.<sup>h</sup> It may also be recollected, that the warfare happened during the summer season.

Upon the whole, then, it may be allowed, that the characters and descriptions of the Rivers; the position of the Hill

<sup>h</sup> Dr. Clarke's description of it, Vol, 2, p. 96, shews that its nature was that of a *torrent*: for though stagnant, it was not every where fordable: but like most of those water-courses which only run, during the draining off of the rain-water, its bed was formed of deep pits and shallows.

of Atchekui, taken for the *Kalli-colone*; with that of the *Tumulus*, inferred to be that of Myrinna; the great width of the Plain, between the Mender and the Shimar, compared with that between the Mender and Bounarbashi (and which, moreover, has no *Tumulus* within it, as the history requires); all these circumstances combined, seem to afford evidence in favour of the idea, that Homer intended the same Plain for the scene of the Iliad, with that assigned to it by Demetrius.

The TWO SPRINGS before the *Scæan* Gate, described by Homer, were not recognized by Demetrius: but he could not, however, be supposed ignorant of the *series* of springs, at the foot of Bounarbashi Hill; *two* of which have been selected by M. de Chevalier.

Homer certainly did not intend to describe a *hot* spring; but one that was luke-warm, or *tepid*; though surely of a warmer temperature, than is expressed by 62 or 64 of Fahrenheit's scale (for all the different reports fall between these numbers.<sup>i</sup>)

"One of these springs," (says the Poet,) "flowed of a luke-warm temperature, diffusing smoke, as from a burning fire: the other was in the summer time, like hail, snow, or congealed water. Close to these fountains, there were broad and beautiful cisterns of marble, where, in peaceful times, the wives and fair daughters of the Trojans, used to wash their resplendent garments."<sup>k</sup> Lib. xxiv. v. 147, *et seq.*

<sup>i</sup> Mr Hawkins reports	-	-	-	63 to 64	} 63½
Captain Hayes	-	-	-	64	
Dr. Clarke	-	-	-	62	
Mr. Hobhouse, since	-	-	-	61	

<sup>k</sup> Doctor Gillies.

Here, then, the Poet intended to mark a *striking contrast* between the two springs: but, by every account,<sup>1</sup> not only the two, selected, but the whole series, are precisely of the same temperature; that is, *cold*.

Mr. Hawkins says, that 63 to 64 was the temperature of all the springs which he examined: the water (says he) was "equally *cold* in them all." And Dr. Sibthorpe, at the same time, says of the reputed warm spring, "it communicated to us no sensation of heat." Edinb. Trans. Vol. IV. p. 114, and 115. This was in the month of April.

Most of the persons who have visited these springs, during the milder seasons, were *told* by the *natives*, that the reputed warm spring was *really warm* during the coldest part of the winter. However, it does by no means appear, that there is any difference in the temperature, between the summer and the winter seasons. For it seems by Mr. Gell, page 75, that Doctor Clarke tried it in the coldest weather of the year 1801; and he reports it to be 62. (Vol. II. page 110;) whilst Mr. Hawkins reports 63 to 64, in April. And, in effect, the different reports between April and November, cannot be said to differ from those, in the coldest part of the winter; when the difference amongst Thermometers is considered. If any thing, they rather shew that the winter temperature is the coldest. M. de Chevalier indeed says (page 26) that in the latter end of September, he felt the water warm. Yet September is not a cold month in any climate.

<sup>1</sup> That is, by Mr. Hawkins, Doctor Sibthorpe, Mr. Gell, Doctor Clarke, Captain Hayes, Mr. Hobhouse, &c.

But is it to be conceived, that a deep-seated spring, cold in summer, should be warm in winter? If removed from the influence of the atmosphere, what should affect its temperature, *periodically*?

The truth probably is, that in the coldest part of winter the temperature of the atmosphere is *so much* colder than that of the reputed warm Spring, that the latter really feels comparatively warm to the touch; as also that a steam sometimes arises; which appearance may contribute as much towards exciting an idea of warmth, as the actual temperature. And as *one* of the Springs *alone*, emits a steam, whilst both are of the same temperature, at the place of discharge; this may well happen from the circumstance of its waters being confined within a narrower space, after ejection; and therefore, for a time, preserve nearly their original temperature: whilst those of the other Spring, being spread out, over a wide bason, receive the action of the air on their surface, and become colder. So that the water, as fast as it is ejected, is mixed with a large mass of colder water. For these appear to be the circumstances of the *two* Springs, usually denominated, the *warm*, and the *cold*. The experiments were made by immersing the thermometer in the mouths of the Springs.

There are not wanting, in every temperate climate, cold Springs that send up a steam in the cold weather of winter. The common remark, that certain springs are *cold* in *summer*, and *warm* in *winter*, is well known, and accounted for.

Still it may be objected, and with truth, that these are *above* the temperature of ordinary springs, in the parallel of 40°. For in the same parallel, near the sea-coast of Italy,

their temperature is only  $57^{\circ}$ .<sup>m</sup> (At New York they are said to be from 54 to 56 only.)<sup>n</sup> Hence the Springs at Bounar-bashi, are at least 6 degrees higher than might have been expected from the temperature, proper to ordinary Springs in that parallel.

But it appears that certain *deep seated* Springs are found to be considerably warmer, than those which have their origin nearer to the surface; whatsoever the cause may be. This may be illustrated by what is known in this island, and particularly in the environs of the metropolis; where several wells have of late years been worked, through the entire depth of the *stratum* of blue clay; which extends from 250 to 300 feet, at least, below the level of the Thames. Under this *stratum* is found a kind of *abyss*, containing sand and water; whose temperature, (at least, when it arrives at the surface,) is several degrees warmer than that of the *superficial* Springs; which is known to be regulated by the *mean temperature* of the incumbent atmosphere. This, according to the Register kept at the Royal Society's apartments in London, is about  $50\frac{1}{2}$  degrees of Fahrenheit: and is perhaps only a fraction lower, by the *registers* in general, throughout this quarter of the Island.<sup>o</sup>

<sup>m</sup> Sir Charles Blagden.

<sup>n</sup> An experiment of Dr. Nooth's, reported by the late Dr. John Hunter, in his "Observations on the Diseases of the Army in Jamaica:" &c. &c. p. 283.

<sup>o</sup> The mean temperature in London, is deduced from a register of Mr. Six's thermometer, kept in the open air: the mean of 16 years was  $50\frac{1}{2}$  degrees. Another series of observations, in the same place, with a common thermometer, during 23 years, was  $50\frac{1}{4}$ . That of Mr. Barker, at Lyndon, in Rutlandshire, gave the mean at a small fraction lower than Mr. Six's: a result, not at all improbable.

The springs of several wells, of the kind which penetrate the *stratum* of clay, are found to be 56°; which is therefore 5 or 6 degrees at least, above the mean temperature of the incumbent atmosphere. One of these was dug by Mr. B. Vulliamy, in 1794,<sup>p</sup> and still continues to overflow, though nearly 330 feet in depth. A second is at Richmond; and a third is the famous well, dug by Sir Thomas Page, in 1782, at Sheerness.<sup>q</sup> There are others, whose temperatures are not known to the Author: in particular that one of the great depth of 563 feet, dug by Earl Spencer, at Wimbledon Park.

The Springs at Bounarbashi, then, taken at the mean of the different reports, which is about 63°; whilst the mean temperature of the ordinary springs in that parallel, is reckoned at 57°, or six degrees lower; afford an example of much the same kind, with the *deep-seated* Springs here; and as they are said to be in Holland. And hence, there is nothing uncommon in the circumstance, as it relates to Bounarbashi: since a *stratum* of sand and water, under the like circumstances with the abovementioned, may also exist in that place.<sup>r</sup>

Dr. Hunter, however, from a register kept by Lord Charles Cavendish, in London, deduces a mean temperature of 49.196. (Obs. p. 279.) And it appears from several experiments, that the temperature of what may be called *superficial* springs, (in contradistinction to those from below the blue clay,) is about 49½°. It is remarked that “the observations from which the mean is taken, must generally contain more of the extremes of heat than of cold; as the former happen in the day time, and the latter in the night; in consequence of which they will often escape notice.” (Obs. p. 279.)

<sup>p</sup> See Phil. Trans. for 1797.     <sup>q</sup> Ibid. for 1784.

<sup>r</sup> Dr. Shaw reports that the wells in *Wadreag*, on the edge of the Great

But to return more immediately to our subject, it is a CONTRAST that is sought for, as well as a WARM SPRING; and those in question, are both of the same temperature: that is, COLD. For Mr. Hawkins has said, that the water was "*equally cold in them all:*" and Dr. Sibthorpe, that the reputed warm Spring "*communicated to them, no sensation of heat.*"

It must at the same time be allowed, that the appearance of the reputed warm Spring, in respect of its massy blocks of marble, and other stones, is very imposing; and the circumstance of the one smoking in winter, whilst the other does not, (if this really be true), is likewise calculated to persuade ordinary people, that one Spring is *warm*, whilst the other is cold. But appearances cannot supply the want of WARMTH, in one, to form a *contrast* with the other.

There is little doubt, but that on the report of these Springs (however fallacious that report may have been) M. de Chevalier's argument to prove that the position of Bounarbashi, was that of Troy, has chiefly rested: and which, even repeated experiments, proving that the temperature of both is exactly alike, have not yet afforded conviction.

Had they presented any *contrast* in point of temperature, they might have *passed* for the objects *intended* in the Poem: in which case, it might have been supposed, that the Poet

African Desert, are dug to *an amazing depth*: and that "*the water, mixed with fine sand, springs up suddenly, and sometimes fatally, to the workmen. And that the people call this abyss, the Sea below Ground.*" (Travels in Barbary, page 135.) The temperature is not reported. Exactly the same kind of wells are dug in Holland; where the abyss is also called "*the Sea under the Land.*"

• Mr. Hobhouse, in his late Travels says, "*only not chill.*" Page 761.

had selected his objects, without much regard to their topographical consistency; but merely to their bearing on the action of the Poem. But as so many other particulars of the Topography, coincide with the historical part of it, one naturally expects consistency in this also: especially as the position of *Troy, the Kalli-colone, &c.* have so close a connexion with that of the Springs.\*

---

Although there seems to be little difficulty, in identifying the two Rivers that bounded the Plain of the Troad; or in fixing the *upper* parts of their courses; yet the changes that must necessarily have taken place in the *lower* and *alluvial* parts, render it difficult to fix their particular line of course, or that of the sea-shore at the head of the Bay; at any given time. However, reasoning from appearances, and from analogy, the Mender (*Scamander*; meaning the confluent river) must, in a course of ages, have varied its bed, throughout the whole space, between the two Promontories of *Sigæum* and *Rhæteum*. The *deserted* channels, remarked by Mr. Gell, and by Mr. Carlyle, are in proof of it: and the history of every river that forms any considerable alluvions, furnishes examples of a like kind.

One can only endeavour, therefore, in the first instance, to

\* Most of our readers are undoubtedly aware, that it is by no means an uncommon case, to find hot and cold Springs, very close to each other. Therefore the mere existence of such, even in the quarter of the Troad, if unaccompanied with any of the other objects, belonging to the description of the place, would not afford complete conviction. The Author has seen them in Bengal so very near together, that a frog leapt from the cold one into the other, which was *scalding hot*.

approximate the general position of the *Ancient Shore* of the Bay, at some given period of history ; as for instance, in the time of Demetrius, or of Strabo : and to deduce from thence, according to the *acknowledged measure of recedence* of the sea ; checked by reason and analogy ; the position of the same shore, and Camp of the Greeks, at the time of the Trojan War. And finally, if, in reference to such an approximated position of the shore, a *tumulus* can be found, answering to that of ILUS ; we may be enabled to adjust, in a general way, the ancient course of the lower part of the Scamander, (that is, the Scamander and Simoïs united) which had a close connexion with this *tumulus*, in the history of the transactions of the Iliad. And, as a necessary consequence, the position of the *Throsmos*, or rising ground, on which the Trojan army encamped, at the attack of the Grecian wall, may be approximated : together with the places of the fields of battle ; and of the transactions recorded in the ten consecutive Books of the Iliad, from the *eighth* to the *seventeenth*, both inclusive.

In the course of this enquiry, the Author has often found it necessary to enter into very minute details, in order to illustrate more fully the History of the Poem. Repetitions also, were found to be unavoidable, in the attempt to render each separate head of enquiry more distinct.

## SECTION II.

CONCERNING THE POSITION OF THE CAMP AND RAMPART  
OF THE GREEKS.

*The Promontories of Sigæum and Rhœteum not named by Homer, but identified by Pliny—Accretion of Soil, at the Mouth of the Scamander, over-rated; both by Demetrius, and by Modern Writers—Proved by the mode of progress to which it is necessarily confined—Idea of the Bay, and Station of the Fleet—Tumulus of the Greeks, slain in the first Battle—Tumulus of Achilles, and of Patroclus—of Ajax—Arrangement of the Ships, the Camp, and the Rampart, or Wall of Defence—Extent of the Bay, much over-rated by all the Ancients.*

THIS, and the three succeeding articles; namely, the Monument of *Ilus*; the *lower part* of the course of the *Scamander*; and the *Throsmos*; having a close connexion with each other, in respect of position; and mutually throwing light on each other; are discussed in succession: and in the order in which they are mentioned.

The Grecian Fleet was drawn up on the shore, between two promontories; which although not named, are clearly shewn to be those of *Sigæum* and *Rhœteum*. And in the intermediate space, was the mouth of the *Scamander*, or *Xanthus*. See the *Iliad*. lib. xiv. v. 36, for the Promontories."

" Cowper, v. 42.

The mouth of the river is constantly implied to be situated between them ; but not expressed in *terms*, in the *ILIAD*.

*Sigæum* is a geographical position, concerning which, there can be no doubt: since its Promontory, which separates the *Hellespont* from the *Ægean Sea*, is universally recognised in the southern Cape of the *Dardanelles*. One of the Tumuli\* on this Cape, regarded as the Monument of *ACHILLES*, was marked by the Town of *Achilleum*, adjacent to it: the other Promontory must of course be that of *Rhæteum*; whose *Tumulus* is ascribed to *AJAX*, with equal authority.

Pliny (lib. v. c. 30.) says, " There has been *ACHILLEUM*, " a town near the Tomb of *ACHILLES*, first built by the " *Mitylenéans*, and afterwards rebuilt by the *Athenians*; " where his fleet had been placed, near *Sigæum*. There has " been an *ÆANTE'UM* also; built by the *Rhodians* at the " other corner [of the Bay], where the Sepulchre of *AJAX* " is; and where the Station of his Fleet had been, 30 stadia " from *Sigæum*."

Herodotus also mentions *Achilleum*. (*Terpsichore*, c. 94.)

So that it appears to have been the received opinion of ancient times, that these were the sepulchres of those heroes. And it seems by no means too great an assumption, to fix their stations in the line of battle, in situations correspondent to the stations of their ships, and to their respective monuments.

The accumulation of alluvial matter, *here*, must have been so considerable, in the course of 30 centuries, as to defy all

\* There being two: the other is supposed, probably with reason, to be the monument of *PATROCLUS*.

attempts to determine, otherwise than in a very general way, the line of the sea coast, at the time when the Greeks encamped on it.

But Strabo (page 598) informs us, from Demetrius, that in his time (nearly two centuries before our æra) the sea-coast was 12 stadia distant from New Ilium. And Pliny (lib. v. c. 30) says a Roman mile and half; which probably arose from his erroneously converting the Grecian itinerary stades into Roman miles, at the rate of 8 to a mile, which was his usual practice: therefore the report of Demetrius is to be preferred; as he probably reckoned by Grecian stades.<sup>y</sup>

It has appeared (see above page 41), that there is little doubt, respecting the general position of *New Ilium*; which stood on the hill, or rising ground, situated about a mile to the south-east of Koum-kui.<sup>z</sup> And it is collected from Strabo (page 599) that the city extended *to the brow* of the hill, and not *beyond it*: for that appears to be the meaning of the passage:<sup>a</sup> and the ruins now found on the hill, are described

<sup>y</sup> As the Grecian and Roman stades differed in the proportion of about 6 to 7, the Roman mile and a half would be equal to about 14 Grecian stades, of 700 to a degree.

The *mean* itinerary stade of the Greeks, according to the authorities cited in "the Geography of Herodotus," page 31, is equal to the  $\frac{1}{7\frac{1}{2}}$ th part of a degree. Strabo's scale is 700 to a degree, and the Roman 600; or 8 to one of their miles. There can be little doubt but that Demetrius reckoned by Grecian stades; as the Roman could not well have been in use there, at that early period.

<sup>z</sup> See in the Map, the compartments N°. I. and II. Also Mr. Gell's Plan, N°. XLV.

<sup>a</sup> It is, when he was attempting to prove that the Ilium of his time was not the ancient Troy. He says, "Hector could not have been pursued round about 'New Ilium, because of the nature of the ground.'" One must conclude, therefore, that the ground went with a steep declivity, from the foot of the wall.

to extend *to its brow*; towards Koum-kui, and the Mender. Still the shore would probably have been deeply indented, as at present, by the deserted beds of the river, and inequalities in the *new formed* land: therefore only *a kind of mean* can be taken, for the whole line of the *then* coast; which may be supposed to have been nearly parallel to the present one. (See N°. I. and II.)

The brow of the hill which forms the site of New Ilium is at present *nearly* two British miles from the nearest alluvial shore; which is that at the entrance of In-Tepé-Azmah, or the inlet to the Tumulus of Ajax (the Port of *Æantéum*); that is, equal to 19 stades, and upwards, instead of the 12 stades, in the time of Demetrius. Taking the 12 stades at Strabo's scale of 700 to a degree, we have one British mile, and nearly a quarter, for that part of the shore, that was opposite to New Ilium, in the time of Demetrius; about 1000 years in round numbers, after the Trojan war; 2000 short of the present time. Demetrius also states (Strabo, page 598) that half of the beforementioned space; that is, 6 stadia of the 12; had been added, by accretion, since the Trojan war. But this appears excessive, and therefore improbable, when the subject is examined closely; and therefore ought not to be received, without great allowance for exaggeration: as being, probably, no more than the vague report of the place. But the report of the distance of the shore from New Ilium, in the time of Demetrius, rests on a different foundation; and is consequently important and interesting. Admitting, therefore, that the coast has gained nearly  $\frac{3}{4}$  of a mile (or full 7 stadia of Strabo's scale) in 2000 years, it ought, at the same rate, to have gained no more

than  $3\frac{1}{2}$  stades, instead of the 6, reported ; if under similar circumstances. And according to this rough kind of estimate, the shore, in the time of the Trojan war, should have been  $8\frac{1}{2}$  stades from the site of New Ilium : or somewhat more than  $\frac{4}{5}$  of an English mile.

We are apt to reckon too fast, in the calculation of the increase of alluvial shores ; and sometimes do not reflect, that although the surface of a country, and the river banks, may be composed of alluvial matter, yet that it may be nothing more than *strata* of such matter, laid upon the original soil ; as the country rises by the repeated depositions of floods. For the operations of *forming new* land, and of *raising the old*, necessarily go on together.

There is, moreover, given by Demetrius, a measure of 20 stadia, between New Ilium and the *Naustathmus*, where the Scamander is said to have *then* discharged itself. (Strabo, page 598). On the application of this distance, to the Map, it will be found, that whatsoever may have happened elsewhere, the coast cannot have gained  $\frac{3}{4}$  of a mile, in *that part* ; although for want of good *landmarks*, the ancient measures cannot be applied, *accurately*. In the sequel, we trust that it will be made to appear probable, that the *Tumulus* at the Bridge of Koum-kala, stood near, or adjacent to, the Grecian wall : which, if admitted, the accretion must have been much less *there*, than between New Ilium and the sea ; according to the report of Demetrius : and, in fact, it can scarcely be doubted, that the accretion has been much greater towards *Rhæteum*, than *Sigæum* ; for reasons that will presently appear.

If the measure of accretion arising from the depositions

of many other rivers, in various parts of the world, was to be applied to the Mender, it would only be calculated to mislead. For the Mender, in respect of its *whole* bed, is only an *occasional* river, or torrent: and therefore, is not *constantly* bringing down the matter of alluvion, like the Ganges, Mæander, and other such rivers. Here is a space of a mile and half, in *breadth*, along the coast of the Bay, to be filled up, by a stream, whose *bed*, indeed, is 300 feet in breadth, but whose *stream* is very commonly so low, as to be crossed *dry shod*.<sup>b</sup> Were it constantly filled, its operation would be greatly accelerated; but still could only proceed in the same *mode* as at present; which is, by adding *narrow tongues* or *slips* of alluvion, on each side of its bed; which it pushes forward into the sea: <sup>c</sup> And if the mass of alluvion, created, was equal to the breadth of the whole river bed (300 feet) it would require 26 such *slips*, or *tongues* breadth-wise, to fill up the space. So that, in order to form *one* foot of new land in the sea, along the whole breadth of the Bay, the River Mender must advance a quantity of alluvion, equal to 26 feet, on a single slip. And had 6 stades, equal to more than 3000 feet, been added in 1000 years, a border of more than 3 feet annually, must have been added, across the whole extent of a mile and half: which is equal to the formation of *a piece of land* in the sea, 300 feet by 80, in each year; which is not to be credited; since the bed of the river is only occasionally filled. It is a proportion beyond

<sup>b</sup> This is the expression made use of, by Doctor Chandler, in particular. One must conclude that they passed over upon stepping-stones. (Travels, p. 41.)

<sup>c</sup> See the progress of alluvion, in the geographical system of Herodotus; chapter xviii.

what the Ganges, with all its floods, and matter of alluvion ; and with an *unceasing* stream, accomplishes.

---

HOMER gives an idea of an open, winding shore, or bay, only ; *not a port* : it is to the description of others, that we are indebted, for the notice of a Port of the Achæans ; which may, or may not, have existed during the time of the Trojan war.<sup>d</sup> Possibly, the same openings, now in existence, may have existed in the same lines, from remote antiquity, though removed lower down, as the coast was prolonged : for they were probably *deserted beds* of the *Scamander*, which had wandered from one part of the bay, to another.

It only appears necessary, for the present purpose, to suppose a *general outline* of shore, or beach, of a curvilinear form, extending between the high lands of the Capes of *Sigæum* and *Rhæteum* ; and at  $8\frac{1}{2}$ <sup>e</sup> stades from the *brow* of the hill of New Ilium ; or somewhat more than  $\frac{4}{5}$  of an English mile. This line, of course, will mark the supposed range of the Grecian fleet, which was drawn up on the shore, in several lines, *across* the head of the Bay. A reference to the Plan N<sup>o</sup>. II. will shew, that the sea, at that time, must

<sup>d</sup> Strabo, pages 595 and 598 : and Pliny, lib. v. c. 30.

Some have applied the term *Achæan Port* to the *whole Bay*, at the head of which the fleet was drawn up. But the same authority which places this Port at 12 stadia from *New Ilium*, gives the *Naustathmus* at 20 : so that there were two distinct Ports in the Bay : and the *Bay itself*, of course, was out of the question, as a *Port*.

<sup>e</sup> That is,  $3\frac{1}{2}$  being taken from 12, the distance of the shore from New Ilium, in the time of Demetrius.

have washed the whole western face of the hill, which forms the broad Promontory of *Rhæteum*: and, of course, must have *approached*, or even *entered*, the mouth of the Valley of *Thymbra*: (now Thymbrek, or Dumbrek.) And from this point, we must conceive the shore of the Bay, to have extended to the W. N. W. (or nearly parallel to the present coast,) *towards* the Promontory of *Sigæum*, and the *Tumulus* of Achilles; terminating at the edge of the *high* ground, which forms the *present* western bank of the Mender. Such a line would, of course, have fallen very far *within* the *present* shore; which can hardly be said to form a bay.

On the above supposition, it is not unreasonable to regard with Mr. Gell, (*Troy*, page 45) the *Tumulus* near the bridge of Koum-kala, as the one described by Homer, as the universal tomb of the Greeks, slain in the *first* battle before *Troy*; and whose bodies were collected and removed thither for that purpose.<sup>f</sup> To countenance this supposition, we have the *Tumuli* of Achilles and Patroclus, exactly in a line with the other; and in the very neighbourhood of their stations, in the line of battle: but advanced towards the termination of the Promontory, for the sake of placing them in a more conspicuous situation; <sup>g</sup> as we see that of Ajax, in a corresponding situation, adapted to *his* station in the same line.

It has been remarked, that the greatest accumulation of

<sup>f</sup> *Iliad*, lib. vii. v. 430: Cowper, v. 452.

<sup>g</sup> *Odyssey*, lib. xxiv. v. 80. *et seq.*

“ On a tall Promontory, shooting far  
 “ Into the spacious Hellespont, that all  
 “ Who live, and who shall yet be born, may view,  
 “ Thy record, even from the distant wave.” (Cowper, v. 94, *et seq.*)

alluvion, has been in the quarter of *Rhæteum*. This may be accounted for, in the first place, by the longer continuance of the course of the Mender there. But another, and principal cause, may have been, the operation of filling up the Bay, by the new formed land ; which brought the river current, into more immediate contact with the current of the *Hellespont* : so that a great part of the matter of alluvion, was diverted from its former place of deposit, and hurried away into the *Ægean* Sea. The advance of the mouth of the river, towards *Sigæum*, would have a like tendency ; by removing the cause of alluvion farther from the side of *Rhæteum*.

Connected with the above *Tumulus* of the Greeks, was the *right flank*<sup>a</sup> of the wall or rampart : for in lib. vii. v. 337, it is said,

————— “ to the tomb *adjoined*

“ We will construct high tow’rs for the defence

“ Of us, and of our fleet.” (Cowper, v. 349.)

To a reader who has been accustomed to regard the quantity of accretion as in a manner *indefinite*, this *Tumulus* may appear to be too low down, towards the sea. There is, however, *no other* in this quarter, save the one near the former conflux of the Mender and Bounarbashi Rivers : and which is much *too far removed* from the shore of the *Hellespont* ; as we also conceive that of Koum-kui to be. It is impossible, at this day, to guess what circumstances may

<sup>a</sup> That is, the *right*, as it respected the Greeks within the wall. Had it stood on the *left*, it would probably have been mentioned, during the attack on the *left*, by Hector.

have determined the choice of position, for this commanding work; which was at once to serve as a tomb, and place of arms: but it may possibly have been, to command the water-course, when the Bounarbashi River may be supposed to have flowed singly through the bed, since occupied by the joint waters of that river and the Mender: and being itself a mere rivulet, and not subject to great swellings, was harmless, in a military view: and at the same time would prove very convenient to that part of the camp; as the Mender to the opposite quarter of it.

On this Beach, then, of which we have attempted to approximate the position, the Grecian fleet was drawn up, in lines, or rows, (probably 4 or 5) parallel to the head of the Bay, and with their sterns towards the land:<sup>i</sup> the rampart rising, at a convenient distance, beyond the innermost row. (Iliad, lib. xiv. v. 30:)

“ For, distant from the dang’rous field, the Greeks  
Had rang’d their barks beside the hoary deep;  
The foremost next the Plain, and at the sterns  
Of that exterior line had built the wall.”

(Cowper, v. 34.)

<sup>i</sup> This circumstance alone, seems to prove how very different the form of the ancient ships, was from the present ones. Modern ships swim much deeper by the stern than by the head; and are therefore always placed with their sterns to seaward. (See also lib. xiii. v. 762.)

The same mode of placing the stern, appears in Herodotus, Clio, c. 1. “These females, standing near the stern of the vessel,”—that is, on the shore: because after they were seized, they were “*carried on board.*” The Phœnician merchandize had been exposed for sale: the place would doubtless have been somewhat removed from the margin of the sea; and therefore the stern must have been towards the land, and the market, a little within it.

Streets of tents were placed *between* the rows of ships :<sup>k</sup> and it may be supposed, as a matter of course, that a large body of troops was encamped between the ships and the rampart.

It appears by Mr. Gell's Plan (N°. XLV) that the space between the high lands of *Sigæum* and *Rhæteum*, across the head of the Bay, is *now* about a mile and half, or rather more : and in M. Kauffer's Plan, about the same : and was probably much the same anciently, although over-rated by Pliny and Strabo.<sup>l</sup>

Of this space, it may be supposed that a mile and quarter, or more, was applicable to the purpose of placing the ships, and of covering them with a rampart. The Greeks would not, certainly, have taken within their camp, the course of the *great torrent*, *Scamander*, so as to hazard a separation of their force, by its sudden swelling : an event that happened suddenly and unexpectedly, during Achilles's pursuit of the Trojans, after the last battle.

Had the Beach even admitted of placing the whole fleet in one line,<sup>m</sup> this would have been incompatible with its defence ; since such a line, containing nearly 1200 vessels,

<sup>k</sup> Iliad, lib. xv. v. 656 : Cowper, v. 770.

<sup>l</sup> Strabo (p. 595,) says that the distance across from one Promontory to the other, is 60 stades : Pliny, (lib. v. c. 33) 30 stades. But no more than 2 British miles, or about 20 stades, arise, on the plans of Messrs. Kauffer and Gell, between the *Tumulus* of Ajax, and that of Patroclus : nor more than 2½ miles, or about 25 stades, between the *Tumulus* of Ajax, and the Town of Jenishehr (*Sigæum*). So that even the lowest of the ancient statements (Pliny's) is either in excess, or corrupted ; although M. de C. praises his accuracy in this place.

<sup>m</sup> — “ Spacious though it were, *the shore alone*

“ *That fleet sufficed not*, incommoding much

“ The people ; wherefore they had rang'd the ships

could not have been less than 4 or 5 miles in length: but a mile and quarter, or more, of rampart, might be commodiously defended, by such a force as the Greeks possessed; or might have had on the spot.\*

The ships must have been drawn close to each other, side by side, in order to allow of Ajax's *striding* from one ship to another, during the attack, within the lines. And what was equally necessary, they were *propped* either with stones, or shores, to keep them upright.° This being the case, there must of necessity have been large intervals left at proper distances, for a regular and unobstructed communication, at all times, between the streets of the camp: and especially in the event of an attack; as really happened. It may of course be supposed, that the whole of the mariners, and as

“ *Line above line ascending, and the bay*

“ *Between both Promontories, all was filled.*”

Lib. xiv. v. 34. Cowper. v. 38.

\* The Catalogue of Homer (lib. ii.) contains 1183 to 1186 ships. Thucydides reckons them roundly at 1200 (lib. i.): so that it may be concluded, that the general number has been handed down pretty accurately.

The words of this great historian, respecting the subject of the armament, are worthy of remark.

“ Let it not be supposed, because of the smallness of the City of *Mycenæ*, (Agamemnon's capital) that the fleet was less numerous than the Poets have represented; and as Fame has reported it to have been—but rather suppose that the expedition was even greater than any of the preceding ones; although inferior to those of the present age.”—(that of the *Peloponnesian* war.)

He then proceeds to state, that as Homer has given the scale of the largest and of the smallest vessels; that is, of 120 men, and of 50, each; the mean [at 85, giving 102,000 men] does not constitute such a force, considered as a joint effort of *all Greece*, as could be reckoned great. (Thucydides, lib. i. Smith's Trans.)

\* Iliad, lib. i. v. 487; and also xiv. v. 410. Cowper, 490, and 485, respectively.

many of the troops, besides, as could conveniently be accommodated, were lodged *in* the ships.

Such a disposition, together with the rampart and ditch, and the projecting towers beyond them; with an allowance for the spray of a small wave, clear of the outermost range of ships; cannot well be taken at a depth of less than 900 feet, from the Beach, to the outer edge of the ditch of the rampart. However, it may well be supposed that no part of the Grecian Camp, lay to the east of the Scamander: but rather that they would make use of it, to cover the *left* flank of their position. We now proceed to enquire into the position of the TUMULUS of ILUS; and of the line of course, and circumstances, of the LOWER PART OF THE SCAMANDER; as essentially bearing on it, and on the general subject.

## SECTION III.

## CONCERNING THE TUMULUS, OR MONUMENT OF ILUS.

*The Mound at Koum-kui, discovered by Mr. Gell, taken for the Tumulus of Ilus—has a close Connexion with the Throsmos and Rampart—Trees said to grow on the Tumulus of Ilus by Theophrastus and Pliny.*

It happens, that in the just mentioned position of the Grecian Camp, the Mound, or *Tumulus*, near the Village of Koum-kui, first noticed by Mr. Gell, would have been about four stadia, or somewhat more than  $\frac{3}{8}$  of a British mile distant from, and nearly fronting, the left of the same camp, and its rampart or wall.

It is in proof that the Monument of Ilus stood in the quarter opposite to the station of Ajax; which is known to have been on the *left*, or in the eastern part of the camp, where Hector made his attack: <sup>p</sup> whereas, the Tumulus at the ancient conflux of the Mender and Bounarbashi Rivers, which has been taken for it, would have been on the *right* of the same camp, which was the station of Achilles; and which was not attacked. Neither would the distance suit; as it could not well have been within a mile and quarter of the nearest part of the Grecian camp.

<sup>p</sup> The proof of this particular will be found in the succeeding section (N<sup>o</sup>. IV.) on the lower part of the course of the Scamander; with which it is more intimately connected.

If, then, we have conceived the matter justly, the *Tumulus* near Koum-kui, would agree to that of ILUS, in respect of the assumed position of the Grecian camp and wall.

Homer describes the Tomb of ILUS, as lying in the ordinary road from the Grecian camp to Troy, (lib. xi. v. 166; and xxiv. v. 349: Cowper, v. 202, and 438.) In the former place, the Trojans are described to have fled from their position on the *Throsmos*, which was near this tomb, "*through the middle of the Plain*, to reach the City" of Troy: and in the latter, Priam passed it, in his way between Troy and the tent of Achilles. Indeed, whether Troy be placed in the Plain, eastward of the Mender, or at Bounarbashi, this Tumulus lies equally in the way between the site of the camp, and the city. (See the Map, N<sup>o</sup>. II.: and Mr. Gell's Plan, No. XLV.)

The Tumulus at Koum-kui has the remains of columns on it: (Gell. p. 116.) but these evidently belonged to a structure of much later date, than that of the Trojan war. That of Ilus had a single column, or *stela* on it: for Paris is said to have sheltered himself behind a column during the battle, in lib. xi. v. 370, 505.<sup>a</sup> It is the only one in the Plain, that is represented to have had a column on it: others, however, might have been finished in the same manner; but there was no necessity for mentioning it.

Of this monument, Mr. Gell speaks as follows: page 116.

It is "a mound of considerable magnitude.—There is every reason to suppose it artificial; for it is perfectly insulated, and stands on a dead flat, near the *dry channel*."

<sup>a</sup> "Behind a stately pillar of the tomb  
Of ancient Ilus." (Cowper, v. 452.)

“ The heap is *not lofty* ; and appears to have been levelled,  
“ for the purpose of placing on its summit, some kind of  
“ edifice, of which 2 or 3 marble columns are the remains.—  
“ It seems too extensive to have been designed for a  
“ Tumulus.”

Mr. Gell says, that it is *not lofty*. But whatsoever may have been its original height, it ought to appear lower now ; not only from the levelling of its summit, but from the alluvions, which must have raised the general level of the Plain, at its base. (See above, page 73.)

The Tumulus of Ilus in the Iliad, has a close connexion, topographically, with the Camp of the Greeks ; and also with the *Throsmos*, or rising ground, on which the Trojans formed their camp, during their warfare, near the rampart ; and no less with the *lower course* of the *Scamander*. For whilst the army of Troy occupied with its *right*, a part of the Valley of *Thymbra*, *Hector* held a council at the Sepulchre of Ilus ; at no greater distance from his own camp, than what served to remove him from its noise and tumult ; whilst, at the same time, the military musick, and *hum* of the same camp, was *heard in that of the Greeks*. One may conclude, that the space of 4 stadia mentioned above, equal to  $\frac{3}{8}$  of a British mile, or somewhat more ; as the interval, between the supposed place of the rampart of the Greeks, and the Tumulus of Koum-kui ; may be allowed to agree with the circumstances of the history.

The reader, of course, will not apply to ancient warfare the rules followed in the modern. The missile weapons of the ancients, commanded a narrow space, compared with those of the moderns : and therefore there is nothing

contradictory to reason and probability, in the fact of the Trojan army having taken their ground within hearing of the Greeks.

Whether the Tumulus lay in the *front*, or in the *rear* of the Trojan camp, is not known: but probably the latter. It is, however, of no great importance to the question, when it is recollected that Hector might have avoided the noise or tumult of the camp (the alleged object) by merely ascending the mound.

It must be acknowledged that, had the Monument of Ilus been entirely unconnected with the transactions at the fleet and rampart, one would naturally have expected it to have been situated much higher up, towards Troy. But the history is too pointed and precise, to admit of such a supposition; that is, admitting that the Poet confined himself to facts, in his geography. But even admitting the contrary, what was the use of carrying Hector a mile or two from his camp, at so critical a time, in order to introduce a mere classical image, at the expense of probability and propriety.<sup>r</sup>

---

\* \* Since the above was written, Doctor Clarke's second volume has announced two Tumuli, in the Plain between Kalifatli and New Ilium, which appear to have been unnoticed to this time. (See N<sup>o</sup>. I. and II.)

One of these, appears to stand at the opening of the Valley of the Shimar River: the other in the midst of the Plain,

<sup>r</sup> The warfare near the Grecian wall proves, by a number of instances, in which Paris is described to wound the Grecian chiefs with arrows, shot from the Tomb of Ilus, that Homer spoke of a position near that wall. See *Iliad*, lib. xi. v. 370, and 582: Cowper, v. 452, and 699.

between Koum-kui and Kalifatli; and to the north of the latter. From this Tumulus, the Doctor had a view of the coast, towards the mouth of the Mender: and it had two *oak trees* growing on it.

It was remarked by Theophrastus and Pliny, that trees grew on the Sepulchre of Illus, near New Ilium. Pliny (lib. xvi. c. 44), calls them *oaks*; and says, it was reported, that they were coeval with the Tumulus. Dr. Chandler, (Hist. Troy, p. 76, 77,) quotes Theophrastus, who speaks of *beeches* growing there.

It is possible that the *Tumulus* so described by Dr. Clarke, may be the one intended by those authors, for the Sepulchre of Illus. But had it been the one recorded by Homer, where Hector held a council on the left of the Grecian camp, and almost within hearing distance from it, the sea, at that time, must have washed the western front of the hill of *New Ilium*; and consequently, the *place* of the Vale of *Thymbra*, would have been a bay of the sea.

But the Vale of *Thymbra*, at that moment, contained the Trojan auxiliaries, the *Thracians*, *Lycians*, and *Carians*; who, collectively, formed the right wing, and reached to the sea. (See N°. II). This is proved by the speech of Dolon; and the night adventure of Ulysses and Diomed. (lib. x. v. 271, Cowper, v. 316.) If, then, this be the Tumulus in question, we must suppose Hector to have gone a mile and half from his post, to attend a council of war, whilst the enemy, in full force, was within hearing of his army. Yet the history says no more, than that Hector, with all his chief officers, retired to the Tomb of Illus, in order to avoid the noise of his own camp. (lib. x. v. 415: Cowper, v. 474.)

## SECTION IV.

CONCERNING THE LOWER PART OF THE COURSE OF THE  
SCAMANDER.

*The Scamander must have entered the Sea, near Rhœteum, at the date of the Trojan War.—The LEFT, the side on which Hector fought, explained to mean the left of the Grecian Camp.—Port of the Achæans, the same with that of Æan-téum; but distinct from the Naustathmus—Palæ Scamander of Pliny—Attempt to reconcile the Statements of Strabo and Pliny, respecting the position of the Mouth of the Scamander—Karanlik, or the closed Port—Thymbrius River.*

THE lower part of the course of the *Scamander* (that is, the *Scamander* and *Simoïs* united) next claims attention. This river ought, according to the history, to have ran by the *left*, that is, on the *east*, of the Grecian wall; the attack on the station of Ajax, near *Rhœteum*, being “on the LEFT; and also *beside the Scamander*.” Hector also, as we have seen, held a council at the Monument of Ilus; and that council was said to have been “*at the Scamander*.” Now, the *left* intended, could not have been the left of Hector’s army; but, on the contrary, that of the Grecian camp and wall; when looking from thence, towards the field. For as Achilles and Ajax were posted at the opposite extremities of the Grecian line; and it being admitted on all hands, that

Achilles was placed on the side towards *Sigæum*, it must follow of course, that Ajax was on the side of *Rhæteum*; which was on the left, in respect of the *Grecian* army, and not of the *Trojan*.<sup>s</sup>

But as the Author is aware that the *left*, as applied to Hector, in this case, has been almost universally understood in these times, to mean the left of the Trojan army; and as such, has been quoted in support of systems of the Topography; it will be proper to adduce proofs of the contrary: in order to which, it will be necessary to enter largely into detail.

It has appeared, that the Tomb of *ILUS*, was close, or very near to, the ford, or ordinary *pass* over the *Scamander*, in the way between Troy and the Grecian camp. (See above, page 59, note). Priam came to *a river*, after passing the Tomb of *Ilus*, on his way to the Grecian camp: and on his return, is actually said to have forded the *Xanthus* (*Scamander*); doubtless, the same river to which *he came*, as well as *passed*), in his way out.<sup>t</sup>

Again, Hector, as we have seen, held a council, at the side of the *Scamander*; <sup>u</sup> which council is afterwards<sup>x</sup> said to have been at the Tomb of *Ilus*. Consequently, the Tomb of *Ilus* was not only at the *side* of the *Scamander*, but near its *ford*, also.

It is also said, that Hector fought beside the *Scamander*;

<sup>s</sup> The reader is again referred to the Map, N<sup>o</sup>. II.

<sup>t</sup> *Iliad*, lib. xxiv. v. 349, and 693. Cowper, v. 439, and 867.

<sup>u</sup> Lib. viii. v. 490: Cowper, v. 563.

<sup>x</sup> Lib. x. v. 415: Cowper, v. 473.

and ON THE LEFT OF ALL THE WAR.<sup>y</sup> It would have been perhaps, too much in the style of a gazette, to speak alternately, of the right and left of the different armies: therefore the Poet appears to give, as a permanent mode of distinction, and one that could not well be mistaken, afterwards, the LEFT of the Grecian wall and camp: at once, a fixed point; and the principal scene of warfare.

Moreover, it is very clearly shewn, that Achilles had his station on the RIGHT of the Grecian line, towards *Sigæum*; and Ajax on the LEFT, towards *Rhæteum*; and Agamemnon appears to have been in the CENTRE:<sup>z</sup> and as it was the

<sup>y</sup> Lib. xi. v. 497: Cowper, v. 603.

Here it becomes necessary to remark, that some contradiction would seem to arise, unless the reader is reminded, that when this is first said of Hector, he was pursuing the Greeks along the *left*, or western bank of the *Scamander*, towards their rampart, after their defeat, in the *second* battle: and *before* the attack on the rampart: otherwise, when it is said that "Hector, fighting on the *left*, had "no knowledge of the valorous acts then performing by Ajax," it might have been supposed, that Hector was at that time, *opposite to the post of Ajax within the rampart*, and yet was ignorant of what was passing there. But this warfare was whilst Ajax was *in the field*; and *before* the attack of the wall.

However, a serious difficulty occurs in lib. xiii. v. 675; Cowper, v. 804; where, *within* the rampart, Hector is said not to have known yet, that, "on the *left* of the ships, his Trojans were suffering so much: for he still kept the "position, where he first penetrated the camp, in the quarter where the ships "of Ajax and Protesilaus were."

M. Heyne, it appears, felt the same difficulty. Hector, however, might have been on the left, in a *general* sense, though not on the *flank*, or *extremity*.

<sup>z</sup> Iliad, lib. viii. v. 222: Cowper, v. 256. Also lib. xi. at the beginning.

The stations of Ajax and Achilles are positively spoken of: but it is only said of Agamemnon, that he ascended the ship of Ulysses, which was placed in the centre. It may however be inferred that he was then near his own station.

station of the Ajaces that was attacked by Hector, there is no mistaking it.<sup>a</sup>

In effect, then, throughout the whole attack of the rampart, in Books xii. to xvi. both inclusive, the LEFT of the GREEKS is constantly intended. And probability goes with this supposition: Achilles was sullenly neutral, and the Trojans must have wished to keep him so; and therefore would naturally avoid his station; which the ancients universally have fixed at *Sigæum*; as that of Ajax, at *Rhæteum*. It may be added, that Homer was evidently partial to the cause of the Greeks (a disposition, of which his Readers naturally partake); and that his mind, on this occasion, may be said to have resided in the camp of the Greeks.

The night adventure of Ulysses and Diomed, with Dolon the Spy, also seems to shew that Hector was on the side of *Rhæteum*.

Each party set out from his own head quarters, to proceed towards that of his enemy.<sup>b</sup> Consequently both proceeded on *the same line*, from opposite points: and Dolon was intercepted, at no great distance from the head quarters of the Greeks.<sup>c</sup> Thus far, the description suits *either extremity* of the Trojan line. But the information collected from Dolon, determined them to seek the Thracian auxiliaries,<sup>d</sup> who were said to be encamped in the quarter of *Thymbra*. There Ulysses and Diomed arrived, after passing through "*the bloody field strewed with arms*:"<sup>e</sup> which, of course, marks the

<sup>a</sup> Iliad, lib. xi. v. 497. Cowper, v. 603. And lib. xiii. v. 190: Cowper, v. 227.

<sup>b</sup> Iliad, lib. x. v. 298, 326, and 415: Cowper, v. 343, 375, and 473.

<sup>c</sup> v. 350, and 561: Cowper, v. 404, 646. <sup>d</sup> v. 435: Cowper, 497.

<sup>e</sup> v. 470: Cowper, 540.

scene of the recent attacks made by Hector, to have been on the side towards *Thymbra*: or, in other words, towards *Rhæteum*.

Again, if it be admitted that the Grecian chiefs returned from the quarter of *Thymbra*, to the place from whence they first set out, *by the direct road*, (and nothing can be understood to the contrary), it would prove that Dolon came from the same quarter; since they took up his *spoils* by the way: they having been left in a marked spot.<sup>f</sup>

If the Reader admits the above application of the term LEFT, it could not have been otherwise, than that the *Scamander*, at that day, discharged itself into the sea, in the quarter of *Rhæteum*. — And moreover, it had not varied its course considerably to the time of Demetrius: for the place of conflux of the two rivers, being then near *New Ilium*,<sup>g</sup> the confluent river must necessarily have ran in the line TOWARDS *Rhæteum*. (See the Map, N<sup>o</sup>. I. and N<sup>o</sup>. II.

To this may be added, that the events of the war, prove that the *Scamander* flowed *between* the Grecian camp and Troy; as when Achilles drove the fugitive Trojans into it, in their retreat towards Troy:<sup>h</sup> and when Priam crossed it, not far from the Monument of Ilus, in his way to, and from the Grecian camp.<sup>i</sup> It is therefore impossible that the Bounarbashi River could be the *Scamander* of Homer, let Troy be where it might: because the course of it does not intervene between Troy and the Grecian camp. And this seems to prove an oversight in M. de Chevalier.

<sup>f</sup> Iliad, lib. x. v. 465, and 532; Cowper, v. 535, 607.

<sup>g</sup> See above, pages 28 and 42.

<sup>h</sup> Iliad, lib. xxi. at the beginning.

<sup>i</sup> Lib. xxiv. v. 349, and 693: Cowper, v. 439, and 367.

The Port of the *Achæans* (i. e. of the Grecians) was 12 stadia from New Ilium, in the time of Demetrius. (Strabo, pages 595, and 598.) From the form, and also from the relative position of the coast of the Hellespont, to that place; the Port itself being also at the nearest point of the coast, to New Ilium, at that period; it follows, that the Port of the Achæans must have been situated very far over towards *Rhæteum*. (See the Map, N°. I: and II.)

Strabo (on the authority of Demetrius we apprehend) distinguishes from the Port of the *Achæans*, the place of the *Naustathmus*; by placing the former at 12, the latter at 20, stadia, from New Ilium: (p. 598): although they have perhaps, been often confounded together. It becomes necessary to distinguish them, in order to a right understanding of the position of the mouth of the *Scamander*, at different periods. He observes (p. 598), that this river discharges itself, near the *Naustathmus*, at 20 stadia from *New Ilium*, and TOWARDS, OR NEAR, *Sigæum*. Also that the two rivers *Scamander* and *Simoïs*, having joined their streams in the Plain, near New Ilium, form various lakes and marshes; and in particular, one named *Stoma-limne*; which communicated with the sea, by a *blind* mouth: that is, a channel nearly choked up with mud and sand. (Pages 595 and 597).<sup>k</sup> In 597, he says, that the *Scamander* enters the sea AT *Sigæum*: meaning, of course, at the eastern flank of its

<sup>k</sup> Hence, it may be concluded that the *Stoma-limne* was distinct from the *Naustathmus*, although near to it.

The Author has not attempted to describe the *Stoma-limne*, and other lakes and channels on the Map; as it would have produced confusion, instead of information.

promontory ; which is, however, 28 stadia distant from New Ilium, on the Map. The 20 stades fall about midway between the high land of *Sigæum* and that of *Rhæteum* ; which therefore ought to be the position of the *Naustathmus*, according to the distance given by Strabo himself. And as he has said in page 598, that the discharge was only *towards* or *near Sigæum* : thus qualifying the other assertion ; it may perhaps be concluded that he meant to say, that the mouth of the Scamander was more towards *Sigæum* than *Rhæteum*.

Pliny says (in his own time, we are left to suppose), that the joint waters of the *Xanthus* and *Simoïs*, flowed into the *Port of the Achæans* ; first forming a lake or stagnant pool, named *Palæ* (or the OLD) SCAMANDER. And that, *beyond* this Port or Inlet of the Achæans, was the *shore of Rhæteum*. He adds that “ at a Roman mile and half from New Ilium, “ was the Town and Port of *Scamandria* :” thence implied to be situated at, or near the mouth of the *Palæ Scamander*.<sup>1</sup> (lib. v. c. 30.)

<sup>1</sup> In describing the sea coast of the Troad, after mentioning *Alexandria Troas*, Pliny comes to “ the town of *Nee* ;” then to the “ *Scamander*, a navigable River ;” thence to *Sigæum*, a Town and Promontory ;” and finally to “ the *Achæan* Port, into which flowed the collective waters of the *Xanthus* and *Simoïs*.”

The Town of *Nea-Chore*, nearly contiguous to *Jenikui*, is still found on the coast of the *Ægean* Sea ; between the *present* mouth of the Bounarbashi River and *Sigæum*. The former of the names, is doubtless the Greek, the latter the Turkish designation ; (for most of the places in this quarter retain their ancient Greek names) : and the meaning of both is the same : that is, *New Town*.

If this place be the *Nee* of Pliny (as we conceive it is), and the other places are to be taken, geographically, in the order in which he mentions them, then his *Navigable River* would not be the *present* Bounarbashi, as this opens to

Thus we have abundant proof, either from Strabo, or Pliny, or both, that the *Achæan* Port was 12 stadia, or about a Roman mile and half from *New Ilium*; that it was also the nearest point of the shore to that place, in or about their times; and that it lay towards, or near *Rhæteum*. This port, therefore, answers to that of the *Æantéum*; situated at the side of the *Rhætean* Promontory, and near the Tumulus of Ajax: and which is at present named *In-Tepé-Azmah*; or the Port of the *single* Tumulus.<sup>m</sup> Not that the present Port, is that which existed at the date of Demetrius's or of Pliny's writing; and much less, that of the time of the invaders, from whom it was named; since the ground itself that surrounds it, must have been formed posterior to either: but the inlet may have been kept open, in the same line of direction, by the *back water* that continued to flow through it. And it appears incontestible, that the waters have flowed longer on this side, than on the other, by the greater increase of the alluvion, at the borders; and the greater depth of the channel; for this Port of the *Æantéum*, or of the *Achæans*, continued to the time of Constantine, to receive fleets. (Chandler's Hist. Troy, p. 152.)

It is in the neighbourhood of the *Achæan* Port, that the sea, southward of *Nea-chore*; and not between it and *Sigæum*. But to the Author it appears the most probable, that the names *Scamander* and *Sigæum*, are transposed in Pliny.

<sup>m</sup> It appears that the Turks distinguish the Tumulus ascribed to Ajax, by the name of *In Tepe*; i. e. the *single*, or *one Mount*: and those of Achilles and Patroclus, by *Duo* or *Dio*; the *two Mounts*. Of course, the Turks, on their first establishment in Asia Minor, received these names from the Greeks. M. de Chevalier has made the latter name, *Dios*; and applied it to the Tumulus of Achilles, *alone*. (Francklin).

site of *Scamandria* is to be looked for : that is, at the mouth of the OLD *Scamander*, which *had flowed*, but which had long *ceased to flow*, into the *Achæan Port*, as a regular stream. Nor can it well be doubted, that *Scamandria* derived its name from the river which ran by it. It is mentioned only by Pliny (it would appear) : and it is probable that its Port became the Port of *New Ilium*.

Thus the position of the *Achæan Port*, appears clear and satisfactory : as also that the *Scamander* and its adjuncts, once fell into it.

Although the place of discharge of the *Scamander* is given differently by Demetrius and Pliny, yet on examination, perhaps the accounts may not be found, on the whole, irreconcilable. The *Scamander* spoken of by the former, was doubtless that of *his own time* ; but the *PALÆ Scamander* of the latter, by the name, may have been that of remote times. It is also proper to observe, that the *Achæan Port*, and the *Naustathmus*, could not, from the nature of the place, be more than a mile distant from each other ; and perhaps less : and it will appear, from what has been quoted above, that the waters connected with them formed extensive lakes ; particularly that, which communicated with the *Naustathmus* (Strabo, page 595.) Is it then too much to suppose, that *two sets* of lakes, so near each other, should communicate by lateral channels ; and the rivers themselves, by the medium of these ; especially as they owed their formation to the same river, at different periods ? This may serve to explain the meaning of Pliny, without violence to that of Strabo ; or rather of Demetrius.<sup>a</sup>

<sup>a</sup> With respect to the *Scamander amnis navigabilis* of Pliny, (See note to

On the whole, then, we trust that it will appear as clear to the Reader, as it does to the Author, that the *Scamander* formerly ran by *Rhæteum*; where the memory of the fact appears to have been preserved in the very name of the river.<sup>o</sup> Also that the mouth of the river has varied in its course, between the two Promontories: that it had gone somewhat more than half way over, towards the *Sigæan* side, in the time of Demetrius: and is at present, *at* that side.

The *Karanlik Inlet*, the *head* of which appears to answer to the position of the *Naustathmus* of Strabo, is now in the state in which he describes the mouth of the *Stoma-limne* to have been; that is, shut up by a bank of mud and sand.\* But here, as well as at the site of the *Achæan Port*, the ground has all grown up, since the time of Strabo: although an *opening* may have continued in the same direction at the latter place, from the discharge of land-floods: and indeed the *In-Tepe-Azmah* seems to be the *opening* of the *Old Scamander*; as the *Karanlik*, of a *more recent one*.

The *Thymbrius* River, according to Strabo, (p. 598), was intercepted in its way to the Sea by the *Scamander*: as it was also, perhaps, at the date of the *Achæan* invasion: but

page 93), it appears on every account irreconcilable, that a *navigable Scamander* should have flowed into the *Ægean* Sea, whilst at the same time the confluent waters of the *Xanthus* and *Simoïs*, (that is the *Scamander* and *Simoïs*) are described by the same author, to flow into the bay between *Sigæum* and *Rhæteum*!

<sup>o</sup> Nothing is more common in tropical climates, where rivers often change their courses, than to have *duplicates* of the same name: that is, of the *existing* river; and of the *old*, or former river; in many instances of which, the *bed*, with *stagnant pools* only, remains, except at its *embouchure*.

\* *Karanlik* is said to mean, in the Turkish language, the *closed port*.

that of Bounarbashi might at the same time have gained the sea, on the side of *Sigæum*, by a separate channel from the Mender. If the Shimar (*Simoïs*) had, at that time, distinct summer and winter courses, as at present, they might have ran much in the same lines of direction also; and its conflux with the Mender, in the time of Demetrius, might have been effected by the means of a slight variation of its *present* summer course, along the front of New Ilium; the Mender (*Scamander*) falling into it, at a point between Kalifatli and Koumkui.

It may be proper to remark, that although the distinction of *winter* course is given, because it is *more frequently swoln*, at that season, than at others; yet that it may be supposed to join at Kalifatli, *at any season*, when in a *swoln* state. See above, page 43.

To conclude the present article, it may be said, that no other line of direction of the *Scamander*, than that towards *Rhæteum*, can be conceived to have taken place, in the time of Homer, consistently with the transactions recorded in the *Iliad*; since it intervened between the Greek camp and Troy: and admitting that course, all appears consistent, in respect of the present article. Experience so fully proves the wandering of rivers, through their own alluvions, that it is unnecessary to dwell on the subject in this place. And Mr. Gell actually describes a number of *deserted* channels of rivers, and beds of lakes in the quarter just spoken of; the former of which pointed towards *Rhæteum* (Troy, page 40). And he expresses his opinion, that such must have been the ancient course of the river.

Mr. Gell also (page 42) quotes Sophocles (in *Ajax*) as mani-

festing a belief that the *Scamander* ran near the quarter of Ajax—and indeed the exclamation of that hero, “O! neighbouring streams of *Scamander*, kindly propitious to the Greeks!” does certainly lead to a conclusion, that Sophocles, either from a careful examination of the story of the *Iliad*, or from a received tradition, believed that the *Scamander* ran by the quarter of Ajax; that is, of course, by the *left*, or eastern side of the Grecian fortification.

<sup>2</sup> Dr. Gillies.

## SECTION V.

THE THROSMOS, OR RISE OF THE PLAIN, ABOVE THE  
SEA BEACH.

*The term Throsmos differently understood—appears to mean the ascent from the Sea Beach, to the Plain.—Position of the Trojan Line on the Throsmos; and extending thence, into the Valley of Thymbra.*

THE Trojans, after the second battle (lib. viii. v. 213),<sup>r</sup> having driven the Greeks from the Plain before Troy, and compelled them to take shelter behind their wall; meditated an attack on that, and on the fleet, the next morning; and for this purpose, they took post so near, as to be *within hearing* of the Grecian camp: of course, it may be concluded, that it was within the distance of five or six hundred yards. And, in this position, they were said to be encamped on the THROSMOS;<sup>s</sup> understood to mean the rise of the Plain, or the *step up* from the sea beach, to the country within: as they were also said to have been “*beside the ships.*”<sup>t</sup>

<sup>r</sup> Cowper, v. 242.

<sup>s</sup> — “*opposite, on the rising ground, appear’d*  
The Trojans.” Lib. xi. v. 56: Cowper, v. 68.  
And this is repeated, in xx. v. 3: Cowper, v. 3.

<sup>t</sup> Lib. x. v. 160.

— “*on the rising ground beside the ships,*  
Our num’rous foes still menace us.” Cowper, v. 188.

There are different opinions amongst the learned, respecting the precise meaning of the term THROSMOS, as applied on this occasion.\* Some have supposed it to mean a *lofty mound*, rising from the midst of the Plain; whilst Mr. Gell takes it for the *heights of Sigæum*; which extend along the coast of the *Ægean Sea*. As the Trojans, calculated at 50,000, were encamped ON the THROSMOS, the former opinion, consequently, must be erroneous; and Mr. Gell's right, as to *the nature of the thing*. But the heights of *Sigæum* seem, from their *position*, to be ill adapted to the service of blockading and watching the Greeks, for the purposes intended: because they were not only *too remote* from, but also *oblique* to, the position of the Greek line; being nearly parallel to the course of the Mender.

The *Throsmos* must surely mean the *first rising*, or *step*, of the ground, from the beach of the sea; which appears to have been *shelving*, by what is said concerning the disposition of the rows of ships: and the edge of the Plain beyond it, would be to the Greeks on the beach, a *rising ground*.

\* The word THROSMOS is well known to be derived from *Throsko*, to *leap*, or *leap up*. (Dr. Gillies.) It appears to mean an elevated spot of any kind above the general level; short of what may properly be termed a *hill*. In effect, a *rising ground*: and in the present case, may mean the *step up*, or *sudden rise* of the Plain, above the sea beach.

Mr. Heyne was very near it, when he said, "The Trojans had taken post on the field of battle, which had an *acclivity towards Troy*." (Edinburgh Trans. Vol. iv. p. 105.

\* "*Line above line ascending*." (Lib. xiv. v. 35 : Cowper, v. 41.)

And

———— "the barks which landing first  
Were station'd *highest* on the *shelving* shore."—

(Lib. xv. v. 653 : Cowper, v. 770.)

And as it must have been of course, parallel to the shore of the Bay, it would afford a very proper position for an army employed in watching another, in such a position, with a view to an almost immediate attack. Nor does Mr. Gell's expression of "*dead flat*," on which the village and Tumulus of Koum-kui are said to stand,<sup>y</sup> at all combat this idea: for the first *rise*, or *step*, up from the beach, was undoubtedly between the *Tumulus* of Koum-kui and the margin of the sea. But even had the ground been perfectly flat, throughout, the *position* in question, would have been the fittest for the purpose of the Trojans.

It appears then, that the position of the Trojan line of encampment on the *Throsmos*, was within hearing of the Grecian camp:<sup>z</sup> also, that the same line must have approached very near to the Tomb of Ilus:<sup>a</sup> which Tomb was also close to the bank of the Scamander.<sup>b</sup> Moreover, that the Trojan camp, which thus occupied the *Throsmos*, lay between the Grecian wall, and the Scamander.<sup>c</sup> That Hector's attack was on the *left* of the Grecian camp, and also *by* the Scamander;<sup>d</sup> which river must therefore have ran on the left, (or to the eastward) of the Greeks. And as they would scarcely have taken a *torrent bed* of that magnitude and description, *into* their camp, it may reasonably be inferred, that they covered their left flank with it. (See again the

<sup>y</sup> See above, page 83.

<sup>z</sup> Iliad, lib. x. v. 14: Cowper, v. 13.

Agamemnon "heard pipes, and recorders, and the hum of war."

<sup>a</sup> Lib. viii. v. 490: Cowper, 563. And lib. x. v. 415: Cowper, 473.

<sup>b</sup> See above, page 88.

<sup>c</sup> Lib. viii. v. 556: Cowper, v. 644.

<sup>d</sup> See above, page 87, *et seq.*

Map, N<sup>o</sup>. II.) And, on the other hand, it is equally probable, that the Trojans, on the like principle, would not have taken their position, in such a way, as to allow the river to *divide* their *national* army;<sup>e</sup> or even to separate any part of it, from an enemy whom they meant to attack at day-break. And this would agree with the text; which says, that “the Trojan camp lay between the Grecian wall and the *Scamander*.” It may therefore be concluded that the right flank of the *national* army of Troy, was also covered by the left bank of the *Scamander*; having the *ford*, and the Tomb of *Ilus* in the rear of the camp: but possibly, little farther distant from it, than the breadth of the river bed.

If then it be admitted, that the *Tumulus* at Koum-kui answers to that of *ILUS*, the Trojan line on the *Throsmos* may be supposed to have ranged below it; with the auxiliaries extending on a continuation of the same line, eastward, into the Valley of *Thymbra*; and thence to the margin of the sea, within *Rhæteum*; the Bay, at that time, it may be supposed, approaching, or even entering the mouth of the valley. That the auxiliaries were there posted, is learnt from the report of Dolon; who places the *Mæonians*, *Phrygians*, and *Lycians*, there; and the *Carians*, by the *sea-side*.<sup>f</sup> And it may be conceived that, on the other hand, the Trojan line extended westward, to the foot of the high land of *Sigæum*: thus embracing the whole *front* of the Greeks; as well as their *flanks*.

<sup>e</sup> Used in contradistinction to the auxiliaries; who, according to Dolon, occupied the Valley of *Thymbra*, &c. and consequently, were beyond the *Scamander*.

<sup>f</sup> *Iliad*, lib. x. v. 426: Cowper, v. 488.

We are concerned thus to differ from some of our friends, who have fixed the Trojan encampment, along the high land of *Sigæum*; which they regard as the *Throsmos* of Homer. But it is to be considered, what the object of the Trojans was, in taking a position on the *Throsmos*. They had driven their enemy off the field, and cooped him up, in his defective intrenchments: and were only waiting the return of day, to storm them, and destroy the fleet within. They were, moreover, watching the motions of the Greeks; that they might be enabled to fall suddenly upon them, if they attempted to launch their vessels; for such was the declared purpose of Hector,<sup>s</sup> (and which gave rise to the fears of Ulysses, expressed to Agamemnon);<sup>h</sup> consequently, it was necessary, that the Trojans should take a position very near. Now, the high land of *Sigæum* (Jenishehr) not only extended in a direction, which was by no means parallel to the front of the Greeks; but also *lay far beyond their right*: and must have been from a mile, to a mile and quarter distant from the wall. It was therefore ill suited to the purposes, either of watching them, or of attacking them suddenly. But the rise of the Plain, in front, (or the *step up* from the

<sup>s</sup> Lib. viii. v. 510.

“ Illume the skies; lest even in the night,

Launching, they mount the billows, and escape.” (Cowper, v. 585.)

And, v. 530.

——— “ arming with the morrow, at their ships

Give them brisk onset.” (Cowper, v. 609.)

<sup>h</sup> Lib. xiv. v. 100.

——— “ For while they draw

Their gallies seaward, thither will they look,

Nor check the foe, nor heed the battle more.” (Cowper, v. 114.)

beach), afforded a *parallel position*; which was the most proper, and advantageous, in every point of view.

It may also be said, that the Greeks were *closely pursued* to their wall, before the Trojans formed their camp: also that it is repeatedly said, that the latter were encamped *opposite to the wall*: and finally, that after the defeat of the Trojans in the third battle, which was fought *on the Throsmos*; they were pursued from thence, “*through the middle of the Plain, beside the Sepulchre of Ilus,*”<sup>1</sup> &c. seeking to regain the town.

Thus much may be said for the *probability* of what we have contended for. Nor would the position of *Sigæum* agree with the *history*: for the Trojan camp lay “*between the wall and the Scamander;*” and also “*near the ships.*” This cannot be reconciled to a position, along the high land of *Sigæum* let the course of the Scamander be where it might: not to mention, that the term *Throsmos* means, if we are rightly informed, a LEAP; or perhaps here, a STEP up, from the beach: not a *hill*.

<sup>1</sup> Probably, because the fords of the river were in that quarter: as appears by the journey of Priam, lib. xxiv, v. 349, and 693: Cowper, v. 439; and 867. And also, by the circumstance of Hector being carried thither, in lib. xiv, v. 434. (See note to page 59.)

## SECTION III.

## CONCERNING THE TUMULUS OF ÆSYETES.

Udjek-Tepe or Tumulus, *entirely out of the question, as being too far distant, and not within the Plain; as Demetrius describes that of Æsyetes to be—Supposed to be that, at the former conflux of the Mender and Bounarbashi Rivers—Two Tumuli recently discovered by Dr. Clarke.*

No *Tumulus* is found in the position assigned by Demetrius (Strabo, p. 599), at 5 stadia from *New Ilium*, on the road to *Alexandria Troas*.<sup>k</sup>

It appears evident, from the story, that, wheresoever Polites stood, to reconnoitre the Grecian army, he must have been exposed to the hazard of being cut off from Troy by the Greeks; otherwise, he could not be said to have trusted to his "*superior speed*" for his escape.<sup>l</sup> This then, bespeaks a situation, *at least* as far from Troy, as was the Grecian camp: which description, combined with the circumstance of *a proper distance for viewing his object* (a particular that does not seem to have been attended to, by some of the commentators), appears to us, to be applicable to no other *known Tumulus*, than that, at the ancient conflux of

<sup>k</sup> This was written, previous to the publication of Dr. Clarke's second volume.

<sup>l</sup> It is said, *Iliad*, lib. ii. v. 791, *et seq.* that "Priam's son, Polites, who, trusting to his swiftness of foot, sat as *scout* for the Trojans, on the top of the Tomb of Old Æsyetes; watching when the Greeks would *advance to battle from their ships.*"

the Mender and Bounarbashi Rivers: <sup>m</sup> the *Ilus* monument of Mr. Gell. But this is from 15 to 18 stadia, instead of 5, from New Ilium; and does not lie in the direct road to *Alexandria Troas*.

It appears altogether extraordinary that Udjek Tepe should ever have been fixed on, for the Tumulus of Æsyetes. It is from 5 to 6 miles from the site of the Grecian camp. What could be seen from thence; and before the invention of telescopes? And had Troy been at Bounarbashi, as this system supposes, the person employed to reconnoitre had 3 miles less to run, than his pursuers. A man could not be said to be in danger of being overtaken, who had the start of his pursuers by 2 or 3 miles: and had not more than twice that distance to run.

It may be added, that, although an army might have been visible from Udjek Tepe, yet that a single individual was too small an object to be seen from the army.

The ideas of Demetrius were very different. He speaks of the *Tumulus* of Æsyetes, as being, in common with those of *Ilus*, and *Myrinna*, situated WITHIN the PLAIN OF TROY (Strabo, page 597): whereas Udjek Tepe is on the HILLS that shut up the Plain on the south: which is, surely, as different from the text of Strabo, as its position is in every respect improbable.

The Tumulus at the former conflux of the Mender and Bounarbashi Rivers, may have been about a mile and quarter from the Grecian wall: which was not an inconvenient distance, from whence to observe, with the *naked eye*,

<sup>m</sup> That is, the place where the conflux *was*, before the turning of the Bounarbashi River from its former course, into the *Ægean* Sea.

the order and motions of a line of troops: For, one of the objects may probably have been, to ascertain whether or not, Achilles marched with the army to the first battle; a matter of great importance to the Trojans, to know.

One does not comprehend why there should have been a necessity for Polites to expose either his person, or the knowledge of his being present, if the object was completed by a personal communication of his intelligence. It is therefore to be suspected, that the person employed to reconnoitre, was in the first instance, *to make signals*, either to the Citadel of Troy, *direct*; or to some point, from whence they were *repeated* to Troy.

It may not be improper to observe, that the position of the Tumulus at the conflux, is such, as to command a *full view* of the coast of the Bay of the Mender: so that the Grecian line would have been *open to the view*, throughout its whole extent. (See N<sup>o</sup>. II.)

---

\* \* Of the two *Tumuli* seen by Dr. Clarke, one, as we have remarked (page 86), commands a view of the Bay of the *Scamander*. Not only the objection stated, against the probability of Udjek being the *Tumulus* of *Æsyetes*, holds in this case; (*viz.*) that no hazard could be incurred, by reason of its being so much nearer to Troy; but the line of view from it, would have been nearly that of the direction of the Grecian line of battle: so that the *parts* of that line, could not be *separated*, by reason of the *fore-shortening*.

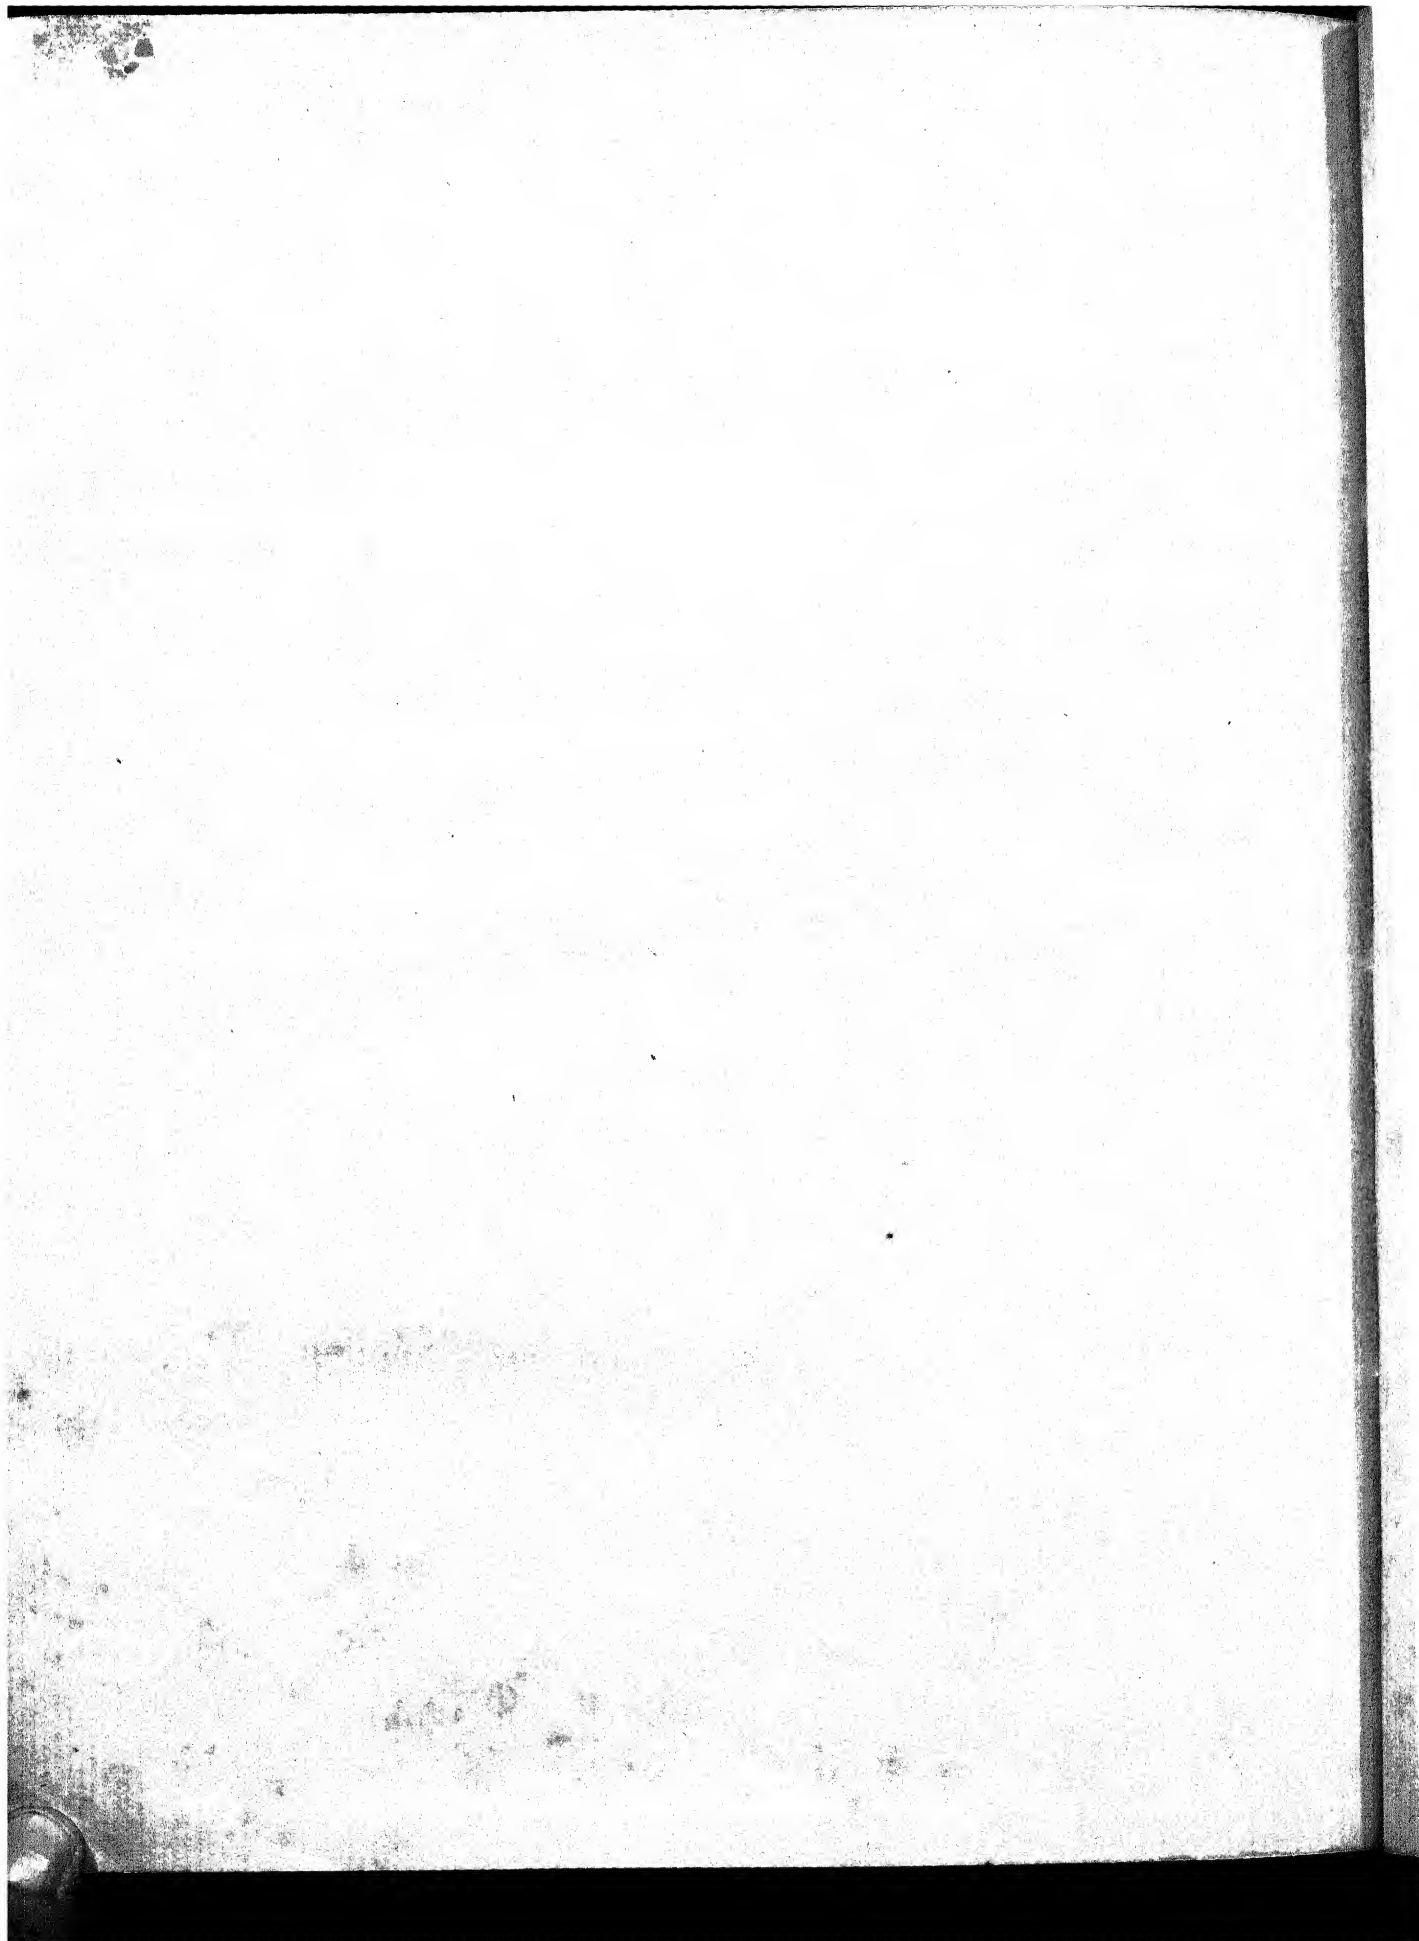

It must however be admitted, that the *Tumulus* seen by Dr. Clarke, appears to agree nearly with Strabo's distance

from New Ilium. But it is worthy of remark, that the Monument of Æsyetes is never mentioned, but on occasion of Polites' exploring the Grecian camp; and therefore cannot be supposed to have lain in the way of the armies, during their warfare; as that seen by Dr. Clarke certainly may. (See the Maps, N<sup>o</sup>. I. and II.)

## PART III.

---

CONCERNING WHAT MAY BE COLLECTED FROM THE  
ANCIENTS, POSTERIOR TO THE TIME OF HOMER,  
RESPECTING THE SITE OF TROY, THE FIELDS  
OF BATTLE, &c.

## PART III.

## SECTION I.

CONCERNING WHAT MAY BE COLLECTED FROM THE  
 ANCIENTS RESPECTING THE SITE OF ANCIENT TROY.

*The Pagus Iliensium supposed by Demetrius to have stood on a part of the ANCIENT TROY or ILIUM—Placed on his Authority—The Tumulus taken for that of Myrinna, accords with this System—Troy, (the Pergama excepted) said to have been situated in a Plain—Temples of Apollo, in the Valley of Thymbra—One of them lately discovered by Messrs. Francklin and Hope—Bounarbashi too far distant from the Sea, to answer to Troy ;—which is proved to have been much nearer, by the Events of the third Battle : as also, by certain Transactions of the Trojans, whilst encamped on the Throsmos.*

It has been stated, that the Ancients, even before the time of the Augustan age, did not pretend to fix the *exact site* of Troy : but only pointed out that of the *Pagus Iliensium* ; which Demetrius says,<sup>a</sup> was *thought* to stand on a part of the site of Ancient Troy : in other words, that a *village* stood on a part of the same ground, which the *City* of the *same name* formerly occupied ; the like of which has happened in other places. But in the recital of Demetrius,

<sup>a</sup> Strabo, pages 593, 597

there are certain particulars, which seem to shew that the *general site* must have been known. "We are shewn," says he, "the *Erineus*, *Myrinna*, and Barrow of *Ilus*." Now the *Erineus* is known to have *adjoined* to the walls:° and the Tomb of *Myrinna* stood before, and at no great distance from the *Scæan Gate*.<sup>p</sup>

*New Ilium*, or the Ilium of the days of Demetrius, and of Strabo, has been already placed (page 41) on a hill about a mile to the S. E. of Koum-kui; and on the south side of the entrance of the Valley of Thymbrek, or *Thymbra*.

The *Pagus Iliensium* was 30 stadia higher up the country, towards the *east*, and *Mount Ida*; (Strabo, p. 593); 10 short of the *Kalli-colone*, or *beautiful hill*, said to be near the *Simoïs*: and to which, the hill of Atchekui (with the exception of its being rather too far from the river<sup>q</sup>), appears to answer, in position and description. For it being a little short of  $4\frac{3}{4}$  British miles from that side of New Ilium, towards the mouth of the Mender, the distance may be taken at 47 to 48 stades of the scale of Strabo: and allowing 7 or 8 for the extent of New Ilium, eastward; the 40 stades given between that *City* and the *Kalli-colone*, will be made out.

Forty stades are *also* given, in *one line of distance*, between

° Iliad, lib. vi. v. 433: Cowper, v. 486.

One must conceive the *Erineus* to have been a rising ground, or swell, which *adjoined* in one part of its extent, to the city wall; and rendered the access to it less difficult. Some beech trees growing on it, appear to have given it the name. It seems to have extended to some distance from Troy; as it was passed in the way from the Grecian camp to the *Scæan Gate*. It may have been a continuation of the swell described in page 39.

<sup>p</sup> Iliad, lib. iii. v. 144: Cowper, v. 179.

<sup>q</sup> See above, page 46.

New Ilium and the *Kalli-colone*, in Strabo, page 598; confirming the other statement of 30 and 10, in *two* lines. So that *New Ilium*, the *Pagus Iliensium*, and the *Kalli-colone*, should all three have lain nearly in a direct line; and that line pointing *eastward* from New Ilium; or towards *Ida*.<sup>r</sup>

It is not, however, pretended, that the *site* of the *Pagus Iliensium* can be ascertained. It may be sufficient to the purpose, that the distance between New Ilium and Atchekui, the supposed *Kalli colone*, agrees in the gross: and then to consider the general site of the *Pagus*, as being about ten stadia from Atchekui, in the direction of *New Ilium*.

Mr. Gell, in his Book, page 90, and View, N°. xxxiii, from Bounarbashi, points out a hill, which accords with the supposed situation of the *Pagus*: it is seen at the left extremity of the plate; and in the back ground. The hill itself appears in the view, to be such a one, as might have borne on its summit, a Citadel or *Pergama*; such as is described to have been in, or adjacent to, Ancient Troy: and indeed, it appears probable, that the *Iliens* would have secured to themselves the possession of the site of the *Pergama*, as a post, strong by its natural defences.

The hill in question is placed on the Map, N°. I., by the process described in the note, at the foot of the page.<sup>s</sup> And

<sup>r</sup> By the Topography, one must consider it to be more *south-eastward* than *eastward*. These niceties are often disregarded in modern, as well as in ancient descriptions. *Winter-east* is a term sometimes employed by the Ancients: and would suit the present case.

<sup>s</sup> From the *Tumulus* over Bounarbashi, the angle was measured between Atchekui, and the hill in question: and this was intersected by a *cross bearing*

in this position, its base may approach within 10 or 12 stades of that of the hill of Atchekui :<sup>t</sup> and may be five, or less, from the River Shimar, the supposed *Simoïs*.

The distance from the foot of the supposed hill of the *Pagus*, to the *Tumulus* in the Plain, taken by Mr. Gell, for that of *Myrinna*,<sup>u</sup> is about a mile and half : and to the bank of the Mender may be somewhat more. So that, admitting the *Pergama* of Troy, to have been situated on the hill, in question ; the *City* may well have extended from the foot of that hill, across the Plain, to the neighbourhood of the Mender (*Scamander*) : having, in that case, the just mentioned *Tumulus* lying before it ; as the Poet says of that of Myrinna ; where Hector drew up his army, previous to the first battle, in the second Book of the *Iliad* :<sup>x</sup> according to which sup-

from Kalifatli. Both of these were measured on Mr. Gell's Map, No. XLV, with the aid also of the View, N<sup>o</sup>. xxxiii.

First, however, the bearing of Atchekui was corrected, in a small degree, by a line from the before-mentioned Tumulus to the Asian Castle (of *Abydus*) : for all the three appear to lie very nearly in one line, of N<sup>o</sup>. 13 $\frac{1}{4}$  E : Mr. Gell's being a trifle different ; or N. 16 E.

<sup>t</sup> The distance of Atchekui from Bounarbashi has also undergone some correction ; by which it is placed somewhat farther off, than Mr. Gell allows ; but which agrees better with M. Kauffer. The correction is founded on Mr. Carlyle's proportion of the time, employed between Thymbrek-kui and Bounarbashi, which was 2 $\frac{1}{2}$  hours. Out of this interval, 65. min. were employed between Atchekui and Bounarbashi ; equal to 2 $\frac{1}{2}$  miles of Mr. Gell's scale (which has been followed, in the gross). This correction is borne out by the calculation of Captain Francklin.

<sup>u</sup> See above, page 40.

<sup>x</sup> The people of Kalifatli, a village situated within a mile and half of this *Tumulus*, have an idea that their village stands on a part of the site of *Ancient Troy*. (Gell's *Troy*, page 57.)

position, the City of Troy would have occupied the middle space between the *Simois* and the *Scamander*; and approached within half a mile of either.

That the City, at large, stood in a Plain, we are told by Homer (*Iliad* xx. v. 215): Æneas, speaking of times, previous to its foundation, says, "Ilium had not yet been reared, in the *Plain*." Strabo speaks to the same effect, in pages 592, and 593. But if the ground at Bounarbashi be examined, it will be found, that the *whole* site of the supposed Troy of M. Chevalier, is *hilly*, for nearly a mile and half from the *Pergama*, to the place of his *Scæan* Gate. Nor can a *Kalli-colone* be found at 10 stadia from it, in the quarter opposite to New Ilium; as the description requires.

Dr. Dallaway saw on a hill, at the distance of an hour and half of travelling, short of Bounarbashi Hill, some columns of a *very ancient* form. The position answers to that of the ruins of a temple marked by M. Kauffer, at about a mile and half to the S. E.-ward of Chiblak; on the edge of the great Plain of the Mender, and very close to the hill of the *supposed Pergama*.

The hill of Atchekui, if allowed to be the *Kalli-colone*; as Dr. Chandler, Mr. Gell, and M. de Chevalier suppose,

† Homer says, "He (Dardanus) built *Dardania*: for SACRED ILIUM had not yet been reared, in the Plain; the city of *many-languaged* men." *Ilium* should seem to have been one of those sacred *emporia*, where men speaking different languages, traded safely under the protection of temples. (Dr. Gillies.)

---

\*. The Author begs leave to refer the Reader to Dr. Gillies's History of the World, from the reign of Alexander to that of Augustus, Vol. I. page 68, *et seq.* where the subject of this highly ancient commerce is treated at large.

and as appearances seem to warrant; (see above, page 45) affords no contemptible evidence, towards a proof that the *Pagus Iliensium* stood where Mr. Gell supposes; and that the Tumulus below it, stood in the Plain of Troy; and was the *Myrinna*, or *Batiæa*. Both the beautiful hill and the *Tumulus*, to agree with the history, must have stood between the *Scamander* and *Simoïs*.<sup>2</sup>

The Valley of *Thymbra* is said by Strabo, (p. 598) to have been near Troy. This, however, can only be meant *generally*. The supposed Hill of the *Pagus* is more than two miles from the Valley of Thymbrek (i. e. *Thymbra*); but certainly about twice that distance from the supposed *Pergama*, over Bounarbashi.

Strabo also says, in the same page, that the Temple of Apollo *Thymbraeus* was 50 stadia from *New Ilium*. The ruins of a great and magnificent temple, are found near Kalil-Eli; and are universally thought to be those of the temple in question: but they are not more than 10 stadia from the nearest part of the site of New Ilium.

Capt. Francklin and Mr. Philip Hope, after visiting these ruins, saw the ruins of another temple, at 4 miles higher up the Valley of Thymbrek: and at one mile beyond, (or to the Eastward of) Thymbrek-kui, or the Village of Thymbrek. Captain F. says, that it was situated in a grove of stately firs: and “was formerly a temple of superb and beautiful architecture of the *Doric* order; which appears from the numerous fragments of columns, capitals, and

<sup>2</sup> Messrs. Hope and Francklin saw, at Atchekui, two columns of “gray granite, of an order unknown, and very ancient.”

“ pedestals of the finest Parian marble. It is called by the natives, *Thymbrek Muzarlik*; or Cemetery of Thymbrek.” (Francklin’s Tour, pages 11 and 12.)

The position of this temple agrees with Strabo’s distance of 50 stadia from *New Ilium*: and it is, perhaps, the very temple intended by him. The other may have been built posterior to the time of Demetrius (from whose description, Strabo probably spoke; as in most other places); and during the season, when the Romans were so besotted with their supposed Trojan origin. It would be worth the attention of future travellers, to examine the style of the two masses of ruins; with a view to ascertain their antiquity; and whether the most retired, is not the most ancient of the two:

Captain Francklin says, that most of the columns at Kalil-Eli, were *Corinthian*, (pages 8 and 9): but M. de Chevalier says, *Doric*; with *scattered* capitals of *Corinthian*. Who shall decide! The original temple, from whence Apollo derived his name of THYMBRÆUS, must needs have been very ancient, and before the date of the Corinthian order.\*

To return to the subject of the position of Troy, and that of the supposed *Pagus Iliensium*.—It may perhaps be objected, that the springs which arose before the *Scæan* Gate, are wanting. To this it may be answered, that the ground,

\* Dr. Clarke’s account of the ruins near Kalil-Eli, (Vol. II. page 84), is subjoined; but it does not remove the doubt, altogether.

“ The ruins we found, were rather the remains of ten temples, than of one.  
 “ The earth, to a considerable distance, was covered by subverted and broken  
 “ columns of marble, granite, and of every order in architecture. *Doric, Ionic,*  
 “ and *Corinthian* capitals, lay dispersed in all directions: and some of these  
 “ were of great beauty.”

on that side, has not been sufficiently examined, to know whether there are, or are not, any springs, in the situation alluded to: and that Strabo (page 602) speaks of a *cold* spring, which, it appears, would have answered the purpose, had there been also a *hot* one near it. And he certainly looked for Troy in this quarter. But, in a country so subject to earthquakes, springs are often destroyed in one place, and break out in another. Nothing, perhaps, is so easily destroyed by an earthquake, as the locality of a spring.

In the next place, we shall enquire, how far the distance of Troy, from the Camp of the Greeks, collected from the transactions in the Iliad, agrees with the actual topography before us. If we are to conclude, as appears reasonable, that Homer meant to represent the *bulk* of the *individuals* of the contending armies, as possessing in mind, as well as in body, no more than the ordinary powers of men; <sup>b</sup> it will be found, that the great excess in point of *distance*, that must have been marched over, in a given time, by the armies (if we follow M. de Chevalier's system) presents a difficulty equal to any that has yet occurred.

It ought, doubtless, to be expected, that the Poet should be as consistent in this matter, as in any other part of his subject. Had he, for instance, described such an extent of

<sup>b</sup> That such they were meant to be represented, appears certain, from more than one passage in the Iliad. As when (in lib. xiv. v. 100: Cowper, 114,) Ulysses expresses his fears to Agamemnon, respecting the conduct of the troops, in the event of a precipitate retreat, from the Trojan shores. And again (in xxiv. v. 454: Cowper, v. 566), where the strength of three Grecians was required to move the bar of Achilles's tent (or rather hut) door; but which *he* was in the habit of moving by the means of his own personal strength.

ground marched over, in a given time, as is nearly double that, to which the powers of men are equal; the *military critics*, at least, would not have suffered such an inconsistency to pass: and he was doubtless aware, as we have before remarked, that the ground, and the principal positions in it, were known to the well-informed part of his readers.

Now, had one of those military critics been shewn the hills of Bounarbashi, for the site of Troy, would he not have regretted the want of judgment in the Poet, who should have admitted so glaring an inconsistency, in one of the marked features of the history of the war. For the fact is, that the *Scæan* Gate of M. de Chevalier, is full 7 British miles in a *straight* line from the site of the Grecian wall: and on the days on which Hector assaulted it, the ground in question was *four times* marched over: that is, the Grecians twice repulsed the Trojans from their wall, to Troy; and were as often beaten back. So that the ground gone over, was full 28 miles in a *right line*; and certainly 30 at the very least, if not 32: by the road.\*

The great battle on the *Throsmos*, when the Greeks sallied from their rampart, early in the morning, was not decided

* M. de Chevalier's Map, has	-	-	7½ British miles.
Mr. Gell's	-	-	7
Mr. Kauffer's	-	-	7

Mean, over 7, in a *direct line*.

Mr. Hawkins, Dr. Sibthorpe, and Captain Francklin, severally estimate the distance between the sea at Koumkala, and Bounarbashi, at 9 miles; which would give much the same result from the supposed site of the rampart. M. de Chevalier says 4 leagues. (Troy, page 116.)

till the hour of noon :<sup>d</sup> and the whole operations of the day, great and important as they were, ended before sunset.<sup>e</sup> The *longest day* in that parallel has only  $7\frac{1}{2}$  hours of *sun*, between noon and sunset.<sup>f</sup> This then, places the matter out of all question. For the four marches, collectively equal to 30 miles, or more, did not commence till the end of the first battle on the *Throsmos* : or at noon. Of course  $7\frac{1}{2}$  hours (taking the longest day) were not sufficient even for the *marching* of a great army in order of battle, 30 miles : and here, they are said, not only to have *marched*, but also to have *fought*, over a great part of the ground : and moreover, to have also fought thrice at the wall : once in *front* of it, the other times *within* it ; after it was taken by assault. Then a fresh attack was made by Patroclus, who *drove out* the Trojans : and after all, there was much fighting *before* Troy ; and also *before* the wall, for the body of Patroclus.

If, then, Homer be supposed to treat of battles, and marches, that were real subjects of history, Troy could not have been 7 miles and upwards, from the *ancient sea-coast* ; as M. de Chevalier's Map requires. But if the *Pagus Iliensium* stood on a part of the site of Troy, (as Demetrius supposed) the distance might have been less than 4 miles from

<sup>d</sup> See the woodman's time of dinner, in lib. xi. v. 87. Cowper, v. 107.

<sup>e</sup> Lib. xviii. v. 241 : Cowper, v. 292.

<sup>f</sup> Troy is said to have been taken exactly at the summer solstice. Twenty-nine days elapsed between the third battle, and the end of the truce for Hector's funeral. How long an interval might be required for the subsequent transactions, it is difficult to say ; but surely a *month* does not seem too long. This would bring the third battle to the latter end of April ; when the sun would be above the horizon about  $13\frac{1}{4}$  hours ; and consequently the interval between noon and sunset, would be short of 7 hours ; or strictly, 6 h. 52 min.

the Grecian wall to the *Scæan* Gate; admitting that the City extended into the Plain, towards the Tumulus, taken by Mr. Gell for that of Myrinna.<sup>s</sup> Then, the whole sum of the marches, might have been no more than 15 or 16 miles; or about an ordinary day's march, for an army: so that, after allowing a reasonable time for that service, an interval might still remain for the other transactions. But these were so numerous and important, that it must still be allowed, the interval is *short*: but here, is at least, a *possibility* of doing it; which the system of M. de Chevalier does not even admit. And, it is remarkable, that the intervals of time, on that day, are marked with unusual precision. With *the light of day*, the Greeks prepare to make the attack on the Trojans posted on the *Throsmos*: and sally forth. At *noon*, the Trojans first give way; and "*the Greeks forc'd ev'ry phalanx of the foe.*" (lib. xi. v. 90: Cowper, v. 114.) And when the *sun set*, "*the Achians ceas'd from the all-wasting labours of the war.*" (lib. xviii. v. 241. Cowper, v. 292.)

It is entertaining enough to observe how easily some have got rid of the difficulty, arising from the *great excess* in the distance; by saying that the transactions required a great extent of space: but surely, the *simple movements* described

<sup>s</sup> Or, the distance between the Camp, and the *Pagus*, may be taken in this way. Demetrius allows 6 stadia between the sea coast and New Ilium (but which we have corrected to  $8\frac{1}{2}$ ); and 30, thence to the *Pagus Iliensium*: Total  $38\frac{1}{2}$  stades. To this distance is to be added, the extent of the city of New Ilium, in that direction; for which, if 8 stadia be allowed, there will be a grand total of  $46\frac{1}{2}$ ; (or nearly  $4\frac{3}{4}$  British miles.) But as the *Scæan* Gate is the point reckoned to, in the former calculation, the supposed extent of Troy is to be deducted from the  $46\frac{1}{2}$  stades: and then, this result will be much the same as the other.

by Homer, required no more than the ordinary space which armies take to form in. Again, others reason as if large armies, in order of battle, moved with the celerity of a company of ordinary travellers.

Much stress has been laid, on the saying of Polydamus, that

“ We are remote from Troy ;”<sup>h</sup>

when they were at the Grecian wall. But, besides that the term *remote*, is *comparative*, the same phrase is made use of by Priam to Achilles, in speaking of the Forests of Ida.—“ remote from Ida :” when the distance from Troy to the mountain intended, was at most only 3 or 4 miles.

The circumstance the most in point, respecting the vicinity of Tröy to the Grecian Camp, is, perhaps, that of the quick arrival of the provisions, from Troy ; when Hector was encamped on the *Throsmos*, watching the Greeks, within their fortification. Hector says to his Trojans, “ Night has intervened, to which the Grecians owe their safety—Now therefore, take, as your necessities require, needful refreshment—“ —with dispatch, drive hither from the *city* fatted sheep “ and oxen: fetch bread from your houses ; make speedy “ purchase of wine ; and gather plenty of fuel.”

These preparations were for the *present night* ; and the order was not given till *after night fall*: probably so late as 8 o'clock, as it seems to have been about the end of April ; (See the note to page 120) ; and an attack on the Grecian Camp, intended at daybreak ; perhaps before 4 ; or in less than 7½ hours after the order was given. If, then, Bounar-

<sup>h</sup> Iliad, lib. xviii. 256 : Cowper, v. 310.

<sup>i</sup> Lib. viii. v. 497, *et seq.* Cowper, v. 573.

bashi stands on the site of Troy, fifteen miles at least (as we have shewn before), were to be gone over, out and home; in order to *collect* and *fetch* the articles of refreshment. A chief part of it consisted of sheep and oxen; some of the most *slow-paced* of animals: these were to be slaughtered, prepared, and dressed; and a needful time allowed for sacrifice, and to eat the food so prepared, Can any unbiassed person then, say, that 7 hours and half would have sufficed, to perform all this? Would it not rather have been regarded as a mockery, to be directed to "*take needful refreshment, as the night required*;" when the whole night must have passed, before it was attainable?

But the *event* clearly shews, that the place was not very far off, as the provisions arrived early; for it follows "that they arrived in large quantities from *Troy*; oxen and sheep, with store of wine and bread: and they gathered much fuel." And that subsequently, they sat watching "their numerous fires, *till day-break*."<sup>k</sup>

So that these transactions did not employ the *whole* night: since after their supper, they sat watching their fires during *the remainder of the night*. It can hardly be conceived then, that the provisions came from a place more than 7 miles distant.

Nor does this arrangement at all contradict the fact of the Trojan camp fires, on the *Throsmos*, illuminating the lofty front of Troy; so as to render it visible to Agamemnon, in the Grecian camp, or fleet, at the distance of 4 miles: and doubtless more applicable to a distance of 4, than of 7

<sup>k</sup> Iliad, lib. viii. v. 545 *et seq.*: Cowper, v. 625.

miles.<sup>1</sup> For, referring to the compartments N°. I. and II. of the Map, it will appear, that if Troy extended into the Plain, opposite to the *Tumulus* taken for that of *Myrinna*, its front, or at least, the upper part of its edifices, might well be visible to Agamemnon; especially if his tent, as may be supposed, was placed on a mound, thrown up for the purpose, as was the ancient practice: or on his ascending a ship, as he did that of Ulysses, when he harangued the army.<sup>m</sup>

Nor does this view of the City, from the Camp, although it may seem to imply a view of the camp from the city, involve any absurdity in the act of sending Polites to *reconnoitre* on a former occasion. For although the city might have been seen from a small elevation in the camp, yet the army, standing on a low beach, might not be visible from the city: or if seen, the position of its front might have been too oblique to distinguish particulars. But at the *Tumulus* at the ancient conflux of the Mender and Bounarbashi Rivers, the front of the Grecian army would have been clearly open to the view; so as to ascertain whether the

<sup>1</sup> "For cast he but his eye toward the plain  
 "Of Ilium, there, astonish'd, he beheld  
 "The city *fronted with bright fires*; and heard  
 "Pipes, and recorders, and the hum of war."—

(Lib. x. v. 10, *et seq.*: Cowper, v. 11.)

And in viii. v. 557,

\_\_\_\_\_ "those fires  
 "In prospect all of Troy."— (Cowper, v. 643.)

It must be owned that these descriptions do not seem to refer to a city at more than 7 miles off.

<sup>m</sup> Iliad, lib. viii. v. 222: Cowper, v. 256.

division of Achilles marched with the main body. (See above, page 107).

From all the above circumstances, taken together, one cannot help believing, that the ancient City of TROY, or ILIUM, stood somewhere in the quarter, between Atchekui and Kalifatli: which site must also have included, that of the *Iliean* village. But no traces of either, are recognised in these times; and even the precise site of the *Iliean* Village, is as little known at present, as that of *Ancient Ilium*, in the days of Demetrius. And indeed Lucan appears to be justified in saying, that the ruins of Troy had themselves perished before his day. Nor is it at all wonderful: since there was so vast a demand for materials for the building of other cities in its neighbourhood.<sup>a</sup>

<sup>a</sup> It would appear, that some persons have expected, from the expression of Virgil, *Æn.* ii. v. 21, that Troy should have stood *opposite* to *Tenedos*. But they are said to be *in sight* of each other, only.

## SECTION II.

CONCERNING THE PLACES OF THE FIELDS OF BATTLE,  
&c. &c.

*Alexander's Admiration of the ILIAD, seems to shew that he thought the Narrative consistent: which it could not have been, had Troy occupied the site of Bounarbashi—Remark of M. Heyne—First Battle, in front of the Scæan Gate—The fortifying of the Camp and Fleet, a probable Transaction—SECOND Battle, in the middle space, between Troy and the Camp—The Greeks suffer a defeat; and shelter themselves within their Fortification—The Trojans encamp close to them, on the Throsmos; and threaten an attack, the next Morning—Night Adventure of Ulysses and Diomed, in the Valley of Thymbra—THIRD Battle, on the Throsmos; desperate, and long continued; with alternate success—The Rampart assaulted, and carried by the Trojans: but they are finally driven out by Patroclus, who is afterwards slain before Troy; and the Trojans regain their Station on the Throsmos—Errors of modern Authors, respecting the Position of the Monument of Ilus—Mr. Pope makes five Battles of the warfare of this day—Achilles having returned to the War, the FOURTH, and last Battle is fought on the Throsmos: the Trojans are totally defeated, and driven into their City; and Hector slain.*

AFTER what has been said in the preceding Sections, it is by no means difficult to fix the places of the different fields

of battle; provided that the above positions of the Tombs of *Ilus* and *Myrinna*, as well as the courses of the *Scamander* and *Simoïs*, are admitted.

Homer having given a *real field of action*, it may be supposed that he meant to deliver as truths, the *general movements* made in and about it. And it may therefore be concluded, that, after the poem is stripped of its agency of gods; and of the poetical embellishments of human actions, that the marches and battles, and the arrangements respecting the fleet and rampart, are to be received as *general truths*: and that the Topography is in unison with the Narrative.\*

Alexander is said to have been a passionate admirer of the *Iliad*: and he had an opportunity of deciding on the spot, how far the Topography was consistent with the Narrative. Had he been shewn the site of Bounarbashi, for that of Troy, he would probably have questioned the fidelity, either of the historical part of the poem, or of his guides. It

\* Not but that the chain of transactions has doubtless been subjected to such an arrangement as would best suit the train of causes and consequences.

The Poet might find it necessary to carry one of his principal personages by a circuitous route, in order to bring about a catastrophe, after his own manner. It may be said, for instance, that Nestor (lib. xi. v. 596.) in carrying Machaon, wounded, from the *left* of the field, past the tent of Achilles on the *right*, in his way to the *centre* of the Greek camp, whilst there were other gates nearer to the centre, by which he might have entered; (Lib. vii. v. 339) appears to be done, in violation of probability: and that, for the purpose of drawing the attention of Achilles. For had Nestor entered the camp, by the *direct* road, Achilles would not have seen him: nor, of course, would have sent out Patroclus; whose sally forth, produced the chain of events, that led to the *grand catastrophe*. But after all, there may have been reasons for making the *detour*: although they do not appear in the Poem.

is not within credibility, that a person of so correct a judgment as Alexander, could have admired a poem, which contained a long history of military details, and other transactions, that could not, physically, have had an existence. What pleasure could he receive, in contemplating as subjects of history, events that could not have happened? Yet he did admire the Poem; and therefore must have found the Topography consistent: that is, Bounarbashi, surely, was not shewn him for Troy!

M. Heyne justly observes, that “to a person who knew “the Topography of the country, in the days of Homer, “nothing would be represented, which he would have recognised, and declared to be false, and erroneous; else the “effect of the Poem would be lost.” (Edin. Trans. Vol. IV. p. 79.)—“The Poet indeed is not to be a geographer; but “he must not feign any thing which contradicts the first “glance of nature; or clashes with the known accounts of “the Topography of the Country.” (page 78).

---

### *Places of the Fields of Battle.*

THE FIRST battle was fought *before* Troy: the Trojan army being marshalled at the Tomb of Myrinna, or Batiaea, which was <sup>\*</sup>said to stand in the Plain, “*in front of Ilium*;<sup>†</sup>” and so near the *Scæan* Gate, that the persons of the Grecian chiefs could be distinguished.‡ It is said that this battle was

<sup>†</sup> Iliad, lib. ii. v. 811: Cowper, v. 939. See N°. II. of the Map.

<sup>‡</sup> Lib. iii. v. 144, *et seq.*: Cowper, 179.

This is doubtless to be regarded as a poetical fiction, though a very agreeable

fought in the middle Plain, between the Rivers *Scamander* and *Simois*.<sup>r</sup> Juno and Minerva, who visit the field, descend at the place of meeting of the two rivers : and it is probable that the Poet meant to set them down very near to the place of action. One may therefore conclude, that this must refer to the *upper* conflux, near Kalifatli ; where the Shimar is said by Mr. Carlyle, to fall into the Mender, during the seasons when it is *swoln*. But the place of the conflux in ancient times, however, is not clearly described ; although one may comprehend its general position.

We should therefore place the field of the first battle, between the Village of Kalifatli, and the Tumulus above it ; taken by Mr. Gell for that of *Myrinna*. The battle ends, only in the *seventh* Book : after which, the Greeks fortify their camp and fleet.<sup>s</sup> The Reader is again referred to the compartment, N°. II. of the Map.

Here it may be proper to say a word, respecting the fact of the existence of the rampart, or wall, at the fleet ; since so important a part of the warfare happened there. Some have thought the story to be an *absolute fiction*. But why ? Could any measure be more necessary ; more easy of execution, since it was performed in a single day ; or more probable, from both these causes ? It was what would be styled in modern war, a *light field work* ; such as are hastily thrown up, on pressing emergencies.

one. For, as the Army of Troy would doubtless occupy the ground *nearest* to Troy ; that of Greece must necessarily have been *more distant* from the town, and consequently too far off, to admit of any nice discriminations of persons. The Tumulus, however, may have been very near to Troy.

<sup>r</sup> Lib. vi. v. 3.

<sup>s</sup> Lib. vii. v. 337, *et seq.*

The ancients were in the habit of fortifying their fleets, when *drawn up* on the shore; of which, frequent instances occur in history. Nearchus did so, repeatedly. At the *Port of Alexander*, he built a stone wall, and remained 24 days. And at the *Anamis River*, he made a *double* rampart and ditch. So far from considering the wall, as a fiction, it should rather be regarded as one of the most probable facts in the Poem.\*

The ease, with which it was forced by Hector, proves its defective construction, from the hasty manner of executing it. A part, on the *left*, was *very low*; and advantage was taken of it. Possibly, the soil there, was more wet and marshy than in other places; so that they soon *came to water*; and therefore could not easily get earth enough to raise it higher. (Surely, these are all probable circumstances.) And that the whole should have been obliterated, before the days of Homer, is not at all wonderful.\* The surge of the sea, alone, in rough weather (it being exposed to N. W. winds) considering how very near the margin it must have been, was sufficient to produce the effect, in the course of a very few ages.

It may be remarked, that the present course of the *lower*

\* Thucydides reasons on it, as on a supposed fact. "If (says he) they had not been superior in the field, they could not have fortified their camp." (Lib. i.)

\* Iliad, lib. xiii. v. 681, *et seq.*

———— The gallies there  
Of Ajax and Protesilaüs stood  
Updrawn above the hoary deep; the wall  
Was there of *humblest structure*. ——— (Cowper, v. 809, *et seq.*)

\* The interval is supposed to be somewhat short of 300 years.

Shimar, from the mouth of the Valley of Thymbrek, to the Mender; occupies nearly the line, which we should assign to the exterior of the rampart. (See N°. I.)

The SECOND battle<sup>†</sup> seems to have been fought in the same Plain, though not so near Troy: but rather perhaps about midway between it and the fleet; as both parties appear to have sallied forth, about the same time. The battle was soon decided; the Greeks retiring to their wall for shelter, very early; closely pursued and harassed by the Trojans; who, in the end, formed their camp on the *Thros-mos*, or Plain, above the beach, opposite to the wall, and ranging with the sepulchre of ILUS. (See N°. II.)

This position was taken (as we have before remarked) with a view to prevent the Greeks, had they been so determined, from escaping with their fleet, during the night. The *right* of the Trojan line, including the auxiliaries, extended *within* the entrance of the Valley of *Thymbra*, and terminated on the sea coast; or rather on the *Bay*; as the sea must *then* have entered much deeper into the land, than at present; and probably touched on the mouth of the Valley of *Thymbra*.<sup>‡</sup>

And here it must have been, that the night adventure of Ulysses and Diomed took place; when the *Thracian* Chief, *Rhesus*, was slain, and his horses carried off.

<sup>†</sup> Iliad, lib. viii. v. 60: Cowper, v. 66.

<sup>‡</sup> Iliad, lib. x. v. 426, *et seq.*: Cowper, v. 488. It is said that "The *Carians* were posted by the *sea*: and on the skirts of *Thymbra*, the *Mæonians*, *Phrygians*, *Lydians*, and *Mysians*."—and "farthest removed of all, on the utmost border of the camp, were the *Thracians*: newly arrived." These were doubtless the *Thracians* of the opposite *Chersonesus*.

Their track must have been along the beach, in front of the ditch, towards the Vale of *Thymbra* : so that the spy, *Dolon*, who came immediately from Hector's head quarters at *Ilus*' Monument, and was bending towards those of *Agamemnon*, in the centre of the fleet,<sup>a</sup> was very soon intercepted by the Grecian chiefs. The *Thracians* lay "*the most remote of all, on the borders of the Trojan camp ;*" and *beyond the Lycians, &c.* who were "*on the skirts of Thymbra.*"<sup>b</sup> Hence we should place the *Thracians* *within* the *Valley* of *Thymbra* ; and of course, beyond the bed of the *Scamander*. *Dolon* says, "*if ye wish to penetrate the host.*" &c. : so that to reach the *Thracians*, whose plunder had allured them, it is implied that *Ulysses* and *Dionied* *penetrated* the *first line* of troops ; which, according to *Dolon*, being composed of auxiliaries, were careless of the general welfare, and were all asleep.<sup>c</sup> (See also page 90.)

The THIRD battle was on the ground of the just mentioned encampment of the Trojan army, which ranged close to the Tomb of *Ilus*, along the *Throsmos* ; and parallel to the Grecian rampart.<sup>d</sup>

" Opposite, on the rising-ground appear'd  
 " The Trojans."—(Lib. xi. v. 56 : Cowper, v. 68.)

This third battle was the most desperate, and long con-

<sup>a</sup> *Iliad*, lib. x. v. 326 : Cowper, v. 375.

<sup>b</sup> The *Valley* of *Thymbra*, not the Town, or the Temple, is to be understood.

From circumstances, as well as from the shortness of the time they were absent, it is probable that the *Thracians* were not far up the Valley. Nor ought they indeed to have been, as they formed a part of the Trojan army.

<sup>c</sup> *Iliad*, lib. x. v. 422 : Cowper, v. 482.

<sup>d</sup> See above, page 102.

tested, of any in the *Iliad*: it lasting from day-light till noon, (See above, page 120, *et seq.*); when the Trojans gave way, and were pursued "*through the middle Plain, beside the sepulchre of Ilus, towards the fig tree,*"—seeking to regain the town.\* Then, the chance of war suddenly turning against the Greeks, they were driven back to the front of their fortification: and the Trojans took a position on their old ground, the *Throsmos*, and near to the Sepulchre of Ilus: for Paris wounded Diomed and others from behind a *pillar* or *column* of it, during the battle that followed, near the rampart. But the act of retiring of the Greeks, *within* their fortification, is not noticed. "*Podalirius in the field, maintains sharp conflict with the sons of Troy,*" in lib. xi. v. 832: but in xii. v. 40, they are said to be "*within their fleet immured.*"† (Cowper, xi. v. 1013, and xii. v. 48.)

Then follows, in the same Book, the assault of the rampart, on the left—and afterwards, much fighting, both *within*

\* *Iliad*, lib. xi. v. 166. Here it might seem as if the Sepulchre of Ilus, lay *far* in the rear of the Trojans; but the fact, as is shewn, in page 82 *et seq.* is, that it could not be far from the sea beach. And, on the other hand, the fig tree, or Erineus, was close to Troy.

One would have thought that a very slight attention to the warfare at the ships, would have enabled any person to avoid the errors that have been committed, on this occasion. Mr. Pope has placed the Monument of Ilus, *nearer* to the *town*, than to the *ships*; although the Trojan camp was close to it, and also *within hearing of the voices* of the people in the Grecian camp. (See above, page 84.

And in the notes to Cowper, we find: "This tomb was equi-distant from Troy, and the camp of the Greeks."

How was it possible to err so widely!

† The Poet no doubt meant that this, as well as many other minor circumstances, should be taken or granted.

and *without* it, during the succeeding four Books (i. e. the xiii. xiv. xv. and part of the xvi.th :) when Patroclus, at the head of the Myrmidons, finally drove out the Trojans, and pursued them home to Troy. There he is slain; and the Greeks are again beaten back to their wall (lib. xvii. and xviii.); behind which they retire (a second time the same day,) whilst the Trojans, a *third* time, occupy their old position on the *Throsmos*; as appears by the transactions of the next day. (Lib. xx. v. 3.)

——— “ opposite

“ The Trojans on the rising ground appear'd ;”

whilst the Greeks under Agamemnon, Ajax, and Achilles, were marshalled at their fleet.

So that, after this long fought and eventful day, both parties, at or before sunset, were in possession of the same ground, which they had respectively occupied in the morning.

Mr. Pope has divided the transactions of *this day*, into no less than 5 battles.\* He reckons, properly enough, the THIRD battle to have been that, fought on the *rising ground*, opposite to the ships, in the morning. But then, he makes a FOURTH battle, of the attack of the wall; the fighting at the ships a FIFTH; the attack made by Patroclus, a SIXTH; and finally a SEVENTH, for the body of Patroclus. How far this mode of arrangement is proper, may be doubted. It may rather be apprehended, that *five* battles were never fought in one day, by the same individual parties: and that these are rather *separate attacks*, constituting altogether one battle.<sup>b</sup>

\* In the arguments prefixed to the Books of the Iliad, in his translation.

<sup>b</sup> The Author is much gratified, at finding that in this opinion, as well as in

The *last* battle, and in our mode of arrangement, the FOURTH (the EIGHTH of Mr. Pope), is that, in which Achilles, after his reconciliation with Agamemnon, first appears as a warrior in the field: for hitherto, he has taken no part in the military transactions. (lib. xx.) Accordingly, the Trojans were attacked once more in their old position; from whence they were driven across, or into *the Scamander*, (which seems to have become swoln at the instant, and to have overwhelmed multitudes of them); and then along the Plain of Troy, till the remainder took shelter in the city. HECTOR alone remains without; and meets his death from ACHILLES.

most others, respecting the present subject, he has the happiness of agreeing with the learned HEYNE.

[See the *Edinb. Phil. Trans.* Vol. IV. p. 88, Literary Class.]

## SECTION III.

## CONCERNING THE TUMULUS OF HECTOR.

*The Funeral of Hector probably took place without, and not within, the City of TROY—Several Tumuli near Atchekui, not known to M. de Chevalier.—The Tumulus of Hector probably formed of Earth, not of stones; the stones being employed only in covering the funereal urn.*

MUCH has been said concerning the position and nature of the *tumulus* of Hector: whether it was situated *within* the *Pergama* of Troy, or at some distance *without* the city: and whether it was composed of earth, or of stones.

Certainly, when it is learnt from the transactions during the truce, that so vast a mass of wood, as required nine days to cut down and to transport,<sup>i</sup> was brought from *Ida*, to form a pile for burning the body of Hector; one can hardly reconcile to prudence, the measure of firing it, in a mass, within the circuit of a populous city! On *this* ground alone, one can suppose no other, than that it was placed without the city.

Concerning the exact import of the words, in which the description of the tomb is couched, it appears that the learned themselves are not agreed: some believing that a *Tumulus* of *Stones* is intended; others, that stones were *laid*

<sup>i</sup> *Iliad*, lib. xxiv, v. 778: Cowper, v. 983.

over the *Pit*, or *Sepulchre*, only ; and the *Tumulus* raised of earth, as in other cases.

The author, of course, has no pretensions to obtrude his opinion in this matter, in respect of the import of those words. A *Tumulus* of stones is certainly found, on the hill over Bounarbashi, the supposed *Pergama* of Troy ; and great stress is laid on this circumstance, as if it was decisive of the position of Troy. This, perhaps, is assuming too much ; especially as there are other *Tumuli*, between the *Mender* and the *Shimar* Rivers. For there are two *Tumuli* at about  $\frac{1}{3}$  of a mile to the eastward of Atchekui (the supposed *Kalli-colone*.) One of these is named by Mr. Carlyle, *Kana Tepe* ; by Capt. Francklin, *Anai Tepe* ; and said by him to mean "*The Tumulus of Stones*." <sup>k</sup> The other lies at a small distance to the westward of the first ; the road to Bounarbashi passing between them. And there is yet a *third*, distinctly remarked only by Mr. Carlyle and Mr. Gell, at  $\frac{2}{3}$  of a mile to the N. W. of Atchekui, or midway between it and the supposed hill of the *Pagus Iliensium*.

This latter *Tumulus* is named *Mal Tepe* <sup>l</sup> by Mr. Carlyle ; and as seen from the Hill of Bounarbashi, in Mr. Gell's XXXIst Plate (for it is doubtless the same) appears in a bold situation, near the *brow* of the elevated land, that bounds the Plain to the north, between Atchekui and the supposed Hill of the *Pagus*. <sup>m</sup>

<sup>k</sup> Page 13 of his Tour.

<sup>l</sup> *Mal-tepé* is also the name of a small hill in the road between Constantinople and *Nicomedia*, near the sea-coast. Its signification is said to be "*Hill of Riches*."

<sup>m</sup> It is seen over the top of the *ploughed hill*, on the right of the Plate, N°. XXXI. For the places of these *Tumuli* in the Map, see N°. I.

On a subject so interesting to the feelings, as every particular concerning Hector must be; where a whole city goes forth to do honour to the remains of their defender and guide: one may be allowed to go somewhat more into detail, with a view to enquire, which is the most probable, from the words of the Poet, that the Monument was *within* or *without* the city; and whether composed of *earth*, or of *stones*?

The Poet says, (lib. xxiv. v. 778, *et seq.*)<sup>a</sup> “Priam ordered the Trojans to go, and convey wood, towards the city, without fear of any ambush or onset from the Greeks. The Trojans yoked their oxen and mules to their wains, and assembled themselves before the city. Nine days they were employed in collecting a huge pyre of wood: and on the tenth morning, with many tears, they carried forth the body of bold Hector; and having placed it on the summit, set fire to the pile. When the next morning appeared, the Trojans again assembled, and completely extinguished the pyre with black wine. Hector’s brothers and companions then collected the white bones, bedewing them with their tears. The bones, involved in a covering of soft purple, they inclosed in a golden coffer, which they deposited quickly in the hollow of a deep pit, which they covered completely a-top with huge stones, and then hastily raised a mound or monument around it: the watchmen observing on all sides, lest the Greeks should rush in, before the work was completed. Having raised the mound, they returned again [to the city]; and then assembling in great numbers, feasted in Priam’s palace.”<sup>o</sup>

<sup>a</sup> Translated by Dr. Gillies.

<sup>o</sup> Dr. Chandler also read this passage in the same way: “The relics were

To us, these descriptions seem to apply to a transaction *without*, and not *within*, the walls of a populous and closely built capital. The "*carrying forth*" of the body, attended, as is implied, by the general population, could only have been into a *large open space*: and where could it be carried *forth to*, but to a place on the *outside* of the city? The population of a large city, is assembled *around a particular spot*: how could a sufficient space be found within the city; even if the difficulty of avoiding the danger of fire, from such an enormous mass of fuel, could have been got over?

Again, the stones appear to have been used only for covering the *grave*; and not in the *piling* of the *Tumulus*. They were *huge*, that is, suited to the intended purpose of securing the urn: but the *piling in haste* seems to refer to *earth*, rather than *stones*.<sup>p</sup> Moreover, it seems to have been customary in those times, to employ stones, or masonry, about the sepulchre itself, but to cover the whole with earth.

In respect of there being a number of persons on the watch, it may be observed, that had the transaction been within the city, with its whole population abroad in the streets, what need was there of greater precaution than usual? The spies or centinels, one would rather conclude, were placed in relays between Troy and the Grecian camp, to be ready to warn the people employed *without* the city,

"*secured in a pit by laying many large stones over them*: which done, the "*Barrow was thrown up hastily, and the party returned to the city.*" [MSS.]

<sup>p</sup> Obviously: because in most situations, loose stones, in such quantities, are not so readily obtained in one spot, as earth; which, in most situations, may be dug out, easily. But they might also have employed such loose stones as were to be had.

to return for its defence, if necessary. And admitting that the *Pagus Iliensium* was the *Pergama* of Troy, and *Mal Tepe*, the Tumulus in question, there would have been great need of warning; since it is situated  $\frac{2}{3}$  of a mile, beyond the *Pagus*, in respect of the Grecian camp; and the view of the approach obstructed by intermediate hills.

We shall close our remarks on this article by observing, that a *Tumulus* of stones, or rubbish, would indeed have suited the circumstances of a people, who had not the power given them by a truce, to go forth, for the purpose of collecting fuel from distant forests; for performing the rites of sepulture; and even for building the tomb.<sup>a</sup> But in possession of this power, would they not also avail themselves of the opportunity of raising such a monument as was proper to the occasion; and especially, when the customary mode of executing it, was within their power, and apparently, the most expeditious?

<sup>a</sup> *Iliad*, lib. xxiv. v. 666: Cowper, v. 832.

## SECTION IV.

## CONCLUSION.

*That the Mender and Shimar Rivers appear to be the Scamander and Simoïs of HOMER: and the space between them, of course, the SCENE of the ILIAD—That the Hill of Atchekui, appears to answer to the Kalli-colone.—That the distance of Bounarbashi, considered as TROY, is much too great, from the Sea, to accord with the history of the warfare in the Poem—That the Stream of Bounarbashi has no resemblance, in point of Character, to the Scamander of Homer—That the two Springs, pointed out at Bounarbashi, afford no contrast in their temperature; as the history requires—And, finally, that the CITY of TROY stood in a Plain; but that the entire site of Bounarbashi is hilly.*

THE Author trusts, that, by means of the notices collected from different quarters; but more particularly from Demetrius of *Scepsis*, he has impressed a conviction on the mind of the reader, that the Plain of Troy is NOT where M. de Chevalier has placed it; but on the opposite, or eastern shore of the Mender: as also, that there is no reason why the authority of Demetrius should be questioned, in this matter;

It is hoped, that it has also been shewn,

I. That the SCAMANDER, being the principal river in Homer's description, and having the character of a powerful

and impetuous *torrent*, is recognised in the MENDER River, which bears the like character: and which is joined on the east side, by a *lesser* river, of much the same description, named SHIMAR, or SIMORES: and answering to the SIMOIS of Homer. Whence, we have the MENDER and SHIMAR, for the SCAMANDER and SIMOÏS.

II. That the space between these rivers, is *the real Scene of the Iliad*, according to Demetrius; who describes it, as being divided, lengthwise, by a ridge of high land, into two unequal plains; of which, the largest, and in which most of the battles were fought, was on the side towards the *Scamander*: and such a ridge of high land is actually found; with the widest division of the plain towards the *Mender*.

III. That within the just mentioned space, between the two rivers, and at 30 stadia from *New Ilium*, towards the East and Mount Ida, was the Village of the *Ilians*; supposed to stand on a part of the site of ANCIENT TROY. And at 10 stadia beyond that, or 40 from New Ilium, on a continuation of the same line of direction, was the *Kalli-colone*, or *beautiful hill*, described by Demetrius. And that, an insulated, conical hill, known by the name of Atchekui, from a village on its summit, has been recognised by certain travellers, as agreeing, generally, in situation and description, with the *Kalli-colone*. But there are not found any tokens by which the site of the Village of the *Ilians* can be ascertained.

That by the history of the transactions in the Poem, it appears, that the *Kalli-colone* (as well as the City of Troy) should have stood in the space between the *Scamander* and the *Simois*: and the hill of Atchekui does really stand between the *Mender* and the *Shimar*.

IV. That *Tumuli* are found within the same Plain : one of which, from its position, may be taken for that of *Myrinna* or *Batiæa* ; and others for those of *Ilus* and *Æsyetes*. But no *Tumulus whatsoever* is found in the *opposite* Plain ; or that assumed by M. de Chevalier, for the Plain of Troy.

V. That the distance of Bounarbashi (considered as Troy) from the supposed site of the Grecian camp and fleet, is such, as to be utterly irreconcilable to the history of the transactions ; since large armies, must, in that case, not only have marched, in order of battle, and very often, fighting by the way ; over 30, or more miles of ground, in 7 hours and half, or less ; but also, within the same space of time, the Trojans must have assaulted and taken the Grecian wall. But that the story is consistent, if referred to the site of the Village of the *Iliæans* ; which was supposed by Demetrius, to stand on a part of the site of Troy.

VI. That the promptitude with which the cattle, sheep, and other provisions, were brought into the camp of Hector whilst watching the Greeks, to prevent their expected embarkation and flight, fully proves the vicinity of the City of Troy to that Camp ; whilst, from Bounarbashi, the provisions could not have reached them, and also have been brought into use, during the interval of time assigned in the history.

VII. That the Bounarbashi River, taken by M. de Chevalier, for the *Scamander* of HOMER, is a stream scarcely twenty feet in width, and three in depth ; and being supplied by equal and perennial springs, rising in the Plain ; and having a course of eight miles only ; cannot become at times a

*furious torrent*, like the *Scamander* of Homer, which was derived from the eastern quarter of Mount *Ida*, and had a capacity in its bed, sufficient to receive fighting parties; as well as to allow the Trojan fugitives to hide themselves. That the expression of Homer, respecting the TWO SOURCES of this river, before the *Scæan* Gate, appears to be subject to different interpretations: that is, to mean either the HEADS OF a River: OR ADJUNCTS TO a River. Moreover, that the Bounarbashi River does by no means accord in description with the *Scamander* of Demetrius, in respect of the actual geography: for this latter received into its bed, the River *Andrius*, from the quarter of *Carasena*: but the Bounarbashi River receives no adjunct stream whatsoever; nor could it, from the quarter of *Carasena*, because the course of the Mender interposes.

VIII. That the lower part of the course of the *Scamander* of Homer, intervened between the Camp of the Greeks and the City of Troy; as appears by more than one circumstance in the history of the Poem: but the course of the River of Bounarbashi, does not intervene, whether Troy be placed at the Village of Bounarbashi, or at the supposed site of the *Iliæan* village.

IX. That there is no hill whatsoever, in the Plain fixed on by M. de Chevalier, that can be taken for the *Kallicolone*: a very important fact.

X. That the Springs of Bounarbashi, howsoever imposing in respect of their appearance and accompaniments, do not present any *contrast*, in point of temperature; as must surely be looked for, from the description of the springs,

<sup>r</sup> See Mr. Gell's *Troy*, page 74, 75.

in Homer: but are *alike cold*. That there are not two, ONLY, but a considerable number of them; and all of the same temperature; which appears to be 5 or 6 degrees above the *mean temperature* of the atmosphere. That as Demetrius, who lived near the spot, *could not find the Springs intended by Homer*; and who could not but have known such remarkable ones, as those of Bounarbashi; one must conclude that he looked elsewhere, for the springs designed by Homer; and that the cold spring mentioned by Strabo, as one of the two, must have been in a different situation.

XI. And lastly, That as Ancient Troy is said to have been "*reared in the Plain*," one must conclude that the body of the city stood generally on flat ground; although it contained a *Pergama*, or citadel on a hill; and consequently a slope of ground, up to it. But the site fixed on by M. de Chevalier, between Bounarbashi Village and the River Mender, is *entirely hilly*,

## ADDENDA.

---

### I. Refers to page 60, note h.

It is not improbable, that the state in which Doctor Clarke saw the bed of the Shimar, was after a recent flood. See above, page 39, Note.

---

### II. Refers to page 61, line 6.

Mr. Gell has obligingly communicated the following remark, which was omitted in his book.

"I know of little, interesting, between the Ford of the Mender and Kalifatli, except that before you reach Kalifatli, going northward, *a bank of sand, or earth, with trees or bushes on the top, is seen on the other, or west side of the Mender.* This may have been only thrown up by the water, but it brought to my recollection the Tomb of Ilus, the Mound of the Plain, Myrinna, &c. &c. At a guess, it lies about East from Erkessi-kui.

---

### III. Refers to page 63.

Mr. Gell states, that he saw the smoke, or steam, over the source nearest Bounarbashi [the reputed warm spring];

and that the water felt warm to the touch. The other spring, which was of the like temperature, at the mouth, did not send up any steam from its reservoir.

---

IV. Refers to page 80. Note n: Omitted in place.

It may reasonably be supposed, that the Greeks, at this period, were reduced to half their original number; that is, to nearly an equality with the Trojan army, in the field. For, besides the ordinary waste of an army, engaged in active warfare, they had suffered by the ravages of a pestilence.

---

V. Refers to page 86, line 18.

The Ancients do not pretend that the sea, in the time of Homer, came within 6 stadia of the *site* of New Ilium; which is only about a quarter of a mile higher up, than is expressed in the Map, N<sup>o</sup>. II. So that even the Tumulus at Koum-kui, would still have been at some distance inland; and the one in question, much more than a mile and half.

---

VI. Refers to page 97.

“On the road between Koum-kevi, and the bridge of Koum-kale, manycavities are found, sometimes containing water, and generally pointing towards the Rhœteum Promontory. These have every resemblance to decayed channels; and if they did not originally convey the river to the sea, the use of them will not easily be discovered.

[Mr. Gell's Troy, p. 43.]

## VII. Refers to page 100.

Mr. Gell says, "I cannot help thinking, that the Tumulus which I have named from *Ilus*, would have been opposite to that wing of the Grecian army commanded by Ajax; if the Scamander ever ran, as we both suppose, by Koum-kui. Also, supposing the Scamander to have taken that course, and to have bounded the Grecian camp, I cannot conceive a better position on any eminence, than the *Throsmos*, which I have recorded (that is, a hill nearly detached from the heights of Jenishehr, projecting into the Plain; and being the cause, which turned the stream of the river, towards the Rhœtean Promontory). And surely, there was no other place so proper for watching the Greeks."

His remark on the width of the Plain, east of the River                                                                                                                                                                                                                                                                                                                                                                              |                    |

Mender, 33. Supposes the Tumulus seen by Dr. Clarke in that Plain, to be that of Myrinna or Batiaa, 40. Cited, 18, 25, 35, 45, 47, 82, 83, 84, 97, 100, 101, 106, 113, 114, 115, 119, 121, 129, 137, 144, 147. His remarks on the springs at Bounarbashi, 147 And on the *Throsmos*, 148  
 Gillies, Doctor, - 62, 98, 100, 115  
 Granicus River, springs from Cotylus, 23, 24  
 Grecian wall, or rampart, - 69, & seq.  
 Greeks, retire to their wall for protection, 131  
 — Port of. See Achæan Port.

H.

HAWKINS, Mr. 19, 24, 119. His remarks on the springs at Bounarbashi, 62, 66. Communicates a correct copy of M. Kauffer's map of the Troad to the Author. (Preface.)  
 Hayes, Captain, - 62  
 Hector, carried wounded to the ford of the Scamander, 59. Holds a council of war, at the monument of Ilius, 84, 88, 101. Attacks and forces the left of the Grecian rampart, 89, 133. Observations on his Tumulus, 136, & seq. Improbable that his body was burnt within the city. *ibid.* The Tumulus more probably of earth, than of stones, - 139, 140  
 Herodotus, his belief of the Trojan war; though not of Helen's being carried to Troy, 10, 11. Cited, - 20, 25  
 Heyne, M. his remarks, 52, 128. Mentioned, 89, 100, 135  
 Hobhouse, Mr. - 61, 66  
 Homer derives the Scamander from Ida, 24. Appears to have studied the topography on the spot, and to have given a real field of action, 51, 127. Speaks only of two rivers of the Troad, 53. His topography compared with that of Demetrius, and with the ancient topography in general, 51, & seq. His number of ships agrees very nearly with that given by Thucydides, 80. Cited throughout.  
 Hope, Mr. Philip, with Capt. Francklin, discovers the ruins of a Doric temple, in the Valley of Thymbrek, or *Thymbra*, 36, 116  
 Hunter, Doctor John, - 64, 65

X

the letter Δ 18. Path of Juno, over Lectum, 20. Opinions of Herodotus, Xenophon, and Strabo, respecting Ida, 21. Mr. Walpole's route across a part of it, 21. Le Brun's, 21. Forests of, - 122, 136  
 Ida Gargarus, 18, 19. Height of, 21. The same as Cotylus, and Kas-dagh, - 25  
 Ida Lectum, - 18, 19  
 Ida, Trojan, 18, 19. Often taken for the whole of Ida, - 20  
 Jenikui, - 93  
 Jenishehr (Sigæum), - 103  
 Iliad, the scene of, referable to no other place than the Plain of the Mender, - 2, 142  
 Iliean Village (or Pagus Iliensium), where situated, according to Demetrius, 29, 46, 111, 112. Supposed to have occupied a part of the site of ancient Troy, 111, 112, 113. Its site, not precisely known, 113, 125  
 Ilium. See Troy.  
 Ilium Recens, or New Ilium, placed, 41 & seq. Visited by Dr. Clarke, 42. Its distance from the shore, in the time of Demetrius, 72. Port of 95. Its modern name, Old Kalifatli, - 42  
 Ilius, Monument of, 28. Supposed to be the Mount at Koumkui, 82, 83. Situated in the way from Troy, to the Grecian camp, 83, 88. Trees said to grow on it, 86. Its position known to Demetrius, - 112  
 Inglis, Mr. - 39  
 In-Tepé, or Tumulus of Ajax, its position, 70  
 In Tepé Azmah, the Port of the Æantéum, 94, 96  
 Johnson, Doctor, an observation of his, 53

K.

Kalifatli, Village of, 35, 39, 40, 42, 97. Its inhabitants believe that it stands on a part of the site of Ancient Ilium, or Troy, 114  
 Kalifatli, Old, the present name of the ruins of New Ilium, - 42  
 Kalli-colone, or beautiful hill, 29. Taken for the hill of Atche-kui, 45, & seq. 112, 113, 142  
 Kana-Tepé, - 137  
 Karanlik Port, - 96  
 Kas-dagh, the modern name of Gargarus, or Cotylus, 18, 25. The highest summit of Ida, - 24  
 Kauffer, M. his map of the Troad, (Preface). Cited, 23, 24, 26, 31, 35, 47, 114, 119  
 Koum-kala, distinguished from Koum-kui, (Preface.) Mentioned, 35.

Koum-kui, 35. Its Tumulus taken for that of Ilus, 82, 83. Mr. Gell's description of it, - - 83, 84

## L.

LAKES at the mouth of the Mender River, 95  
Lectum, or southern ridge of Ida, 18, 19  
----- Promontory of, 17, 18, *et seq.* 20, 22, 25, 26  
Left, The, meant for that of the Grecian wall and camp, - - 88, *et seq.*  
Lidgex River of M. Kauffer, taken for the Andrius of Demetrius, - 31  
Lower course of the Scamander, 87, *et seq.*  
Lucan, his observation on the ruins of Ilium, 13. May probably be justified, in saying that they had perished, - 13, 125

## M.

MACKENZIE, Dr. Murdoch, describes the lower part of the course of the Shimar River, under the name of Dumbrek, 39  
Mal-Tépé, - - - 137  
Mender River, taken for the Scamander, has always been regarded as one of the two rivers that encompassed the Plain of Troy, 3. Is the Simois of M. de Chevalier, 3.  
Has its source in Kas-dagh (i. e. Gargarus or Cotylus), 24. In character, a mountain torrent, 55, 74. Breadth of its bed, 55. Its bed oftener filled, than that of the Shimar, 58. Has probably varied its course, in different ages, from one side of the Plain to the other, in the part towards the Bay, 67  
Myrinna, Tumulus of. See Batizæa.

## N.

NAUSTATHMUS, 73, 94, 95. Its distance from New Ilium, 92. Distinct from the Achæan Port, - - 92  
Neachore, - - - 93  
Nee, - - - 93  
New Ilium. See Ilium Recens.

## P.

PAGUS Iliensium. See Iliæan Village.  
Palæ Scamander (or Old Scamander) described by Pliny, - - 93, 95  
Palæ Scepsis, 22, 23. Position of, - 24

Patroclus, Tumulus of, its position, Page 70  
Pergama of Troy, - 45, 53, 113, 114  
Pliny describes the bay of the Mender, 70.  
Over-rates its dimensions, 79. Speaks of trees growing on the Tumulus of Ilus, 86.  
Describes the coast of Troas, 93. Cited, 95  
Pocock, Doctor, right in his ideas concerning Ida, 24, 25. Passes over the Mender and Shimar Rivers, 38. Mentioned, 20, 22, 32  
Polichna, probably Balonk-li, 20, 22, 32  
Polites explores the camp of the Greeks, from the Tumulus of Æsyetes, 105. A supposed object of it, - - 107  
Polydamus, a saying of his, - 122  
Pope, Mr. reckons 8 battles before Troy, 134  
Port of the Greeks. See Achæan Port.  
Priam passes the Scamander, near the Monument of Ilus, - - 88

## R.

Rampart, or wall of the Greeks. See Wall.  
Rhoeteum Promontory, its position, 70. The station of Ajax on that side, 88  
Rivers, old and new ones, of the same name, 96

## S.

Sandys, Mr. - - - 37  
Scæan Gate of Troy, 40, 43, 61, 112, 115, 119. The Tomb of Myrinna, before it, 40, 128  
Scamander, one of the two rivers that encompassed the Trojan Plain, 2. The difference of opinion respecting the place of its source, has occasioned the chief difficulty of arranging the topography of the Troad, 6. Its source in M. Cotylus, according to Demetrius, 22, 30. Course, thence to the Plain of Troy, 30. Divides Cebrenia from Scepsis, 25, 30. Has the character of an impetuous mountain torrent, 54, 55, 56. The largest of Homer's two rivers, 54. Compared with the Mender, and contrasted with the river of Bounarbashi, 55, 56. Its fords, 59. Its deserted channels, 75, 97, 148. Lower Scamander, course of, 87, *et seq.* Discharged anciently at Rhoeteum, 94, 95, 96, 97. Flowed *between* Troy and the Grecian camp, - - 91  
Scamandria, - - - 93, 95  
Scamander amnis navigabilis of Pliny, 2, 95  
Scamandrian Plain, - - 28  
Scepsis, a country, - - 31

- Scepsis, a city, the residence of Demetrius, 3, 24  
 Scepsis, Palæ, - - - 22, 23, 24  
 Shaw, Doctor, - - - 65  
 Shimar River, (or Simores) not unknown in earlier times, 32; but pointed out, anew, by Professor Carlyle, 34, *et seq.* Has distinct summer and winter courses, 35, 97. Probably the Simois of Homer, and of Demetrius, 43. A mountain torrent, like the Mender, but smaller, 57. Described by Doctor Clarke, under the name of Kalifatli River, 39, 60. And by Dr. Mackenzie, by that of Dumbrek, - 39  
 Ships, their sterns placed towards the land, 78. Arrangement of, on the beach, 78, *et seq.* Propped, and placed close to each other, side by side, 80. Number of, in Homer's catalogue, - - - 80  
 Sibthorpe, Doctor, - - - 62, 119  
 Sidon, visited by Paris and Helen, - 11  
 Sigæum, its position, 70. The Station of Achilles, on that side 88. Heights of 100. Not the Throsmos of Homer, 100, 103, 104. Mr. Gell's remark on it, - 148  
 Silver mine near the Trojan Ida, - 23  
 Simois, one of the two rivers of the Troad, 2. Has the character of a mountain torrent, like the Scamander, 57. Called on by the Scamander, to join its floods, and overwhelm Achilles, - - - 58  
 Skupchu, Eski, (or Old Skupchu; taken for Palæ Scepsis), - - - 22, 23, 24  
 Smith, Doctor, the translator of Thucydides, 10, 80  
 Sophocles (in Ajax) seems to suppose that the Scamander ran by the quarter of Ajax, 97  
 Springs, before the Scæan Gate; the warm one not to be found, 61. Those at Bounarbashi, 8 in number, and all cold, 62, 66. One of them, called the *warm* spring, very imposing in its appearance, 66. Temperature of certain deep seated springs in England, 65. Springs easily destroyed by earthquakes, 118. A steam arises from one of those, at Bounarbashi, - 147  
 Stades, different standards of, - 71  
 Station of the Grecian fleet, in the Bay of the Scamander, - - - 75, 78  
 Stoma-limne, - - - 92  
 Strabo, appears to have misconceived Demetrius, in the matter of Ida: and the place of the sources of the Scamander, *Æsepus*, and Granicus, 21, *et seq.* Has preserved the report of Demetrius, on the Plain of Troy, &c. 28. Over-rates the extent of the Bay of the Mender, or Scamander, 79. Cited, throughout.
- T.
- TEMPLES, ruins of, in the Valley of Thymbrek, - - - 116, 117  
 Throsmos, what may be supposed to be meant by the term, 99, *et seq.* The Trojans encamp on it, 131, 133. Battles on it, 132, 135. See also, - 148  
 Thucydides, believed that the war of Troy had happened, 10, 11. His statement of the number of ships, in the Grecian armament, agrees generally with that of Homer, 80  
 Thymbra Valley, and Quarter, 84, 86, 90, 91, 102, 112, 116, 131, 132. Temples, remains of, - 116, 117  
 Thymbrek Valley and Village (Thymbra), 33, 34, 36, 44, 116. Ruins of the great temple at Kalil-Eli, - 116, 117.  
 — Of the lesser temple at Thymbrek Muzarlik, - - - 36, 116, 117  
 Thymbrek River (or Dumbrek), 36, 37, 38, 44  
 Thymbrius River, - - - 35, 53, 96  
 Tragesæa, a saline, - - - 18  
 Troad, prevailing ideas respecting its topography, 1, *et seq.* Its rivers, - 2  
 Trojan Ida, or western range of Ida, towards the Plain of Troy, &c. - 18, 19  
 — Plain, described by Demetrius, 28  
 — auxiliaries, where posted, 102, 131  
 — army, forms its camp on the Throsmos, 102, 131, 133. Its object in taking that position, - 103  
 Troy, or Ilium, war of, believed by the ancients, generally, 9, 12. Its ruins had disappeared before the time of Demetrius, 13. Its supposed position, by Demetrius, 29. Plain of, where situated, 44. Stood generally in a plain, 114, 115. Bounarbashi too far from the sea, to answer to it, 118, 123. Taken, at the summer solstice, its site, probably, between Kalifatli, Tchekui, 125. Error in supposing it stood opposite Tenedos, 125  
 Tumulus of Achilles, 70. Of *Æsyetes*, 28, 105, *et seq.* Of Ajax, 70. Of Antilochus, 25, 30. Of the Greeks, 73, 76. Of Hector, 136. Of Ilus (supposed to be that at Koum-kui), 28, 82, 83. Of Kana Tepé, or Anai-Tepé, 137. Of Koum-kui, 83.

Of Mal Tepé, 137. Of Myrina or Batiaa, 28, 40, 112. Of Patroclus, 70  
 Tumuli, two discovered by Dr. Clarke, 40, 85, 107. None found in the Plain between the Mender and Bounarbashi Rivers, 143  
 Tymbrek. See Thymbrek.

## U.

Udjek Tepé, not the Tumulus of Æsyetes, 106

Ulysses, his night adventure, in company with Diomed, 90, 91, 103, 131. Expresses his fears to Agamemnon, in the event of a precipitate retreat, 103, 118

## W.

Wall of the Greeks, observations on, 129, *et seq.* The fact of its construction, pro-

bable, 130. Believed by Thucydides, 130. The Greeks retire within it, 131. Attacked and stormed by the Trojans, 133. Hastily constructed and imperfect, 130. Supposed line of its course, 131  
 Walpole, Mr. his route over Western and Southern Ida, 21  
 War of Troy, believed to have happened by Herodotus, Thucydides, the historians of Alexander, &c. &c. 8, *et seq.*

## X.

XANTHUS, another name given by Homer to the Scamander, 2, 93, 96  
 Xenophon, 20, 21, 25

## Z.

ZELBA, at the eastern foot of Ida, 17, 25
